The settlement of Santo Domingo was made by the Spaniards, the first settlement in the New World, and the greater part of the island is still occupied by a Spanish-speaking population. In 1801 the country was formally abandoned by Spain, and in 1821 the people proclaimed their country a republic, under the flag and protection of Colombia. A few years later Roger, President of Haiti, invaded the part claimed by the new republic, and the whole territory fell under his dominion. In 1844 independence was again asserted by the people on the eastern end of the island, and the Dominican Republic was established, and from that date the two political divisions of Haiti and Santo Domingo have been maintained. In 1861 the Spanish Government succeeded in re-establishing authority over Santo Domingo, but in 1865 again abandoned all claims to it. In 1871 a commission appointed by President Grant visited Domingo with a view to annexation. The question was reported favorably by the commission, and the people of the republic were willing for the change, but no action was taken by Congress.

President A. Wos-y-Gil.

The President.—General Alejandro Wos-y-Gil (1903).

The Cabinet (Provisional).—Secretary of Interior and Police, Miguel Febles; Secretary of Foreign Affairs, Fidelio Despradel; Secretary of Justice and Public Instruction, Erique Henriquez; Secretary of Finance and Commerce, R. E. Galvan; Secretary of Posts and Telegraph, Francisco Detjeen; Secretary of War and Navy, Dionisio Frias; Secretary of Agriculture and Public Works, Jose Brache.

The Government. — The legislative power is vested in a National Congress of twenty-four Deputies, chosen by direct vote, with restricted suffrage, for a term of two years. The country is divided into provinces and districts, the Governors being appointed by the President. The various communes, cantons and sections are presided over by magistrates appointed by the Governors.

The Nation.—The Dominican Republic has an estimated area of 18,045 square miles, and in 1888 the population was officially estimated at 610,000. The republic embraces the eastern portion of the island of Haiti, the western portion forming the Republic of Haiti. The population is composed chiefly of persons of Spanish descent, mixed with Indian blood of the aborigines and of mulattoes and negroes. The whites predominate and the Spanish language prevails, though in the cities French and English are spoken to some extent. The capital is Santo Domingo.

The State religion is Roman Catholic, but other forms of faith are tolerated under certain restrictions. Primary education is free and compulsory, and is supported by the communes, with aid from the central Government. There are primary, superior, technical and normal schools, and a professional school of the nature of a university. In all there are about 300 schools and about 10,000 pupils. About forty newspapers are published in the republic.

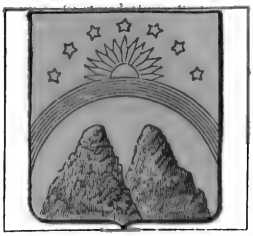
The geographical position of the Dominican Republic makes its soil and climate suitable for the production of all kinds of tropical fruits and vegetables. Differences in altitudes and soil render particular districts suitable to different branches of agricultural industry. Under certain conditions public land is granted to private citizens for farming purposes. The land is particularly well adapted for the cultivation of sugar, and this industry has shown rapid growth during the past five years, though during the last year the production has shown a decrease. The distillation of rum from the waste products has attended the growth of the sugar mills, and several of them have distilleries.

The mountain regions are well adapted to the cultivation of coffee. The highlands form one-half of the area of the island and the soil is generally very rich. The coffee industry has not developed as fast as the condition of the soil would warrant, owing to the lack of skill and industry on the part of the natives. Cacao and tobacco grow well in almost all parts of the republic, and the former is rapidly becoming one of the most important agricultural industries. Among the tropical fruits extensively cultivated are oranges, bananas, limes, citrons, pineapples, mangoes, guavas, melons, pomegranates and cocoanuts. The first shipment of bananas was made in 1889.

The forests of the republic furnish much valuable timber, not only in cabinet woods, but in cheaper material suitable for building purposes.

A railroad 130 miles long runs between Sanchez, on the Bay of Samana, to Santiago, and concessions have been granted for other railroads. The highways are generally bad.

Events in 1903. — A revolution under the leadership of General Wos-y-Gil and directed against the administration of President Vasquez began early in the year and continued until late in April. On March 28 the capital, San Domingo, was captured, and on the following day the revolutionists were practically in control of the entire island. There were continued attempts on the part of President Vasquez to retake the city and to regain control of his country, but on April 22 the Government overthrow was declared complete and a provisional government was established with General Wos-y-Gil as President. On the 27th President Vasquez abandoned his defense of the Presidency against General Wos-y-Gil and fled to Cuba, where he announced his intention of remaining and engaging in agricultural enterprises. At the election held in June to choose some one for the full Presidential term General Wos-y-Gil was elected by a large majority.



In February the Dominican Government asked an extension of time to consider the claims of the Ros and Clyde companies. These claims have been standing for several years and relate to the taking over of certain improvements made by the companies and enjoyed by the Dominican Government. United States Minister Powell had refused to allow the question to be submitted to the local courts, but insisted upon the settlement being reached through the United States Government. In September Minister Powell went to San Domingo as a commissioner to see that the terms finally agreed upon be carried out by the Dominican Government. In connection with the claims question Minister Powell succeeded in obtaining from the Dominican Government the withdrawal of the port charge, which seriously affected the interests of the Clyde steamship line.

In June a St. Louis syndicate secured a concession from the Dominican Government to develop valuable petroleum fields near Azua.

Ecuador.

—

Capital:
QUITO.

Spanish rule began in Ecuador in 1526 and continued until 1822, when the battle of Pinchinca secured the independence of the country. Ecuador was at first included in Colombia, but was constituted a separate republic May 11, 1830, when civil war broke up the plan of Simon Bolivar to have one large South American country. A Constitution was adopted and a President elected, and until 1884 the republic enjoyed a reasonably peaceable government. In 1884 another Constitution was formed, which, with modifications in 1887 and 1897, has since been in force.

The President. — General Leonidas Plaza (1901-1905); Vice-President, Freile Zaldumbide.

The Cabinet.—Secretary of Interior, Police, Public Works and Public Charity, Miguel Valverde; Secretary of Foreign Affairs, Dr. Alfredo Banquerizo; Secretary of Public Instruction, Religion and Justice, Dr. Julio Arias; Secretary of Agriculture, Dr. F. Lopez; Secretary of Finances, Juan F. Game; Secretary of War and Navy, General F. E. Alfaro.

The Government.—The President is elected for a term of four years by the direct vote of the people. The Vice-President is elected in the same way, but two years after the President, making him the member of two distinct administrations. The National Congress is composed of a Senate and a House of Deputies, the members of which are elected by popular vote of adults who can read and write. The various provinces are administered by Governors appointed by the central Government, and their subdivisions are governed by political chiefs. The Galapagos archipelago is under a local administrator. Most of the Indians are virtually in bondage.

President Plaza.

The Nation. — Ecuador has an area of about 116,000 square miles, with a population of about 400,000 inhabitants, of which about 150,000 are uncivilized Indians. The larger part of the population is Indian, and persons of pure white blood are few.

Roman Catholic is the State religion, and it is annually provided for by appropriation. Primary education is free and compulsory. There are three university bodies, nine schools for higher education, thirty-five secondary schools and 1,088 primary.

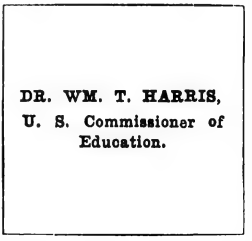
Ecuador is essentially an agricultural country, owing to its situation and the climatic conditions, but the differences of height and temperature give varied products. On the coast and along the river valleys the soil, when well cultivated, gives generous crops of cacao, coffee, tobacco, bananas, pineapples, cocoanuts, ivory nuts and sugar. In the higher regions fruits and vegetables incident to temperate and colder climates can be raised plentifully. Cacao is the chief product of Ecuador, and upon it depends much of the wealth of the country. Next in importance is sugar, which was first cultivated in 1875. Coffee grows in several localities, both on the mainland and on the islands, and its production is on the increase. Guayaquil coffee is favorably known in Europe and is used to some extent in New York. Several of the Galapagos Islands offer land well suited to its cultivation.

The cotton grown in Ecuador, especially in Imbabura Province, is of good quality and resembles "Sea Island" cotton, except that it has a coarser fiber. Excellent tobacco may be grown to advantage, and particularly in the provinces of Guayaquil, Manabi and Esmeraldas. Dye-woods are found in the forests of Ecuador, but are not exported to any large extent. A small quantity of timber is shipped from the Pacific Coast.

Ecuador abounds in gold and other metals. Mining is carried on along the Pacific slope, the eastern portion being of such a geological formation as to make it unprofitable there.

Manufacturing is carried on but slightly, and only in the larger cities, to supply immediate needs. Most of the manufactured articles used in the native industries are imported.

The roads of the country are mostly bridle paths and are barely passable at the best seasons of the year. There is one highway in an unfinished condition, and one railroad, ninety miles long, running from Duran to Alausi.



Events of 1908.—Correspondents in Ecuador, writing to American newspapers, claim that the condition of the country has been steadily receding since the election of President Leonidas Plaza, who is a comparatively young man, and probably badly advised. Former President Alfaro had begun a number of progressive reforms, introducing a liberal policy of government, separating the Church from the State, establishing free schools and in many ways encouraging commercial enterprise. Since his successor came into office the progress has ceased, and education and commerce have been allowed to retrograde. The officers of the railway, owned by British and American capital, have been subjected to petty persecutions, and in a general way an effort has apparently been made to drive out foreign business.

Since the death of Thomas Nast, the cartoonist, who was made Consul at Guayaquil, and succumbed to yellow fever shortly after reaching his post, the United States has found some difficulty in getting a representative for that town. Herman R. Dietrich, of Utica, Mo., was appointed in April, after several had been chosen, only to resign. He accepted the post. A strict quarantine was established in May against the western coast of North and South America on account of the plague in Mexico.

Alfredo Banquerizo was elected vice-president of the republic in July, but Congress refused to sustain the election until August 30.

Ecuador will occupy 10,000 square feet of space at the St. Louis Exposition.

Education in the United States.

DR. WM. T. HARRIS,
U. S. Commissioner of Education.

The Bureau of Education was established by Congress "for the purpose of collecting such statistics and facts as shall show the condition and progress of education in the several States and Territories and of diffusing such information respecting the organization and management of schools and school systems and methods of teaching as shall aid the people of the United States in the establishment and maintenance of efficient school systems and otherwise promote the cause of education throughout the country." It is placed under the charge of a commissioner, appointed by the President, who is assisted by some forty-five clerks and laborers. The bureau is placed in the Department of the Interior, and the commissioner reports directly to the Secretary. Its first function is to collect statistics and all manner of educational information, digest and tabulate the same, with such reflections and discussions as seem pertinent. The second function is to publish the statistical results and reflections and distribute them to centres

of educational information throughout the world, and to such institutions and individuals as have control and management of education. Besides printed matter there is an extensive correspondence with officials and other persons seeking educational information. All of these things, in accordance with the main purpose of the office as defined by act of Congress, relate to the collection and diffusion of information regarding education, and do not involve any authority over the management of education in the States and Territories. In accordance with the general governmental policy of the United States the purpose of the bureau is to aid local self-government in education. And this is done not by taking the control out of the hands of the people, but by collecting such information as will enable the local directors and teachers to manage their schools in the light of the experience of the whole country, and, in fact, of the whole world.

But there are certain functions added from time to time to the bureau by act of Congress differing somewhat from those described. The entire management of the Government schools in Alaska is lodged in the bureau, and a special agent appointed to take immediate charge of the schools under the general direction of the Commissioner of Education. The management of the annual apportionment of the endowment by Congress of the agricultural and mechanical colleges (under act of August 30, 1890) is also placed in charge of this bureau.

To obtain the items of information required to tabulate the statistics of schools in the United States 25 blank forms of inquiry are sent out to as many public offices and kinds of institutions. The items of information called for by these several forms of inquiry number in all 710, and the different schedules returned to be tabulated amount to 15,721. Returns for 1902 have been recently tabulated with results as follows: Pupils enrolled in the public elementary and high schools during the year, 15,925,887; the same being 20.25 per cent of the entire population, estimating the same at 78,544,816. In 1870 the number enrolled was 6,871,522; the same being 17.82 per cent of the population. In 1880 the percentage enrolled had increased somewhat, being at that time 19.67 per cent of the population. In 1890 the per cent of the total population had reached the present rate. The average daily attendance for 1902 was 10,999,273, the same being 69 per cent of the total number enrolled. This is the largest average attendance on the number enrolled ever reported in the United States. It was only 59.33 per cent in 1870. The actual number of days attended by each pupil enrolled reached 100 days, which was 22 days in excess of the school attendance for 1870. The school term for the first time in the history of the United States reached 145 days. These items and some others may be shown in the comparative table below.

Dr. Wm. T. Harris.

The total enrollment for the year, including public and private, elementary, secondary and higher education, was 17,460,000 pupils, and to this there should be an addition made for evening schools, business schools, private kindergartens, Indian schools, State schools for defectives, orphans, etc., of 620,840, making a grand total of 18,080,840 in general and special schools, public and private.

The increase of the length of the school term noted above from 132 days in the year to 145 days is due to the growth of cities and large villages. The school year includes 200 days in nearly all of the large cities, and 180 days in the majority of the villages. With the growth of cities the regular State tax for schools diminishes and the local taxation increases.

An interesting question arises as to the average amount of schooling that each individual of the population is receiving. This can be calculated from the actual number of days attended by the pupils in the public schools and the attendance at the private schools may be closely estimated. In 1870 the average schooling given to each inhabitant was 672 days, counting in all of the short periods of schooling which he may have had during the twelve years of his school age. This average increased to 792 days in 1880 and to 892 days in 1890 and to 1,032 days in 1902. The States of the North Atlantic Division have a longer period than this, amounting to 1,344 days. The South Atlantic and the South Central Division fall below, but are rapidly increasing. The South Central Division of States, for instance, had only 224 days as the average entire amount of schooling, according to the rate of attendance of the year 1870, and it had increased to 622 days in 1902. The South Atlantic average was a little more, being 246 days at the time of 1870 and 702 days in 1902. The increase of the population in number and size of cities in the South, owing to the influence of the railroad and manufacturing, has been the chief reason for this increase of the amount of schooling given on an average to each of the population, and reveals the earnestness of the South in the work of extending and perfecting its educational systems. Of the 1,032 days which are given to the average citizen of the United States, if estimated at the rate of attendance of last year, 930 days of it are furnished by the public school system, which is a larger proportion than that of 1870, in which year out of the total of 772 days only 582 days were given in the public schools.

According to a somewhat careful estimate, the total amount of schooling given to the average of the population in 1800 did not exceed 82 days, but by 1840 this had risen to 208 days. The decade ending in 1850 showed a great increase of interest in schools, owing to the labors of Horace Mann and his disciples in New England and elsewhere, and at the rate of attendance on schools in 1850 the entire population could count on 420 days each; at the rate of 1860, 434 days; in 1870, 672 days; 1880, 792 days; 1890, 892 days; 1902, 1,032 days.

THE PROGRESS OF EDUCATION.

	1870.	1880.	1890.	1900.	1902.
Length of school term in days	132	130	135	144	145
Average number of days attended by each pupil enrolled	78	81	86	99	100
Number of male teachers	77,529	122,795	125,525	126,588	122,392
Number of female teachers	122,986	163,798	238,397	296,474	317,204
Amount expended for the support of public schools	$63,396,666.00	$78,094,687.00	$140,506,715.00	$214,964,618.00	$235,208,465.00
The expenditure per capita of population	$1.64	$1.56	$2.24	$2.84	$2.99
The per cent of the amount of income from State taxes	....	....	18.4	17.2	15.4
The per cent of the amount of income from local taxes	....	....	67.9	68	68.5
Entire value of school property	....	....	$342,531,791.00	$550,069,217.00	$601,571,307.00

It will be noted that male teachers formed nearly 39 per cent of the entire number in 1870, and nearly 43 per cent in 1880, but only 34.5 per cent in 1890 and less than 28 per cent in 1902. The average monthly wages for teachers for 1902 was $49.05 for males and $39.70 for females, a slight increase over the previous year.

The above figures relate to the public schools only. In addition the private schools are tabulated at 1,103,901 pupils for the elementary schools and 168,636 for academies and other secondary schools.

City and Village School Systems.—In 1902 580 cities, containing 8,000 inhabitants and upward, and 459 villages, containing 4,000 to 8,000 inhabitants, reported. The aggregate number of school children enrolled in these 580 cities was then 4,174,812. Besides these there was an enrollment of 877,210 pupils in private and parochial schools. In the 580 cities the number of male teachers was 6,969; female teach-

ers, 83,775. These cities alone expended $111,159,665. The entire population aggregated 25,293,143 people. In 1890, twelve years earlier, 442 cities of over 8,000 inhabitants reported an aggregate enrollment in the public schools of 2,627,275. It is interesting to note that the supervising officers in city schools numbered 5,025.

Public High Schools.—Students receiving secondary instruction (the ninth to the thirteenth year's work of the course of study and ages fourteen to eighteen) numbered in all 734,760 in 1902 and only 367,003 in 1890. The number had doubled in twelve years. Of these pupils 566,124 were enrolled in public high schools and 168,636 in private academies and in preparatory departments of other private institutions. The public high schools enrolled 72 per cent of the entire number of secondary students. Secondary students numbered almost 1 per cent (.94) of the entire population in 1902, having increased from a little more than one-half of 1 per cent (.59) in 1890. Thirty-two thousand three hundred and eighteen teachers were engaged in public high schools and in private schools of the same grade. The increase in public high schools has been very rapid in recent years. In 1890 there were 2,526 such schools and in 1902 6,292. Two hundred and seventy-five thousand six hundred and seventy-four of the students in the public high schools were studying Latin; 309,164 studying algebra; 13,780 studying Greek; 153,731 studying geometry; 216,403 studying general history; 40,602 studying chemistry. The number studying Latin in 1892 was 39 per cent of the entire number of students attending high schools, and in 1902 the percentage had increased to 50.07. The value of the school property of the high schools of the United States amounted to nearly $125,000,000; that of private schools of the same grade amounted to about $65,000,000. About one-half of the private schools are controlled by religious denominations.

Universities and Colleges.—The total number of institutions of this class reporting in 1902 is 638, of which 131 admit women only. One hundred and thirty-four universities and colleges admit only men to the undergraduate department, and 330 admit both men and women. Of the 43 schools of technology 27 institutions report women among the undergraduates. The total number of students resident at these institutions in 1902 was reported at 107,391. Of these 66,325 men and 22,507 women were in universities and colleges for men and for both sexes; 5,549 were in colleges for women; 11,808 men and 1,202 women were in schools of technology. Comparing 1902 with 1890, the total number of men had increased from 44,926 to 78,133, and the number of women had increased from 10,761 to 29,258. Of the entire number, 107,391, 49,982 were in classical courses and 14,287 were in other courses for general culture; 7,303 in general science courses; 3,472 in agriculture. It is interesting to note that the total value of property possessed by these institutions for higher education amounts to $417,205,234; seven of these institutions have endowments of more than $5,000,000 each, and eight have from $2,000,000 to $5,000,000. The total amount of benefactions reported by the several institutions for higher education as having been received during the year is $17,039,967. The total benefaction for all kinds of educational purposes as well as for philanthropic purposes for the year was, of course, very much larger than this.

Professional Schools. — Professional students and graduates for 1902 were as follows: Theological, 148 schools, 7,343 students (108 of these being women and 2,069 having received A. B. or B. S.), 1,056 graduates; law, 102 schools, 13,912 students (of these 165 were women and 2,644 had received A. B. or B. S.), 3,524 graduates; medical, 154 schools, 26,821 students (of whom 2,476 had received A. B. or B. S.), 5,069 graduates; dental, 56 schools, 8,420 students (of whom 265 had received A. B. or B. S.), 2,288 graduates; pharmaceutical, 59 schools, 4,427 students (of whom 43 had received A. B. or B. S.), 1,379 graduates; veterinary, 11 schools, 576 students (of whom 22 had received A. B. or B. S.), 141 graduates. It is interesting to note the comparison—3,254 theological students in 1870, 8,050 in 1895, 7,343 in 1902; 1,653 law students in 1870, 8,950 in 1895, 13,912 in 1902. This continued increase of students in law schools indicates that the fitting for the profession of law has become less a matter of studying in the office of a lawyer and more a matter of attending a regular law school. There were 6,194 medical students in 1870 and 26,821 in 1902.

Agricultural and Mechanical Colleges.—These institutions—50 of them for white students and 16 of them for colored students—are counted most of them in the list of universities and colleges already considered; a few of them are counted with secondary institutions or with State normal schools. These 66 institutions were endowed by the acts of Congress approved July 2, 1862, and August 30, 1890, and in 1902 they received in the aggregate from the States and Territories in which they are located the sum of $4,233,237, and from the income derived from the lands received under land grant of 1862, $684,141, and under later land grants, $1,315,919. The Federal Government contributed about 22 per cent of the income of these colleges. The total number of students in the collegiate departments of these institutions for white people was 15,096 men and 1,654 women. In the colored institutions there were 2,410 men and 2,095 women in the preparatory departments and only 235 men and 61 women in the collegiate departments. According to the provisions of the act of Congress of August 30, 1890, none of the money received from that endowment ($25,000 a year to each college) can be appropriated for foreign languages, whether modern or classic. These languages are, however, provided for out of other funds. The total value of the property owned by these institutions is $69,666,303, of which nearly $3,500,000 belong to the institutions for colored students.

Schools for the Training of Teachers.—In 1902 there were 282 public and private normal schools reporting to the bureau. There were 65,068 students in these institutions, and 10,005 graduated that year. In 1890 there were 178 institutions, 34,814 students, and 5,237 graduated. The students and graduates had nearly doubled. Besides these there were 29,065 normal students in universities and colleges and high schools in 1902. State appropriations for public normal schools in 1890 amounted to $1,312,419 for current expenses and $900,533 for new buildings. In 1902 the amount for current expenses had reached $3,228,090, and for buildings, $906,301. One hundred and thirty-nine public normal schools report an aggregate of $20,628,432 as the value of their school property.

Manual and Industrial Training Schools. — One hundred and sixty-three schools of this class reported to the bureau in 1902. The number of pupils for that year was 49,269 (29,183 boys and 20,086 girls), costing for current expenses $1,118,406. Thirty-seven cities reported manual training in 1890, and 270 cities in 1902. Besides manual training, technically so called, without instruction for trades, a large majority of the schools report special trades as included in their course of study. Out of 140 schools that report the number of students in each branch 123 report trades.

Besides the items mentioned above information is obtained by schedule regarding the commercial schools newly established, and also regarding business schools. Commerce (elementary or advanced instruction in this branch) is taught in 177 universities and colleges, 51 public and private normal schools, 956 academies, 3,213 public high schools, 520 business schools, a total of 240,697 students being engaged in preparing themselves for commercial work.

There are reports from institutions for the blind, showing that there are 39 schools, containing 4,315 pupils; 121 schools for the deaf, with 11,938 pupils; 20 State schools for the feeble-minded, showing 12,070 pupils in attendance.

There were 92 reform schools in the United States in 1902, enrolling 29,612 pupils. Of these 18,469 were learning useful trades.

In 1902 the common school enrollment in colored schools in the sixteen former slave States and the District of Columbia numbered 1,587,309. In 1877, the first year in which the statistics of the colored schools were taken separately, there were 571,506 colored pupils and 1,827,139 white pupils in the schools of the South. This number increased to 2,215,678 white pupils and 784,709 colored pupils in 1880. In 1890 the white pupils of the sixteen former slave States had increased to 3,402,420, and the colored pupils had increased to 1,296,959. The increase, therefore, in the past thirteen years of white pupils has been nearly 1,300,000 and colored pupils 440,000. The expenditure from taxation for the public schools of both races in these sixteen States amounted to $37,567,552 in the year 1902. The total amount of public taxes expended during the period beginning in 1876 and ending in 1902 for white and colored has been $687,691,329, of which it is estimated that more than $125,000,000 has been expended to support the common schools for negro children.

The illiterate person knows language or speech only by the ear. As all people do their thinking mostly in words, the illiterate person may be said to be ear-minded. When a person comes to know language by the ear he gains in ability in learning the experience of other fellow-beings—such an experience as the highest brute animal is debarred from. For by the use of speech each person may live vicariously over again the lives of other people. He may, by hearing them tell their experiences, their observations, reflections and deeds, get the net results of

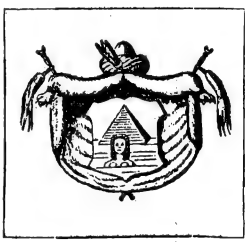
their living, so that man, even if illiterate, may be properly described as an animal who possesses the power of living several lives in one. Through letters the person becomes eye-minded, and when a person can read without effort he finds himself in possession of a much more accurate mind than is possible in the case of the illiterate. Ear-mindedness, having to keep up, as it does, with the spoken word, and having to depend on the memory of what is spoken, cannot critically examine the statements and descriptions, the definitions and deductions, as it can do when it has before it the printed page. In fact, accurate thinking for the most part becomes possible through eye-mindedness and not through ear-mindedness.

The unskilled laborer does not get good wages in any part of the country. The skilled laborer in the city, using tools and directing machinery, earns and receives an average of double the wages that the farm hand gets.

But machinery is going out from the city to the farm, and the farm, too, needs fewer laborers and can furnish more productions. The surplus farmers set free by this process must go into mechanical industries or into transportation and commerce. Fewer and fewer people are needed for the production of the raw materials of food, clothing and shelter all the world over, thanks to mechanical inventions which are pushing the mere illiterate drudge out of his vocation. He must climb up or else starve in his attempt to compete with the machine.

Here is the wisdom that founds a school system. It makes possible a change of vocations among its people. It puts alertness and versatility in place of mere brute strength and persistency. More than this, the school puts aspiration and ambition into its pupils. The school next proceeds to teach the sciences by which the wonders of the world have been accomplished; mathematics, the tool of thought, by which matter is moved and forces are tamed into the service of man; history, and geography, and grammar, and literature, by which man comes to know men and gains the ability to combine with them in civilized effort.

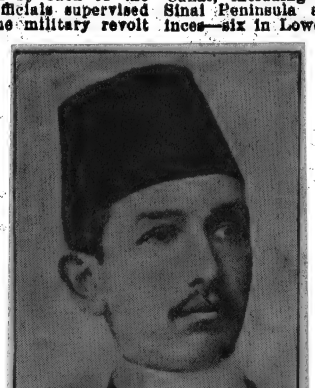
The city is the necessary resort of the surplus laborers no longer needed on the farm. We do not need so many people to get for us the raw materials of food, clothing and shelter, but we need more and more people to turn these raw materials into articles of comfort and luxury; we need more and more people to work at transportation and intercommunication; we need more persons in the work of giving culture to the rest. The savage tribe, unaided by machinery, can afford only one man for the production of ornament; nearly all are needed for the supply of food and clothing of the plainest sort. But the partly civilized tribe can afford ten persons for the production of ornament and luxury. The proportion increases rapidly as we ascend in the use of machinery, and the time is arrived now when more than a hundred in a thousand are needed for the production of ornament and luxury.



In transportation and intercommunication with railroads, telegraphs, postal systems, newspapers, books, libraries, schools and churches—here the line rises from mere transportation through intercommunication up to culture—in these employments more and more workers will be needed.

Here we may see the vast importance of school education in enabling the citizen who shares in the productions of his fellow-men to know his fellows and understand their views of the world. It enables him to know their opinions and to share in their spiritual as well as in their material productions. It enables him to participate in the formation of national and international public opinon.

Small as is the schooling given by our nation to its people—some four and a half years apiece—it suffices to make reading and writing universal, and with them gives also a limited acquaintance with the rudiments of arithmetic and geography. This fits the citizen to become a reader of the daily newspaper and thus brings him under an educating influence that will continue throughout his life. A newspaper civilization is one that governs by means of public opinion. The newspaper creates public opinion. No great free nation is possible except in a newspaper civilization.



Egypt.

Capital:
CAIRO.

The reigning Khedive of Egypt is the seventh ruler to represent the dynasty of Mehemet Ali, who secured absolute control of the country by force of arms in 1811. In 1879 Ismail I., grandfather of the present ruler, was compelled to abdicate by the governments of Great Britain and France, and, while he was succeeded by his son, Mohamed Tewfik, a Comptroller-General was appointed by each of the two European nations, and these officials supervised the finances of the country until the military revolt in 1882. On January 18, 1883, after the British had overcome the revolt and dispersed the army, the Khedive issued a decree abolishing the dual control and appointing a British financial adviser as a member of the Government. The position of Egypt, therefore, is a peculiar one. Nominally it is a province of the Turkish Empire, although actually it is autonomous under the Khedive, being subject only to the tribute of $3,600,000, payable annually to the Sultan, and yet, at the same time, it is dependent for its existence upon the will of European Powers, Great Britain being the dominant factor in the control of its internal affairs.

Abbas Hilmi, the present ruler, is the son of Mohamed Tewfik. He was born July 14, 1874, and succeeded to the throne on the death of his father, January 8, 1892. He married Princess Ikbal Hanem, and their children are: Princess Emina Hanem, born February 12, 1895; Princess Atiatou-llah Hanem, born June 9, 1896; Princess Fathieh Hanem, born November 27, 1897; Prince Mohammed Abdul Mouneim, born February 20, 1899. Prince Mohammed is heir apparent to the throne.

The Khedive of Egypt.

Egypt is a Turkish dependency. The administration of Egyptian affairs is carried on by native ministers under the ruling of the Khedive. All matters of finance must be concurred in by an English financial adviser, who sits in the Council of Ministers, but is not an executive. Egypt proper is divided into six governorships (those of Cairo, Alexandria, Damietta, Suez Canal, including Port Said and Ismailia, Suez and Sinai Peninsula and El Arish), and fourteen provinces—six in Lower Egypt, eight in Upper.

Christians, Jews and Moslems form by far the largest part of the population, with the Moslems far outnumbering all others.

Egypt boasts 9,878 primary, 28 secondary, 25 higher or professional and 96 exclusively female schools and academies, both private and public.

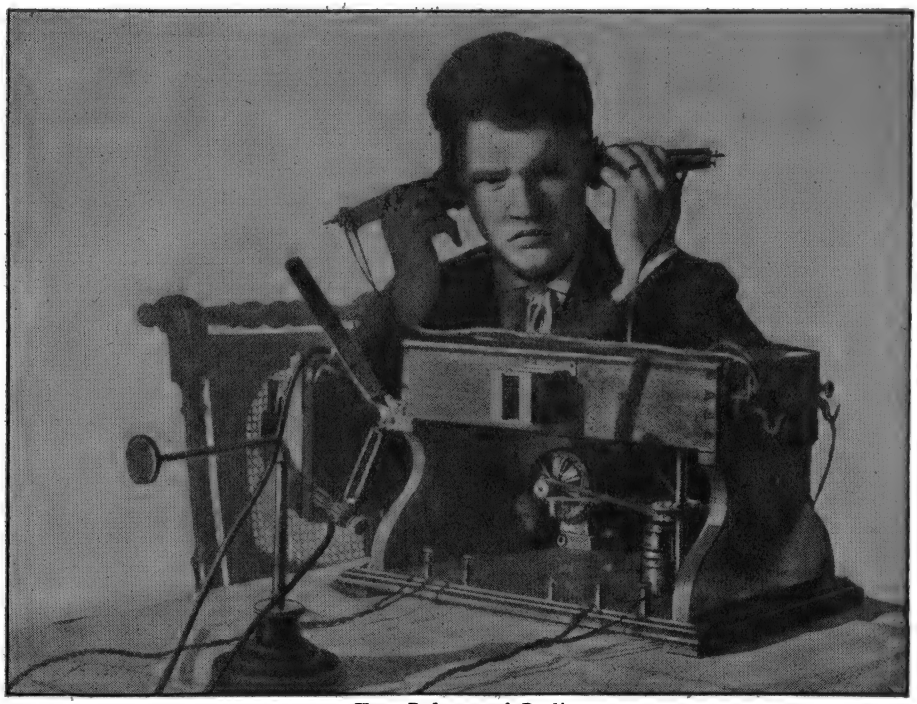
The system of justice in Egypt is complicated. Religion plays a great part. Owing to the capitulations in Egypt, as in the rest of the Ottoman Empire, foreigners are exempt from the lower tribunals.

The revenue for 1902 amounted to $60,743,280, and the expenditure to $57,162,610. In 1901 the public debt was $500,402,729.

Egypt is distinctively agricultural, having three seasons each year. The Winter crops, sown in November and harvested in May and June, are cereals of all kinds; the Summer crops, sown in March and harvested in October and November, are sugar, rice and cotton; the Fall crops, sown in July and harvested in September and October, are a kind of maize, rice and vegetables. In Lower Egypt, where there is canal irrigation, cotton is grown in great quantities. The imports of Egypt in 1902 amounted to $74,073,440,

and the exports to $88,085,065. This is exclusive of specie movements.

Anglo-Egyptian Soudan was won from the Khalifa in 1889 by the combined forces. Under the treaty of January 19, that year, the province is governed under the two flags and is presided over by a Governor-General appointed by Egypt with British assent. Laws are made by proclamation.



The whole of the Egyptian army was disbanded by a decree of the Khedive in 1882, and a new army organized by a British general officer known as the Sirdar. The present Sirdar is Major-General Sir Reginald Wingate, K. C. B., K. C. M. G., D. S. O., A. D. C. The army has a total strength of 18,364.

Under the existing joint rule there is a somewhat peculiar distribution of revenue and expenses. No duties are levied on imports from Egypt, and the duties on imports from other countries may not exceed those levied in Egypt. The cost of administration is, for the present, largely borne by Egypt. Egypt receives from the Soudan a considerable amount of gold dust, ivory, ostrich feathers, gums, hides and skins, though the Dervish revolts of the last few years have nearly stopped active trade. By the convention between the British and Egyptian governments, signed January 19, 1899, the import and export of slaves is prohibited. Cairo is in telegraphic and railway communication with Khartoum, and since December, 1899, the Soudan has been declared open for general traffic.

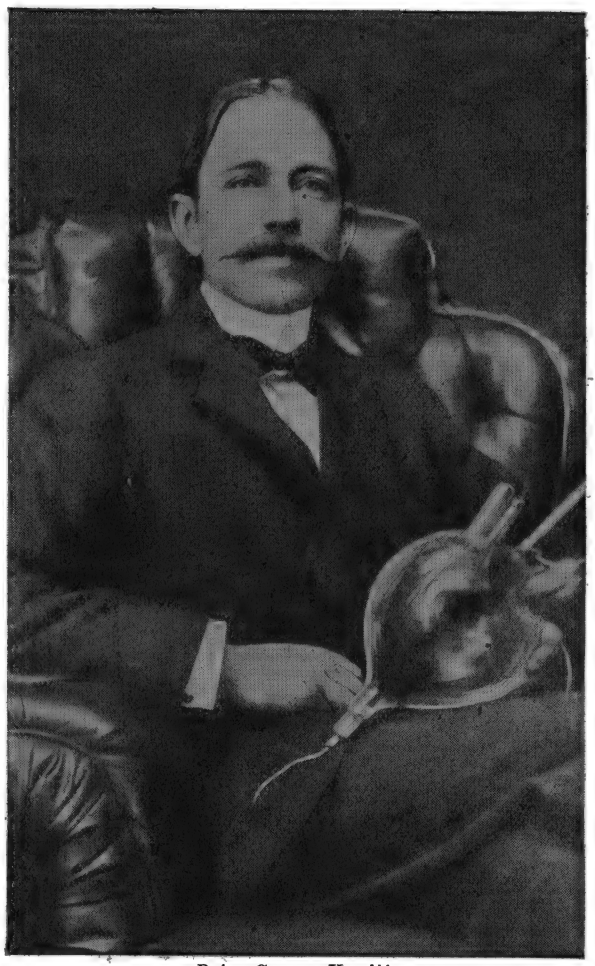
Events in 1903.—The official budget for the year showed that Egypt continued to prosper financially. The octroi tax was abolished in Cairo and Alexandria, and immediate and beneficial relief was given the poor thereby. There were unfriendly relations between the Khedive and the Sultan of Turkey in the early part of the year on account of a desire on the part of Egypt to change the route of the Holy Carpet pilgrimage from Medina to Mecca. Turkey objected, and thereupon the Khedive announced that the pilgrimage would not be made unless as he directed.

Electricity in 1903.

Investigation in the field of electrical science receives permanent stimulus from the large and varied adaptability to the uses of mankind which has made the once mysterious element one of our most active servants, and at the same time one of the most powerful agencies in that large material development which is one of the glories of the twentieth century. Wonderful as have been the discoveries of the past, it would seem that the possibilities of new revelations in this science are exhaustless. The year 1903 contributed its share to our store of knowledge concerning it, and some of the discoveries to be recorded are of such importance that savants of the high standing accorded to Lord Kelvin, of England, and Professor M. I. Pupin, of Columbia University, have pronounced them wonderful, and, with other experts, believe that they will help revolutionize the industries of the world. These are the discoveries of Peter Cooper Hewitt, of New York City. In view of the yet incomplete development of wireless telegraphy, most importance attaches to his latest invention, the mercury vapor interrupter. Of this device Professor Pupin has said that wireless telegraphy will not make any essential progress until a method is discovered of generating very powerful and persistent electrical waves, which must be powerful in order to overcome distance, and persistent in order to permit methods of selective tuning. Such waves, in his opinion, can be produced by Mr. Hewitt's mercury interrupter. This interrupts, stops and starts the powerful electric current which moves millions of times in a second. Each stopping and starting means an explosion, but the discharges are so inconceivably rapid that they blend into one continuous note. Mr. Hewitt sets up vibrations of electric-wave currents so vast and far-reaching in their energy that they may be caught by wireless telegraph instruments on the opposite side of the globe, while not one of a hundred other instruments could steal the message without knowing the secret code

Herr Ruhmer, of Berlin.

signal sent to the particular station awaiting the message. What the invention will accomplish in this direction remains to be seen.



William Marconi, who still maintains the lead in the race for perfecting wireless telegraphy, and whose system is more largely in practical use than any other, also claims to have made new inventions, four in number, which greatly simplify the problem. They make it possible, he claims, to transmit messages across the Atlantic with towers less lofty than were originally required, and with about half the power previously used. The full triumph of the Marconi system will date from early in the year, the first wireless message to cross the Atlantic being one from President Roosevelt to King Edward VII., which was transmitted from Wellfleet, Mass., to the Marconi station at Poldhu, Cornwall, England, during the night of January 18. Among the interesting incidents of the practical adaptation of the system were the news service carried by the London Times for a few days in March and the publication of news bulletins daily on the transatlantic steamships.

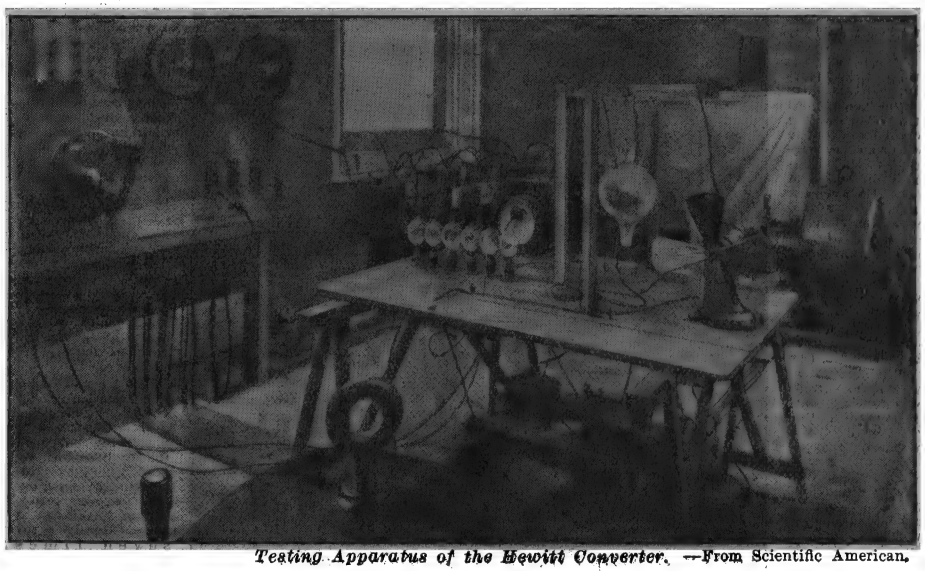
Neither Marconi nor any of his rivals has yet developed a system which can be said to be in competition with the older systems of telegraphy. Lee De Forest, the American inventor, is making vigorous strides in this direction, and so far as wireless telegraphy is being adopted he is proving a formidable rival to Marconi. In Europe the Lodge-Muirhead wireless system is being pushed forward in England, while on the Continent there are other systems which claim and receive attention, and which will inevitably play an important part in that ultimate development which will place the news upon commercial bulletins daily on the transatlantic steamships.

Among discoveries which promise to assist in this development an important one is that of Professor Ferdinand Braun, of Strasburg University, who announced before the Strasburg Scientific Society on January 23 that he had discovered a method of producing electric energy of unlimited volume and projecting it into space in the form of electric waves to any desired distance. It will secure greater accuracy of transmission through a more perfect attunement of the transmitting receiving instruments, and Professor Braun thinks he has substantially reached a method of transmitting exclusively to one point of the compass, thus avoiding interference by other waves. The method, it is claimed, will work economically and cheaply. In March successful experiments were made with the Braun system on a military railway near Berlin, telegrams being sent from the trains to the stations, and vice versa, without difficulty.

A new wireless system which has received marked attention from the German Admiralty is one invented by Ernst Ruhmer, which directs electric waves exclusively to one point, obviating the danger of outsiders catching messages not intended for them. The result is obtained through a series of parabolic mirrors which give all the electric waves a parallel course. The system is available for distances of twelve to fifteen miles, and is intended principally for communication between vessels in harbor or along the coast.

In connection with the possibilities of wireless telegraphy in naval use some interesting experiments were made early in the year at Portsmouth, England, and it was found that wireless telegraphic communication with submarine craft is possible. It was also found, however, that communication could be established only so long as the light penetrated to the submarines; it ceased as soon as they were submerged to a depth where the light could not reach them. It is expected that this discovery will have an important bearing on the future of submarine warfare.

Peter Cooper Hewitt.



Peter Cooper Hewitt's mercury vapor interrupter and his static converter were made possible by his previous invention of an electric vapor lamp, which produces a pure, steady light seven times brighter and cheaper than the incandescent lamp now in use, although in its light colored objects undergo remarkable changes in appearance. In experimenting with this form of light Mr. Hewitt met the seemingly insurmountable obstacle encountered by other inventors—namely, the lack of an apparatus to control the current and make the flame absolutely steady by some automatic method, simple and economical. He finally overcame the difficulty by means of mercury vapor, discovering the secret so vital in wireless telegraphy—the controlling of alternating currents and their transformation into economic direct electric currents of commerce.

A discovery of a similar nature is the "mercury arc," invented by Dr. Arons, of Germany, and perfected by Charles P. Steinmetz, chief electrical expert of the General Electric Company. The discovery was made some years ago, and out of it Mr. Steinmetz has evolved a green light which is yet to be perfected. It is, Mr. Steinmetz claims, the only harmless light, inasmuch as the harmful effects of any artificial light are due to the red and orange rays, which affect the eyes injuriously. These rays are less prevalent in electric light than in any other and

are entirely absent from the mercury arc light. The difficulty experienced in using this light was in starting it, but Dr. Weintraub, of Schenectady, N. Y., has found an ingenious way of starting it without high voltage by means of a small auxiliary arc, which also makes the light stable.

In the same direction as the discoveries just mentioned is that announced to the Cornell Electric Society in February, 1903, by Professor Frederick Bedell, of the Physics Department of Cornell University. Professor Bedell's discovery is in connection with electric power transmission, and involves the practicability of sending an alternating and a direct current at the same time. All of the discoveries mentioned have an important bearing upon every possible use of electricity.

Wireless telephony, which was a natural sequence of the discovery of wireless telegraphy, continued to

Testing Apparatus of the Hewitt Converter. —From Scientific American.

be the subject of interesting experiment during 1903. A. Frederick Collins, of New York City, succeeded in July in establishing communication both ways over the Connecticut River at Hartford. The tests, which lasted two days, were witnessed by about a thousand persons, including many scientists. It has not yet been tried by the crucial test of commercial economy, but it is being subjected to the most careful scrutiny of scientific men in Europe as well as in America. Ernst Ruhmer, whose experiments in wireless telegraphy have been previously mentioned, has applied his discovery to telephonic experiment also, and has sent telephonic messages over a distance of more than four miles by the aid of his parabolic mirror.

In regard to wireless transmission of messages, either telegraphic or telephonic, one of the matters frequently discussed during the year was the possibility of operating any system in such a manner as to prevent the stealing of messages or the interruption of communication. Instances of breaking in upon a line of communication have been somewhat frequent, both in experiment and in unexpected confusion created where the system was in use for practical work, as happened during the international yacht races off Sandy Hook during the month of August. There are experts who declare that they could effectually cut off communication were it desirable. That the question is an open one as to whether interference can be guarded against is clearly evident. Professor John A. Fleming, the well-known electrical engineer, in a lecture before the Society of Arts in London during March, said that his experiments proved conclusively that there is no interference; and yet, four months later, when he was giving a practical demonstration of the Marconi system before the British Institution, the messages which he had been receiving at intervals from the Marconi station at Poldhu were suddenly interfered with, to his great annoyance. Subsequently Nevil Maskelyne, replying to a letter in the London Times expressing Professor Fleming's indignation, publicly acknowledged that he was the culprit. The interesting feature of the matter is embodied in Mr. Maskelyne's statement that while it had been announced that to illustrate Professor Fleming's lecture experiments in syntonic electric wave telegraphy would be given, his interfering transmission system had not been tuned in any way. From this he argued that if the lecture was given with illustrations, as promised, Marconi's syntonic system is not proof against interference from an untuned transmitter.

Exploration in 1903.

In the history of exploration, growing larger with every year, the most interesting chapter for the year 1903 will relate to work done in the Antarctic region. Of this work the most important is that done by the English expedition under command of Captain R. F. Scott, R. N., which left England in August, 1901, on the ship Discovery. The expedition left New Zealand in December of the same year and entered the ice pack two days before Christmas. News of extremely valuable interest was received from it in March, 1903, upon the return to New Zealand of the relief ship Morning, sent out from England in July, 1902. Lieutenant E. H. Shackleton, R. N., one of the officers of the expedition, returned with the relief ship in order to proceed to England and report progress. Captain Scott's party was found on January 23 in McMurdo Bay, Victoria Land. All were in good health, and the only casualty reported was the loss of a seaman who fell down an ice slope while on a sledging expedition and was drowned.

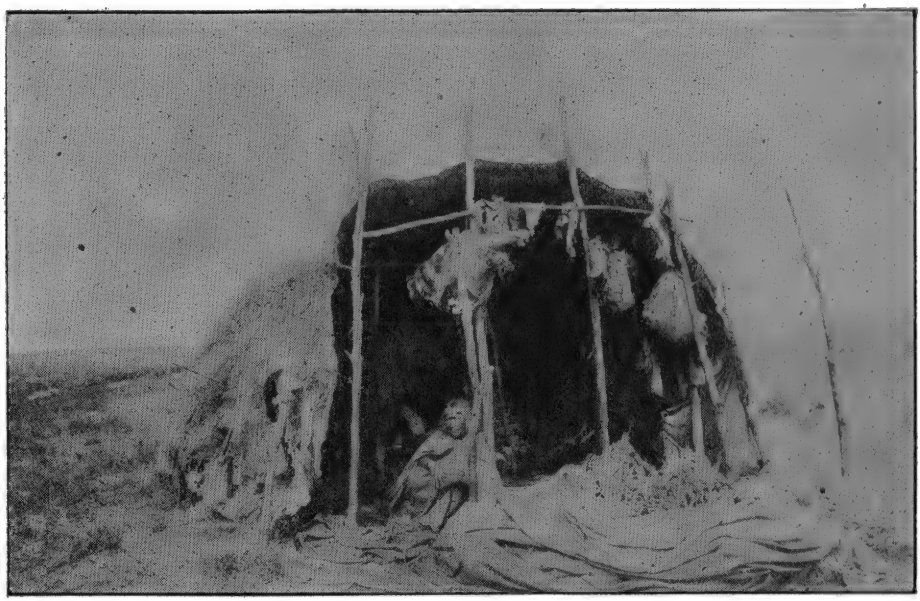
Captain Scott's report up to the time of meeting with the relief ship is to the effect that, entering the ice pack in latitude 67°, the Discovery reached Cape Dare on January 9, 1902, and was delayed there by a gale and ice. Cape Crozier was reached on January 22, after which the Discovery sailed along the barrier within a few cable lengths, examining the edge, from which rose high snow slopes to extensive, heavily glaciated land, with occasional bare, precipitous peaks. On February 3 the Discovery entered an inlet in the barrier in longitude 174°. A balloon ascent was made, and sledges examined the land to latitude 78° 50'. Excellent Winter quarters were found near Mounts Erebus and Terror. The ship was frozen in on March 24. Exploration by sledges began on September 2, the most important being made

by Captain Scott, Dr. Wilson and Lieutenant Shackleton, who travelled ninety-four miles southward, reaching land in latitude 80° 17′, longitude 163°, the farthest south recorded to the present time. Sir James Ross's farthest south was 78° 4′, and Borchgrevinck's record, made in February, 1900, was 78° 50′. Captain Scott's party had a most trying journey, and Lieutenant Shackleton almost died from exposure. All the dogs died, and three men dragged the sledges back. The party found that ranges of high mountains continue through Victoria Land. Foothills resembling the Admiralty Range were discovered in longitude 160°. The ice barrier presumably floats. It remains horizontal and is fed slowly from the land ice. Mountains from 10,000 to 12,000 feet high were seen in latitude 82°, the coast line continuing at least as far as latitude 83° 20′, nearly due south. Ascending a glacier in the mainland, the party found a new range of mountains. At the height of 9,000 feet they reached a level plain which was unbroken to the westward as far as the horizon. A large lot of new marine fauna was discovered and some marine plants, but they are of a very low type of organization. Seals abound, but the polar bear and walrus are not there. No new large animals were found, nor was there any vestige of life of any kind inland. Captain Scott's report is regarded by such men as Sir Clements Markham, president of the Royal Geographical Society, as proving conclusively that the greater part of the Antarctic region is a vast continent. Besides this interesting discovery many important experiments were made at the various stations built for the purpose of recording magnetism in the different latitudes.

The German Antarctic expedition, which sailed on the steamship Gauss, leaving Cape Town on December 7, 1901, returned to Cape Colony, en route for home, on June 9, 1903. This was entirely a government undertaking, and was elaborately equipped. The scientific staff numbered seven men, besides Dr. von Drygalski, the leader. Captain Hans Ruser commanded the Gauss. It was the intention of the expedition to establish a magnetic station on Kerguelen Island and a Winter station farther south. The most important result of the expedition, aside from the many scientific investigations made, was the discovery of land hitherto unknown in latitude 66° 2′, longitude 89° 48′ west. This land the discoverers named Emperor William II. Land. Its discovery strengthens the theory revived by Captain Scott's report of a vast continent at the South Pole.

Of Arctic exploration the record for the year is one of new effort entirely. Baron E. Toll, a Russian explorer, sent out to explore the coast line of Siberia, is supposed to be in the vicinity of Bennett Island, whither he started from Cape Wysseki on July 13, 1903, intending to Winter there if the ice prevented his ship, Saria, following him. He spent the Winter of 1901-2 on the island of Kotelnoi, the largest island of the New Siberia group, leaving there for his journey farther north on May 23, 1902. He is the first white man to visit the island since the Jeanette party went there after their vessel was crushed in the ice. His intention is to make a thorough study of the island and of the animal life in the surrounding water.

Baron Toll's mission is not polar discovery. That



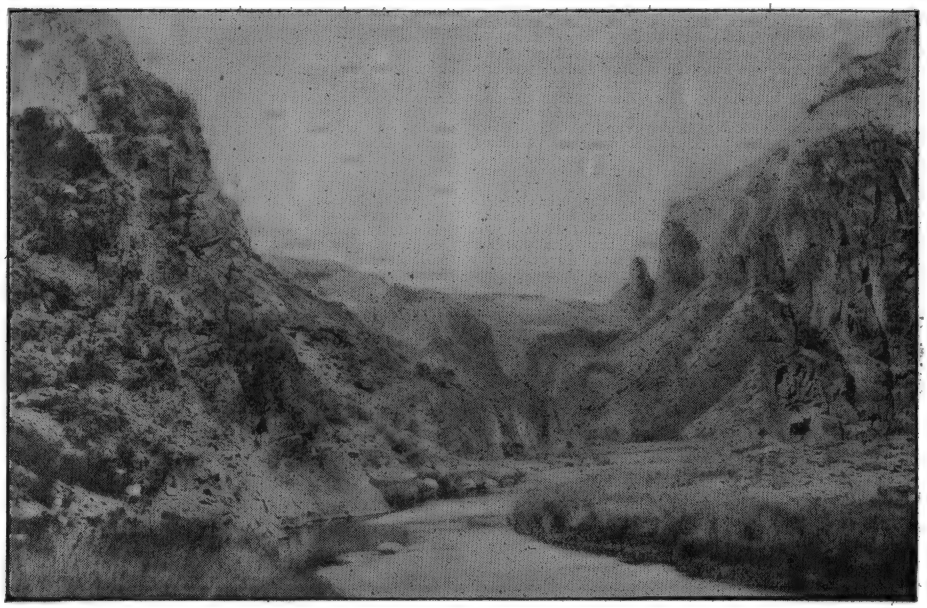
A Tehuelche Boy of Twelve Years.

line of exploration is now being prosecuted by two expeditions. The whaling ship Gjoa, with Captain Ronald Ammundsen's Magnetic North Pole Expedition, sailed from Christiania, Norway, on June 17, 1902. The plan was to take a route never before attempted, and while it was not purposed to reach the North Pole the projected course, if Captain Ammundsen is able to follow it, will take him directly across the Pole. The object of the expedition is to determine, if possible, the location of the earth's magnetic North Pole.

The other polar expedition now in the field is the new one fitted out by William Ziegler, the wealthy New Yorker, whose efforts in this direction have been marked by an unsparing expenditure of means, and who backed the Ziegler-Baldwin expedition. The new expedition sailed on the whaling steamship America from Trondhjem, Norway, on June 23, 1903, for Franz Josef Land, where the America was to remain for the Winter, expeditions being sent out with dog sledges. Anthony Fiala, the leader, was a member of the Baldwin expedition, and his party includes several of his former companions. William J. Peters,

of the National Geographical Society, is second in command. Francis Long, of the Weather Bureau, is the meteorologist. The other prominent members of the expedition are R. R. Tafel, of Philadelphia; Charles L. Seitz, of Evansville, Ind.; Dr. G. W. Shorkley, of Camden, Me.; J. Colin Vaugh, of Forest Hill, N. J.; Charles E. Rillets, of St. Louis, Mo.; John Vedoe, of Boston, Mass.; Spencer W. Stewart, of Brooklyn, N. Y., and H. H. Newcomb, of Milford, Mass. Captain Edward Coffin is commander of the America, with Captain E. A. Howan as first officer. The crew is made up of whaling men.

Commander Robert E. Peary, U. S. N., who has the honor of having made the farthest point north yet reached, has decided to embark in one more expedition to reach the North Pole, and a leave of absence for three years has been granted him in order that he may make what he believes will be a successful dash for the Pole. He will again have the support of the Peary Arctic Club, of New York, at the head of which is Morris K. Jesup; and although he has no promise of aid from the Government, means will not be lacking to give him that perfect equipment of ship, materials and men with which he has declared it is possible to realize his long-cherished ambition. His leave of absence begins in April next, and he will sail some time early in the Summer of 1904.



A Typical Tehuelche Toldo and Occupant.

Under the auspices and in the interest of various geographical and scientific bodies, as well as great educational institutions, the work of exploration is constantly in progress in every portion of the world, and notable additions are being made continually to the store of information gathered concerning countries, races, fauna, flora and all that goes to make up the universe, so far as man can know it. The unknown regions of the earth are becoming known to all who care to know of them, and one of the results is that countries which, even to many educated persons, are merely names on the maps are being made real. Patagonia is one such country. To many people the very name of the country is suggestive of a region as imaginary as the lands described by Gulliver in his travels. Thorough exploration of that country has been made by expeditions sent out by Princeton University during the years 1896-99 under the leadership of J. B. Hatcher, the first volume of whose voluminous report, published in 1903 through the liberality of J. Pierpont Morgan, is a most valuable as well as intensely interesting contribution to the literature of geographical research. In fact, it is much more than a geographical narrative, and will be found a mine of information on geology, zoology, ethnology, etc., to say nothing of its value to the student of industrial and commercial problems. It is a large quarto, of 314 pages, printed in the finest manner and copiously illustrated with plates of the most costly description. The editor of the work is William B. Scott Blair, professor of geology and paleontology at Princeton University.

Patagonia was an entirely unknown country until Darwin visited it in 1833-36, and the popular conceptions of it were of the most vague nature. His discoveries of extinct fauna were of immense value. Mr. Hatcher's expeditions, of which there were three, were undertaken to make collections of the vertebrate and invertebrate fossils of the southern region, and he was accompanied by O. A. Peterson and A. E. Colburn. The intelligent collection of fossils involves the determination of stratigraphical succession, and in this direction Mr. Hatcher accomplished a great deal of useful work, making possible for the first time a rational account of the geology of large areas in southern Patagonia. No region of the earth presents more remarkable geological formations, and upon the coast, as well as in the interior, some of the most remarkable scenery that could be imagined was found. The views obtained of them, as reproduced in the first volume of the reports, form in themselves a wonderfully interesting collection. Those of an ethnic nature are even more interesting. The old conception of Patagonia was that it is a land of giants. While the natives, known as Tehuelches, are certainly of a large average stature, they are not of gigantic proportions. A close study of them was made, and the pictures obtained suggest that the race is one of unusual intelligence for aborigines. They resemble our own American Indians in appearance. For an uncivilized people they are remarkably peaceable and of industrious habits. Their arts and industries are entirely limited to the manufacture of their tents, clothing and bedding and such tools as they use in the construction of these articles and in fashioning such implements as they use in the pursuit and capture of the guanaco, rhea and a few other animals of less importance found in Patagonia. They have no firearms, but depend entirely upon their skill with the bolas, and upon the swiftness of their dogs and horses. Throughout the year the men find more or less employment in hunting the guanaco and rhea, from which they derive almost their only supply of food.

Although Patagonia remains the most sparsely settled of the inhabited portions of the earth, settlements have been made from time to time since 1579. The development of the resources of the country is, of course, in its infancy. The seal and whale fisheries were the first industries to attract attention, but

they are now the least important. Gold mining, lumbering and wool growing are now the chief industries, and the last named is pre-eminently so. The agricultural products of the country at present are limited to a few vegetables, such as potatoes, turnips, carrots, cabbage, lettuce and other commoner and hardier species. The soil and climate are not generally adapted to agriculture, but there are river valleys which present conditions that might improve the country in this respect by means of such irrigation canals as have been used with success in the arid West. There are coal deposits at Sandy Point and various other places on the mainland and at Terra del Fuego, and several attempts at mining them have produced a very pure quality of lignite, sufficiently good for domestic purposes, but which will never be found useful in navigation or manufactures because of its low calorific properties.

Canyon of Arroyo Gio, Patagonia.

Expositions in the United States.

The first American world's fair was held in New York City by a company organized and incorporated to carry on such an exhibition. This company obtained a lease for five years of the grounds now comprised in what is known as Bryant Park. A huge building of pleasing architectural design, and constructed largely of glass and iron, was erected, and was given the name of the Crystal Palace. Here the first world's fair in America was opened with grand ceremony by Franklin Pierce, President of the United States, on July 14, 1853. The exhibition was practically a continuous one for three years, reopening for extended periods in 1854 and 1855. As a business enterprise it did not prove sufficiently encouraging, and it was abandoned, the Crystal Palace being let thereafter to the American Institute for its annual exhibitions. During one of these the building was destroyed by fire on October 15, 1858.

The next world's fair was a stupendous enterprise, undertaken in commemoration of the centennial anniversary of the Declaration of Independence. It was held in Philadelphia during the year 1876, aided by a large appropriation from the Congress of the United States and the co-operation of the various State governments, a number of which erected buildings of their own upon the grounds in Fairmount Park. The exhibition was generously aided by foreign governments also in the same way, and the exhibits from abroad occupied a vast amount of space, adding materially to the interest and value of the affair. American industries were, naturally, represented in all their varieties, and the exhibition grounds, with their avenues, gardens, beautiful buildings and other attractive features, were, in effect, a small and ever-popular city.

Atlanta, Ga., had a fair in 1881, which, while it was not a world's fair, inasmuch as it was designed mainly to illustrate the progress and magnitude of the cotton industry, was of a size and importance to rank with such. It was participated in by all the cotton-producing States, and was known as the Cotton States' Exposition. Another exhibition of much importance, though not characterized as a world's fair, was the Southern States' Exposition, held in Louisville, Ky., in 1883. The World's Industrial and Cotton Centennial Exposition was held in New Orleans, La., in 1884. The Columbian Exposition, held in Chicago in 1893, to commemorate the 400th anniversary of the discovery of America, was another magnificent enterprise on the scale of the Philadelphia Centennial, which it naturally excelled by the aid of many elements, including the immense progress made in practical science during the seventeen years intervening between the two. The "White City," built on the shore of Lake Michigan, was the marvel of the period, and the exposition was in the fullest respect a world's fair, enlisting the interest of nearly every race on earth, exemplifying every phase of human progress at the time and drawing visitors from every land. The California Mid-Winter International Exposition was held with gratifying success in San Francisco in 1894. Atlanta, Ga., had a second exposition of Southern industries in 1895. The Tennessee Centennial and International Exposition was held in Nashville, Tenn., in 1897. Omaha, Neb., was the scene of the Trans-Mississippi and International Exposition in 1898. Ranking with the Philadelphia Centennial and the Chicago Columbian expositions, the Pan-American Exposition, held in Buffalo, N. Y., in 1900, was in some respects superior to either of them. Marvellous progress, especially in the application of electricity to the uses of mankind, had been made, even in the brief period of seven years following the Chicago exhibition, and in spite of the fact that the growing frequency of world's fairs had taken the edge from interest in such enterprses. Buffalo was the objective point of tourists from all

parts of the world while the exhibition remained open. It was made sadly memorable, however, by the assassination of President McKinley, who was fatally shot while holding a public reception in one of the buildings.

THE WORLD'S FAIR AT ST. LOUIS.

By Walter B. Stevens, Secretary of the Louisiana Purchase Exposition.

The Louisiana Purchase Exposition will go down in history as a one-hundred-million-dollar world's fair. The company which has direct control of the organization and equipment of this mammoth display is a $15,000,000 corporation, having under its control for the year 1904 products and revenues which even the most conservative must admit have a value of $85,000,000.

Three factors contributed to the $15,000,000 stock of the corporation: (1) The citizens of St. Louis subscribed to $5,000,000 stock; (2) the city of St. Louis issued $5,000,000 worth of bonds, and (3) the Federal Government appropriated a third $5,000,000. The remaining sum to complete the $100,000,000 came from various sources. Foreign governments have appropriated about $10,000,000; the Federal Government has appropriated for its own display nearly

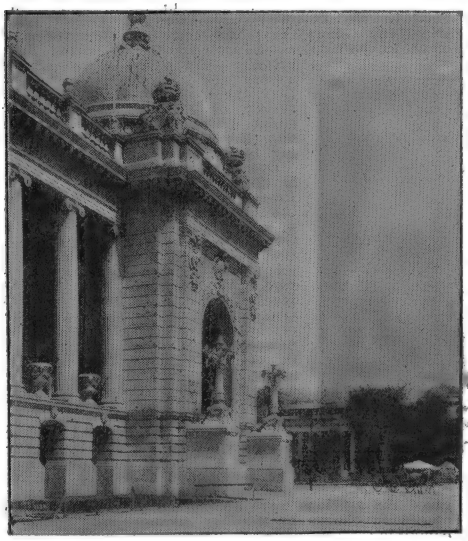
The Palace of Education, Showing the Palace of Varied Industries on the Right.

$2,000,000 in addition to the principal appropriation; the different States and Territories have appropriated something like $7,000,000 for their buildings and for the purpose of collecting and maintaining exhibits, and concessionaires and owners of such large establishments as the refrigerating plant will expend about $6,000,000 additional. The balance of the $100,000,000 is represented by a rough valuation upon the exhibits, which certainly is a most conservative estimate, considering that the collection in the Fine Arts Palace alone will be almost priceless.

The St. Louis Fair will not only be much larger than any previous exposition, but will represent the investment of many more million dollars, and it will differ radically in its methods, being a creature of motion rather than a latent display. Education is the keynote, sounded early by the projectors of the enterprise, and education has been the guiding voice in all that has been done. To show how things are created will be the effort rather than to show things in their perfected state; but the fact that active manufacture is to be carried forward will, of course, insure a sight of the completed products themselves. If one would compare a locomotive drawing a slow-moving accommodation train of fifteen years ago with the sixty-mile-an-hour creature of steel and brass that to-day draws the Twentieth Century Limited he may have some idea of the superiority over the Columbian Exposition of the Louisiana Purchase Centennial. Just as the locomotive has been improved in its many parts, so the thousands of displays which enter into an exposition have been advanced by scientists; and in the matter of size the same comparison can be made, for the St. Louis display will occupy 1,240 acres of ground, whereas in the City by the Lake 633 acres were used by the exposition management. Again, 128 acres are under roof for the World's Fair of 1904, whereas but 82 acres were so covered in Chicago.

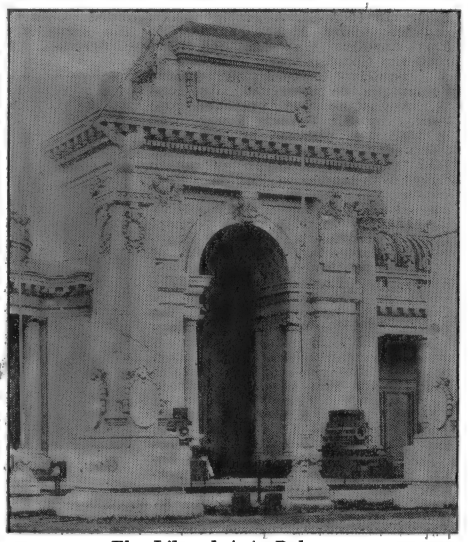
The site chosen for the Louisiana Purchase Exposition was undulating ground rising into forest-clad hills. The hills were undisturbed and form a rising emerald green frame for the ivory white palaces which have been erected on the lower land that was levelled to a plain for that purpose.

Two great pictures have been created by architect, engineer and landscape gardener. The first is formed by three leaping cascades that spring from the Terrace of States, which is crowned by Festival Hall, and that capped in turn by a golden dome larger even than the famed covering of St. Paul's Cathedral, and the dancing water flows into the Grand Basin which extends past four of the main exhibit palaces, then branches into lagoons that thread the remainder of the main picture as the canals thread the city of Venice.



The second picture has the varicolored Palace of Agriculture as a centre, and here again, while the background is of waving trees, color is piled upon color, for the hill slopes are gorgeous with flowers in bloom, one spectacle alone being six acres of land covered with nothing but rosebushes. In this setting also is the great floral clock, in which creeping vines are ingeniously woven around long metal pointers, so that they pass like things alive over numerals that are formed of rich-colored garden plants.

When night comes nature gives place to art, and the two pictures glow as if touched by a magician's wand, for electricity has become Aladdin's lamp and changes the cascades to an emerald green, yet again to a dull, phosphorescent glow, and at times liquid fire appears to be spreading down the incline, while flames follow and creep over the lagoon. Meanwhile lights hidden in foliage cause the marvellous clock to shine forth in the darkness, and even at midnight the hour can be read by persons a mile away.



Following the idea of revealment of processes, the

Director of Exhibits has arranged for several extensive and expensive displays. In the vicinity of the Mines and Metallurgy Building twelve acres have been reserved for a mining camp and an underground mine. In the first will be shown the method of placer mining for gold; the use of the cradle and hydraulic aids will be illustrated; and here there will be camps such as were occupied by the sturdy men of 1849. Again, one will see huge crushers at work chewing the quartz into fine particles, concentrators assembling the gold and silver from the sand and stamp mills crushing the precious ores. In the underground mine the men will be at work with the latest drills and other tools, while the method of shafting, bracing and uplifting of ore will be demonstrated.

In the Transportation Building two locomotives will be engaged in a tug of war, while another, placed on a turntable, will be set in motion, steam at high pressure and drive wheels revolving at a rate that would make its speed sixty or seventy miles per hour on a straightaway track.

Southeast Corner of Palace of Varied Industries.

The Liberal Arts Palace.

In almost every branch of liberal arts and manufactures the actual work of creation will be in evidence, even the method of generating steam and electricity having exhibits to be viewed from without plate glass coverings.

The Louisiana Purchase Exposition may be divided into six grand divisions. In the first are the main exhibit palaces, in which the demand for floor space has been so great that every square foot of room was applied for ten months before time for the exposition to open, and the necessary weeding out processes that followed insured that only the very best of everything would be seen.

Division second is composed of the Federal exhibits and the exhibits of the insular possessions. In the Government Building, which will be twice the size of the Government building at any previous fair, will be the wonders of the Smithsonian Institution and the many interesting displays by different departments of the Government. Near this structure great coast defense guns will be operated, and in another place will be seen the deck of a modern battleship, equipped with twelve-inch rifles, quick-fire pieces, superstructure such as the bridge, davits for handling the boats, ventilators for supplying the stokehole with fresh air, and quarters for the officers and men, the latter illustrating the lives of the crew while on sea duty. In another part of the grounds will be a life-saving exhibit, where rocket guns, surf boats and the famed breeches-buoy will be seen in active operation. In the exhibit of the insular possessions will be native Filipinos, natives of Guam, Hawaii and Porto Rico, who will live on the site in the manner peculiar to their countries, indulging in sports and pastimes of the distant climes, subsisting on foods strange to our palates and giving a complete example of all that is peculiar in these new territorial acquisitions.

The many and beautiful foreign buildings comprise the third group, and, as the best architects of the world have been in competition during their creation, the effect is a picture of grandeur.

The handsome edifices erected by the States and Territories of the Union form the fourth group, distinct by itself, on hills in the southeast section of the site. The largest of these is probably the Missouri Building, to build and equip which the State Legislature appropriated $1,000,000.

The fifth is what is known as the University Group—ten large structures of Tudor-Gothic architecture, which were leased by the Exposition Company from Washington University. These were used for administration and service purposes. In them will be sessions of international congresses, and in one the Lady Board of Managers will have absolute control. Near this group is a large athletic field, where the Olympic Games will be held.

Division sixth is the pike which in Chicago was called the Midway Plaisance. To cater to the taste of the millions of visitors amusement makers from all over the world have made their plans, and such a variety of entertainments as will be presented in 1904 has never been seen in one place since the world began.

Florida.

—

Capital:
TALLAHASSEE.

Florida has an area of 56,680 square miles, and in 1900 had a population of 528,542. In 1497 Sebastian Cabot is supposed to have sailed along the coast of Florida, and in 1513 Ponce de Leon sighted land and gave the country its name. In 1517 Hernandez de Cordova landed on the west coast, but was driven off by Indians, and in 1521 Ponce de Leon was fatally wounded in a fight with Indians near St. Augustine. In 1559 an unsuccessful attempt to found a colony at Santa Rosa was made by the Spaniards, and in 1562 a band of Huguenots under Jean Ribaut established a colony on the St. John's River. Fort Caroline was built by the French under Laudonniere in 1564. In 1565 St. Augustine was founded by an expedition under Menendez, and in the same year Fort Caroline was captured by the Spanish. In 1586 the Spanish were attacked by a punitive expedition under Domenique de Gourgues. In 1586 St. Augustine was attacked and burned by Sir Francis Drake, and in 1665 was pillaged by the English under Captain John Davis. In 1687 the first shipload of negro slaves was landed in Florida. Pensacola was settled in 1696. St. Augustine was again besieged by the English in 1702, and for six years hostilities between the Spanish of Florida and the English of Carolina continued. War between Spain and England was brought about in 1739 by the dispute regarding the boundary between the States. Florida was ceded to England in 1763 in return for Cuba, previously captured by the English. At the close of the Revolution Florida was re-ceded to Spain by England. The "Republic of Florida" was formed by immigrants from the United States in 1812. In 1814 Pensacola was occupied by British troops. The entire State was taken by the American troops in 1818, and in 1819 was purchased from Spain for $5,000,000. In 1822 the Territory of Florida was formed, with the capital at Tallahassee. From 1835 to 1842 occurred the Seminole War, which resulted in the removal of all but a few of the Indians to the west of the Mississippi.

Florida was admitted to the Union as a State in 1845. In 1861 the Ordinance of Secession was passed and the United States posts were seized by State troops. Jacksonville was occupied by Federal troops, the last occupation being permanent. In 1868 the Fourteenth Amendment was ratified by the State and civil government was re-established. Phosphate beds were discovered in Marion County in 1889. In 1894-1895 occurred the great freeze, by which millions of dollars' worth of fruit trees were destroyed.

Tobacco manufacturing ranks first among the industries of the State. More leaf tobacco enters the port of Tampa than at any other point in the United States. The raising of tropical and sub-tropical fruits is of second importance, and the manufacture of lumber and timber products ranks third. Phosphate mining and the manufacture of fertilizers are prominent industries.

The State Legislature met in April, and in his message the Governor recommended, among other important things, that the law requiring the payment of poll taxes—a prerequisite to voting at a primary election—be repealed; that a pure food law should be enacted; that there should be a geological survey of Florida; that counties adopt a free school book system, and that a law be enacted protecting forest trees.

Gov. William S. Jennings.

Events in 1903.—Senator S. R. Mallory was appointed to the United States Senate to succeed himself, his term expiring March 4, and the Legislature not going into session until April 7. For the first time since their enactment the Sunday laws were enforced in Pensacola on May 3. Hacks were not allowed on the streets, soda water and confectionery stands were closed, Sunday newspapers were not permitted to be sold, the only local Sunday paper circulating its issue before midnight. Only the railroad and street cars were permitted to run.

The entire fire department of Tampa went on a strike on account of the discharge of three men. The department demanded their reinstatement, and when this was refused the stations were abandoned. Policemen were placed in charge until other arrangements could be completed.

The Breakers, one of the largest hotels at Palm Beach, the famous Winter resort, was destroyed by fire on June 6. It was estimated that the orange crop for 1903 would exceed that of 1902 by about 1,000,000 boxes. On September 12 the southern part of the State was swept by a tornado of large proportions and considerable damage was done to buildings and crops.

Forest Preservation.

OVERTON W. PRICE,
of the
U. S. Bureau of Forestry.

The growth of public sentiment in favor of forest preservation in the United States has rapidly increased in the past few years, and interest in forestry is keener now than ever before. The present widespread interest in forestry is largely due to an offer made by the United States Department of Agriculture in 1898, through its Division (now Bureau) of Forestry, to give advice and assistance in the handling of forest lands. The purpose of this offer was to provide practical examples of improved treatment of private forest lands, in which the present interest of the owner and the protection and improvement of the forest should have equal weight. So far the applications of private owners in accordance with its terms cover 4,709,120 acres, and practical forestry is being applied, under conservative plans prepared by the bureau, as fast as the force of the bureau can take up the work. The Bureau of Forestry, at the request of the Secretary of the Interior, is also preparing working plans for the national forest reserves.

The Act of March 3, 1891 (26 Stat. 1,095), authorized the President to set aside public lands "wholly or in part covered with timber or undergrowth" as national forest reserves. The first of these reserves—the Yellowstone Forest Reserve, with an area of 1,239,040 acres—was proclaimed by President Harrison March 30, 1891, and fourteen additional reserves were created by him, the total area being 13,457,080 acres. Fourteen reserves were set aside by President Cleveland, with a total area of 25,891,200 acres, eleven of these, with an area of somewhat more than 21,000,000 acres, having been established upon the recommendation of a committee of seven appointed by the National Academy of Sciences, after an active examination of forest reserves, proposed and established, on the ground. This committee was appointed at the request of the Secretary of the Interior in February, 1896, to investigate and report upon the "inauguration of a rational forest policy for the forested lands of the United States,"

and upon the questions which underlie it. Twelve reserves, with a total area of 7,050,089 acres, were proclaimed by President McKinley, and thirteen reserves, with a total area of 13,764,156 acres, have been created by President Roosevelt. There are now fifty-four such reserves, with a total area of 60,162,525 acres, in the following States and Territories: Alaska, Arizona, California, Colorado, Idaho, Montana, Nebraska, New Mexico, Oklahoma, Oregon, South Dakota, Utah, Wyoming and Washington.

The inauguration of the forest reserve policy by the Government met with decided opposition, but there has been a radical change since the object of the reserves has been clearly understood, and public sentiment is now heartily in favor of them.

Forest Planting.—Until within a few years ago tree planting was limited to the unforested portions of the Middle West and a few localities in New England. It is now being carried on extensively throughout New England and other Eastern States, the Middle West and in the extreme Western States. This increased activity is largely due to the fact but recently learned that land of low agricultural value can be made profitable for the production of timber. The work is not confined to individuals, but is being participated in by both corporations and States.

The Bureau of Forestry has had much to do in spreading the interest in forest planting. Under its offer of co-operation with forest planters plans have been prepared for the planting of 6,474 acres, representing 172 localities in 29 States and Territories. In addition to work for the encouragement of private planting the bureau is planting extensively on certain of the forest reserves, particularly in Nebraska and California.

The general observance of Arbor Day has resulted in the extensive planting of shade and ornamental trees, and the educational influence of a day thus officially designated for tree planting has, without doubt, measurably influenced public sentiment toward both forest preservation and planting.

Forest Legislation.—The increased attention given to forestry by State Legislatures during the last few years is in accord with the recent advance made by the National Government in extending its reservations, and is in great contrast to the little or no consideration given to forestry during a previous long period. While from the earliest colonial days laws for the protection of forests have been passed, because of inadequate provision for their enforcement these laws have protected the forests but little. For the most part these laws provided penalties for the burning of woodlands and the protection of timber from theft.

Progressive forest laws have existed only within the past few years. The first of these was made in 1885 as a result of the adoption by New York of a forest-fire warden policy. Since then a number of States have framed their laws in accordance with New York's system, one of the earliest to take action being Maine, which passed its forest law in 1891.

New Hampshire has a similar law, and Minnesota, moved by the great loss of life and property caused by the Hinckley fire in 1894, adopted, in 1895, a forest law greatly resembling that of New York. The Minnesota law differs from the others in that it provides only for a forest-fire policy. This, however, surpassed the New York law in that, by the appointment of a chief fire warden, responsibility for the execution of its law was fixed in one officer. In 1901 New York amended its law by an act which, in addition to other important provisions, authorized the appointment of a chief fire warden. Besides being the first to adopt a forest-fire policy New York also leads in the size and importance of its forest reserve, having thus far set aside 1,370,928 acres.

In 1898 New York also established at Cornell University the first forest school in America. Since then forest schools have been established at Yale and at Biltmore, N. C.

Pennsylvania enacted important forest laws in 1897. In addition to grappling vigorously with its forest fire problem at that time it passed a significant act authorizing the purchase of three forest reservations of not less than 40,000 acres each upon the three principal river systems of the State in order to conserve the State's water supply. Under this and other acts it has acquired about 400,000 acres, and is still most actively engaged in forest work. Pennsylvania was the first to create a distinct State Forest Department, which was established in 1901.

In Michigan an act of 1899 created a permanent forest commission and provided for the withdrawal of some 60,000 acres of forest land. Wisconsin has also taken steps toward the adoption of an advanced forest policy.

The year 1901 is marked by notable forest legislation, in which Indiana took part by creating a State Board of Forestry, while Connecticut provided for the appointment of a State forester and purchase of lands for a State park.

Other States which, as a result of forest laws passed by them, are entitled to more or less important rank in the forest movement, are Kansas, Maryland, New Jersey, North Carolina, North Dakota, Oregon, West Virginia and Wisconsin.

The urgent need of the West for conserving its water supply for irrigation has resulted in important measures in this interest by different Legislatures. Notable for such action are Colorado and California. California is also taking steps to preserve portions of its Sequoia and other important forests, particularly through its forest and water associations, which outnumber those of any other State. Prominent among these are the California Water and Forest Association, the Sierra Club, the Forest and Water Society of Southern California and the Salt River Valley Water Supply Protective Association.

The part that associations have played in the forest movement of the United States is an important one. Of late there has been a great increase in the number and membership of these associations, coincident with the more general appreciation of the importance of forestry and the added interest in the preservation of the natural scenery in different parts of the country.

The Minnesota State Forestry Association, established in 1876, is the oldest association of the kind in existence in the United States. It was instrumental in bringing about numerous measures and encouraging settlement and tree planting in the West.

Another early association is the Pennsylvania Forestry Association, established in 1886. This society has taken an active part in the forest affairs of that State, and throughout its existence has published a paper, "Forest Leaves." In this State is also the Franklin Forestry Society of Pennsylvania, organized in 1898, which is, as well, working to create a more general interest in forestry.

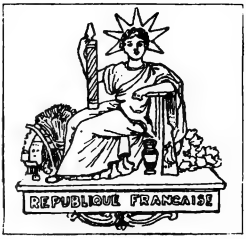
In New York is the New York State Fish, Game and Forest League, and in 1902 the Forestry-Water Storage and Manufacturing Association was organized in the interest of the forests and water supply. In New England are the Connecticut Forestry Association, organized December, 1896; the Massachusetts Forestry Association, incorporated June, 1898, and the Society for the Protection of the New Hampshire Forests, established in 1901.

In the West, besides those already mentioned, are the Colorado State Forestry Association, established in 1884; the Washington Forestry Association, which held its first annual meeting in 1897; the North Dakota State Sylvaton Society; while in Oregon are found the Oregon Forestry Association and "The Mazamas." In 1902 the Wyoming State Forest Association was organized.

In the Middle West are the Nebraska Park and Forest Association, established in 1899, and the Iowa Park and Forest Association, established in 1901. The Indiana Forestry Association was dissolved in May, 1901, to make way for the larger International Society of Arboriculture.

In the South the North Carolina Forestry Association and the Tennessee Forest Association indicate the interest manifested in forestry.

In Washington, D. C., the Society of American Foresters was organized in 1900. Its members consist of professional foresters and of those who have materially aided the cause of forestry.



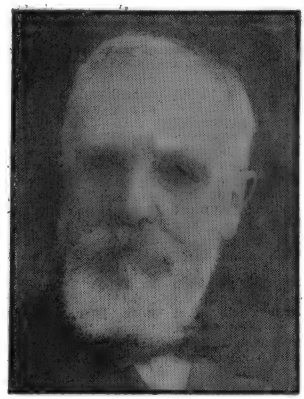
The American Forestry Congress, organized in 1882, was the first national forest organization created. From this grew the American Forestry Association, which has been very influential in arousing public interest in forestry, and also in influencing State forest legislation. It has aided in bringing about such action in Congress as resulted in the adoption of a national forest policy. Its official organ has been "The Forester," which, in January, 1902, gave place to "Forestry and Irrigation."

Forestry in the Philippines.—The Insular Bureau of Forestry has carried on considerable work in the Philippines during the last year. Manila consumes almost all of the lumber brought to market, and in spite of the encouragement given to the exploitation of forest lands, the price of timber is still high. The forest area of the archipelago is estimated at 48,112,920 acres. Large numbers of gutta percha and rubber trees have been discovered, and the aid of the bureau has been called to preserve them from clandestine trade. A government monopoly on the products of these trees has been suggested as a means of preventing their destruction, the caring for them to be carried on scientifically. The chief of the Bureau of Forestry of the United States Department of Agriculture has recently visited the islands.

France.

Capital:
PARIS.

France has been under a republican form of government since the overthrow of Napoleon III., on September 4, 1870. The present President of the republic, M. Emile Loubet, was elected February 18, 1899. The next Presidential election will be held in 1906.



The Ministry. — The Ministry is now composed as follows: President of the Council, Minister of the Interior and of Public Worship, M. Combes, Senator; Minister of Finance, M. Rouvier, Deputy; Minister of Foreign Affairs, M. Delcasse, Deputy; Minister of War, General Andre; Minister of Marine, M. Camille Pelletan, Deputy; Minister of Colonies, M. Doumergue, Deputy; Minister of Public Instruction, M. Chaumie, Senator; Minister of Justice, M. Valle, Senator; Minister of Commerce, M. Trouillot, Deputy; Minister of Agriculture, M. Mougeot, Deputy; Minister of Public Works, M. Maruejouls, Deputy; Under Secretary for Posts and Telegraphs, M. Berard.

The Nation.—Under the Constitution, adopted in 1875, the Republic of France is governed by a President, who is elected for seven years by the two legislative houses, the Senate and the Chamber of Deputies. In these latter the legislative power solely resides. The executive vests jointly in the President, the two Houses and the Ministry, which act as a check upon each other. The responsible head, however, is the Premier, or President of the Council, who, in co-operation with the President, appoints the Ministry.

In France all religions are equal under the law, and any religion having 100,000 adherents is entitled to a State grant. In matters of justice the criminal courts of the first instance are those of the justices of the peace. Over these there are the courts of assizes and twenty-six courts of appeal, with one final court of cassation. In civil causes the scheme is similar, but with the addition of a lower civil tribunal under the justices of the peace, and the system is unique in including tribunals of commerce and councils of experts for commercial cases.

France possesses 1,760 miles of coast frontier and 1,575 of land. Paris, the centre of defense, is surrounded by a wall, with thirty-eight new forts and batteries, seventeen old forts and nearly one hundred bastions. At St. Denis and Versailles these defenses merge into two entrenched camps.

President Emile Loubet.

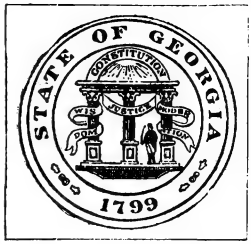
In finance the budget estimate for 1903 included: Revenue, $710,975,363; expenditures, $710,879,660. On January 1, 1902, the public debt amounted to $5,788,437,765, in addition to a floating debt of $226,346,982.

Events in 1903.—The disturbances attendant upon the closing of the religious schools, begun in the Summer of 1902, were continued during the early part of the year. Minister Combes's programme for the expulsion of certain religious orders and the secularizing of all education was carried on, and many proscribed orders were driven from the country. The petition of the Carthusian monks, among other applications, to remain in the country, was refused, and as a result the famous monastery of La Grande Chartreuse was closed, the order emigrating to Austria. Exiled monks of various orders found refuge in adjacent countries, some coming even to America. A respite was given the famous shrine of the Lourdes Grotto. Much displeasure and open resistance were shown by the peasantry, and when Minister Combes made a trip to Treguier, Brittany, in September, his passage through the villages was a signal for a general demonstration against him and his anti-clerical policy.

On September 1 the new French Sugar law went into effect, suppressing direct and indirect bounties on beet sugar. This brings the profit on raising the beets and the manufacture of sugar so low that it was thought to be in danger of prohibiting the industry. On January 13 M. Leon Bourgeois was re-elected President of the Chamber of Deputies. A tax of 25 cents on petroleum was proposed as one of the measures for meeting the budget deficit for 1903, when the question was brought up in the Chamber of Deputies in February. A bill to reduce the period of army service to two years met with favor when presented before the Senate in February.

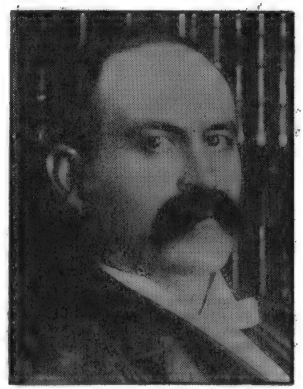
Former Captain Alfred Dreyfus appealed in April to the Minister of War, asking for a new inquiry, to bear upon a document claimed to have been discovered by M. Jaures. The people of the ports of Brittany were in danger of famine in January, owing to an unexplained departure of the sardines from the coast. On August 10 two trains of the Metropolitan Electric Railway, the Paris subway, collided, and were set on fire. About 90 persons lost their lives by suffocation, the smoke finding no outlet. Strikers caused rioting at Hennebont, Department of Morbihan, on the Bay of Biscay, on August 6, and troops were ordered to protect property. On August 22 the Humberts, swindlers on a gigantic plan, were convicted by the Court of Assizes at Paris. In September bubonic plague developed at Marseilles, brought from Constantinople. Immediate steps were taken to stamp it out. A storm which swept the English Channel on September 11 caused considerable damage to shipping along the French coast.

The Colonies.—The most important French colonies are Tunis and Algeria. Tunis is attached to the Ministry of Foreign Affairs, while Algeria is really considered a part of France. Senegal, Madagascar and Indo-China are perhaps the next most important. The administration of affairs in the colonies is marked by liberality of policy, many of the older colonies, like Guiana, Senegal, French India, Cochin-China, etc., sending representatives to the French Legislature. The colonies are not a source of income to France, however, few of them having an income sufficient for the cost of administration. In the budget of 1903 the expenditures for the colonial service were estimated at $22,509,366, while the revenues for the same period were estimated at $3,312,990, which is a larger figure than usual. The total value of colonial exports for 1901 was $72,901,696, while the imports for the same period amounted to $94,922,195.



The following is the statistical statement of the French colonial possessions:

Colonies.	Area Sq. M.	Population.
Asia:		
India	196	273,000
Annam	52,100	6,124,000
Cambodia	37,400	1,500,000
Cochin-China	22,000	2,968,600
Tonquin and Laos	144,400	7,641,900
Africa:		
Algeria	184,474	4,739,300
Tunis	51,000	1,900,000
Western Sahara	1,544,000	2,550,000
Senegal	80,000	1,800,000
Senegambia and Niger	210,000	3,000,000
French Guinea	95,000	2,200,000
Ivory Coast	116,000	2,000,000
Dahomey	60,000	1,000,000
Congo	1,160,000	10,000,000
Somali Coast	45,000	200,000
Reunion	966	173,200
Comoro Isles	620	47,000
Mayotte	140	11,640
Madagascar, etc	227,950	2,505,240
America:		
Guiana	30,500	32,910
Guadeloupe, etc	688	182,110
Martinique	380	203,780
St. Pierre and Miquelon	92	6,250
Oceania:		
New Caledonia, etc	7,650	51,410
Other oceanic possessions	1,520	29,000
Totals	4,072,076	51,139,340



Georgia.

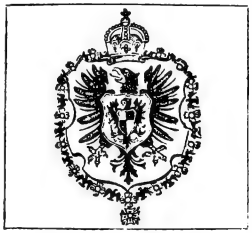
—

Capital:
ATLANTA.

Georgia has an area of 59,475 square miles, and by the census of 1900 had a population of 2,216,331. Georgia is one of the thirteen original States, the last of them to be settled. Previous to 1733 the country lying within its boundaries was a wilderness, and, while comprehended within the boundaries of the Carolinas, was claimed by both Spain and England. By a patent of June 9, 1732, George II. granted the territory to a corporation which was organized for the purpose of colonizing the section. In 1733 General James Oglethorpe explored the country and purchased a large tract of land from the Creeks. Savannah was founded and the first settlement begun. In 1739 war broke out between Spain and England, and General Oglethorpe was appointed in command of the South Carolina and Georgia troops. He failed in an expedition against St. Augustine, and in 1742 the Spaniards retaliated and took several forts. They became frightened by a strategy of Oglethorpe, however, and sailed again for Florida. In 1750 the restrictions on slavery were removed, and in 1752 Georgia became a royal colony. Beginning about 1763, the colony began to make rapid progress, and soon became noted for its prosperity.

Governor Joseph M. Terrell.

In July, 1775, the colony gave its sanction to the measures of the Continental Congress and appointed delegates to that body. During the Revolutionary War Georgia was overrun by British troops. In 1778 Savannah was captured, and in 1779 Augusta and Sunbury. Georgia framed its first constitution in 1777, the second in 1789 and a third in 1798. The Constitution of the United Sttaes was ratified January 2, 1788. On January 19, 1861, a convention at Milledgeville passed the Ordinance of Secession, and delegates to the Congress of the Confederate States were appointed. Except upon the coast Georgia was not the theatre for any large conflicts during the Civil War until 1864. Atlanta was captured by Sherman, September 1, 1864, and during November the towns on the line of his march to the sea suffered much. In 1870 Georgia ratified the Fifteenth Amendment.



Attempts to block negro education in Georgia failed in the Legislature. A resolution was offered July 6 calling for a distribution of State public school funds according to the taxes paid by the races. As the blacks pay only one-fifteenth of the taxes in the State the passage of this resolution would have shut off nearly the entire negro population from public education. The "Audubon" bill, for the protection of song birds, was passed with but little opposition. No part of the plumage, skin or body of any bird protected by the act may be sold or offered for sale within the State, nor shall any such bird be caught or killed. A petition was presented to the Legislature on June 25, signed by negroes of Savannah and adjacent territory, asking that the Legislature appropriate money to send them back to Africa.

In May the Grand Jury brought out revelations regarding a peonage system being carried on in some sections of the State, and several prominent men, among them a member of the Legislature, were accused of permitting actual slavery in the convict camps. A tornado struck Gainesville and the neighboring country on June 1 and caused the loss of about 100 lives and nearly $1,000,000 damage to property. Work on mapping the areas adjacent to the undeveloped water powers of the State was begun in April, with the intent of encouraging manufacturing enterprises. Careful surveys are being made of all the important streams in the State, and topographic maps will be prepared, showing the falls, the position of the banks and islands and contour maps of possible sites for dams.

German Empire.

—

Capital:
BERLIN.

The kings of Prussia are descended from Count Thassilo of Zollern, who was one of the generals under Charlemagne, and it was his successor, Count Frederick I., who built the family castle of Hohenzollern, in 980 A. D. In 1273 Frederick III. became a Prince of the Holy Roman Empire and received the Burggraviate of Nuremburg in fief. In 1415 the property of the family was increased by the addition of the province of Brandenburg, and two years later Count Frederick IV. was given the rank of Elector. In 1511 Margrave Albrecht, a younger son of the House of Hohenzollern, was elected Grand Master of a large province in Prussia, and a few years later he declared himself hereditary prince. The early extinction of his male line, however, brought the province to the control of the Electors of Brandenburg, who already occupied an important position in northern Germany. Under the wise rule of Frederick William (1640-1688) the Hohenzollerns prospered greatly, and the Great Elector left his house so well established that his son, Frederick I., was able to assume the kingly crown January 18, 1701. From that day the Hohenzollerns have steadily increased in wealth and strength, and while under Frederick William III. nearly one-half the State was taken by Napoleon, the Congress of Vienna not only remedied the loss, but added still more territory, including part of the Kingdom of Prussia, the Rhineland and Swedish Pomerania, making a vast domain, which was shaped into a compact State by the war of 1866.

The election of Wilhelm I., King of Prussia, as German Emperor in 1871 was by the vote of the Reichstag of the North German Confederacy, and upon his acceptance of the dignity the imperial office became hereditary in the House of Hohenzollern. Wilhelm, "Der Grosse," reigned until 1888, when he was succeeded by his son, Frederick, who lived but a few weeks. Frederick's eldest son, the present Emperor, Wilhelm II., was born January 27, 1859. On February 27, 1881, he married Princess Victoria of Schleswig-Holstein-Sonderburg-Augustenburg (born October 22, 1858), daughter of the late Duke Frederick.

The Heir Apparent.—The heir apparent to the German throne is Prince Frederick William, born May 6, 1882, the eldest son of the present Emperor-King.

The Ministry.—The Imperial Secretaries of State of Germany do not form a ministry or cabinet, but act independently of each other under the general direction of the Chancellor of the Empire. They are as follows: Chancellor of the Empire, Count von Bulow; Minister for Foreign Affairs, Baron von Richthofen; Imperial Home Office, Dr. von Posadowsky-Wehner; Imperial Admiralty, Herr von Tirpitz; Minister of Justice, Herr Nieberding; Imperial Treasury, Dr. Freiherr von Thielmann; Imperial Post Office, Herr Kraetke; Imperial Railways, Dr. Schulz; Imperial Exchequer, Herr Magdeburg; Imperial Invalid Fund, Dr. Rosing; Imperial Bank, Dr. Koch; Imperial Debt Commission, Herr von Hoffmann.

The Nation.—By the Constitution of the Empire, dated April 16, 1871, the several States of Germany are bound into a perpetual union with the King of Prussia as the Deutscher Kaiser. The Kaiser's absolute power is much restricted, as he only has the right to declare defensive war, make peace, enter into treaties and appoint and receive ambassadors. In other matters he acts in connection with the Bundesrath, composed of fifty-eight members, who are appointed by the States each session, and the Reichstag, composed of 397 members, elected by universal ballot for five years each. Of all the States of the empire Alsace-Lorraine alone is without vote in the Bundesrath. The Kaiser has no legislative veto.

The German Emperor.

Religious liberty is constitutionally provided for, but the relation between the Church and State differs in various parts of Germany. The Order of Jesuits was until recently prohibited, and convents and religious orders (unless medical or purely contemplative) are suppressed by law. Education is compulsory between the ages of six and fourteen years throughout the empire. There is also a thorough system of academic and preparatory schools, and working children are compelled to attend night schools.

One judicial system prevails throughout the empire, and pauperism is relieved under laws enacted by each State, but all are based on national enactment. The system of finance includes the operation of telegraphs and railways, and the profit from these, with the revenue from customs, excise and posts, is devoted to the payment of the common expenditures, each of the States being assessed sufficiently to make up any possible deficit. Germany has a frontier of 4,570 miles, and the empire is divided into ten fortress districts fortified with seventeen first-class and nineteen other fortresses. The general composition of the empire is as follows:

amounting to $18,175,000, was attributed to the competition of American industries. The United States seemed to appear a danger cloud to German politicians during the entire year and in January it was voted to abandon the "most favored nation" treaties with this country. The new tariff law, which went into effect in May, put a bar to the importation of American apples except in bulk. Count von Ballestrem resigned the Presidency of the Reichstag on January 23, in consequence of disapproval shown against his attitude in relation to an attempt to start debate against the Kaiser in regard to the Krupp scandal. On January 29 he was re-elected. General von Gossler, Prussian War Minister, resigned his post on May 7, on account of ill health.

In the election for members of the Reichstag, held in June, the Socialists gained twenty-five seats in the legislative body. The Clericals lost slightly in their representation. The Navy Department gave out designs for several new battleships in February to be modelled after the United States vessel Alabama. Five new battleships are under construction. The Government decided in February to readmit to the country the Jesuits, who had been excluded since 1872. A Catholic theological faculty has been established at the University of Strasburg in spite of opposition on the part of the anti-clericals.

Accompanied by her brother, Archduke Leopold of Tuscany, and a tutor named Giron, Crown Princess Louise of Saxony fled from Salsburg on December 12, 1902. The Princess was divorced from her husband, Prince Frederick August, and stripped of her titles and rank. In March she regained her title of Princess Louise of Tuscany. On May 4 she gave birth to a daughter.

The Polish question was debated in the Prussian Diet in February. It was claimed that the payment of premiums made their recipients creatures of the

*1900. †Railway debt only. ‡For period of two years. §For period of three years. ‖No general budget. ¶Includes State and Empire.

Events in 1903.—Germany's attitude in the Venezuela matter, especially her coalition with Great Britain, was subject to considerable comment by opponents of the Government, and needed active defense in the Reichstag. The thanks of the Government was offered the United States for acting as an intermediary in settling the question. The German Government pledged itself to come to the rescue of German tobacco manufacturers in their fight against the American Tobacco Trust. Interest was revived in the Reichstag in January over the question of payment of members. It is said that many of the members who live at a distance from the capital feel keenly the cost of travel and city living. Some of the political parties have arranged for the payment of their members' expenses, but a general salary to all members has been opposed on the ground that it would tend to create professional politicians. The Prussian deficit, central authorities and tended to increase the distrust of the Poles. It was maintained, however, that in order to keep the union intact it was necessary to use all means of strengthening the German element in the eastern provinces.

A travelling university with a faculty of surgery and general medicine was established in March, to be an aid to the country physicians located too far from the great university centres to profit by their lectures. In the German universities in the Summer of 1903 there were 2,731 foreign students, of which 276 were from the United States. Severe earthquake shocks were felt in Saxony on March 6. Emperor William visited Italy in May and was received with enthusiasm in Rome and the other cities he visited. Extensive preparations were being made during the year for the German exhibit at the St. Louis Exposition.

The Colonies.—The most important German colonies are those in Africa—Togoland, Kamerun and German East and Southwest Africa. The first and last named of these possessions are governed by an Imperial Commissioner, the other two by an Imperial Governor. The possessions in the Pacific are more numerous and less extensive, amounting in all to about 96,000 square miles. In Asia Germany has a foothold of about 200 square miles in Kiauchau Bay, which, while a seizure from the Chinese Empire, is guarded about by many treaties, concessions and agreements with China and the several European Powers. It is of great strategic and commercial importance because of its situation, its fine harbor and its proximity to vast coal fields, which will offer a base for naval supplies.

The following is a list of the colonies and dependencies:

THE GERMAN COLONIES: THEIR AREA, POPULATION AND FINANCIAL CONDITION.

Possessions.	Area Sq. M.	Population.	Estimated Revenue.	Estimated Expenditure	Approximate Imports.	Approx. Exports.

King of Saxony.

The Regent of Bavaria.

King of Wurtemberg.

RULERS OF THREE GERMAN KINGDOMS.

WURTEMBERG.

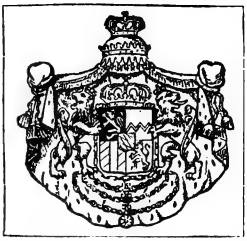
—

Capital:
STUTTGART.

Prior to the Peace of Pressburg, in 1805, Wurtemberg was a duchy and electorate. By the decree of January 1, 1806, however, it became a kingdom. The present ruler, Wilhelm II., ascended the throne upon the death of King Charles I., October 6, 1891. He is the son of the late Prince Frederick (cousin of the late King) and the late Princess Katherine, the sister of King Charles. He first married Princess Marie of Waldeck-Pyrmont, who died April 30, 1882, and on April 8, 1886, he married Princess Charlotte of Schaumburg-Lippe. By his first marriage he had one daughter, Princess Pauline, born December 19, 1877, and married, October 29, 1898, to Prince Friedrich of Wied.

The Heir Presumptive.—Duke Nicolaus of Wurtemberg, who was born March 1, 1833, and who married the late Duchess Wilhelmine of Wurtemberg, May 8, 1868, is the presumptive heir to the throne.

The Ministry.—The Ministry is constituted as follows: President, Dr. von Breitling; Minister of the Interior, Dr. de Pischek; Minister of Finance, Dr. de Zeyer; Minister of Foreign Affairs, Baron de Soden; Minister of Public Instruction and Worship, Dr. de Weizsacker; Minister of War, Lieutenant-General de Schnurlen.



The State.—Wurtemberg, a constitutional hereditary monarchy, is one of the four kingdoms included in the German Empire. Under its constitution, which bears date of 1819, the executive of the kingdom vests in a Ministry of State of six departments, while the legislative authority is held by the Landstande, which comprises an upper and a lower chamber, both of which convene every three years. When the chambers are not in session, however, they are represented by a committee of three members from the upper and nine from the lower house.

Wurtemberg is an agricultural State, with 2,948,900 acres under cultivation. Of its population 69 per cent are Protestants and 29 per cent Catholics. Under the Constitution the King is the supreme director of the Evangelical Protestant Church.

Education in Wurtemberg is compulsory, and, according to the official returns, there is no illiteracy in the kingdom above the age of ten.

BAVARIA.

Capital:
MUNICH.

The members of the reigning house of Bavaria are descended from the ancient Counts of Wittelsbach, who held a high position during the twelfth century. Duke Maximilian I. of Bavaria was made Elector of the Holy Roman Empire in the Thirty Years' War, and Elector Maximilian Joseph was elevated to the rank of king by Napoleon in 1805. According to the present Constitution, which was adopted in 1818, the crown is hereditary in the male line.

The present king, Otto, was born April 27, 1848, and succeeded his brother, Ludwig II., when that insane monarch committed suicide by drowning himself in the lake at Starnberg, June 13, 1886. Shortly after his accession King Otto also developed indications of insanity, and it was at last found necessary to confine him in one of the royal chateaux. A regency was, therefore, established, with Prince Luitpold, the King's uncle and the heir apparent to the throne, as Regent.

Prince Luitpold was born March 12, 1821, and was married, April 15, 1844, to Archduchess Augustine of Tuscany, who was born in 1825 and died in 1864. They had four children.

The Heir Presumptive. — The heir presumptive to the throne is, Prince Louis (Ludwig), the eldest son of the Regent. He was born January 7, 1845, and on February 20, 1868, was married to Archduchess Marie Theresa of Austria. They have had ten children.

The Ministry. — The Ministry is constituted as follows: President of the Council and Minister of Foreign Affairs, Count de Crailsheim; Minister of Finance, Baron de Riedel; Minister of the Interior, Baron de Feilitzsch; Minister of Justice, Baron de Leonrod; Minister of War, Baron d'Asch; Minister of Worship, Baron C. de Podewils-Durnitz.

The State.—Bavaria is, in size and population, the second kingdom in the German Empire. Its government is a constitutional monarchy, the King having sole executive power and exercising the legislative functions jointly with a Parliament, which is divided into an upper house, the Reichsrathe, or House of Lords, and a lower house, the Chamber of Representatives, composed of elected Deputies.

School attendance is compulsory in Bavaria for all between the ages of six and fourteen, and excellent schools are maintained in all parishes.

SAXONY.

Capital:
DRESDEN.

The royal house of Saxony is one of the oldest reigning families in Europe, and while in its early days the house spread into numerous branches, all are still represented by such ducal families as Saxe-Altenburg, Saxe-Coburg-Gotha, Saxe-Weimar and Saxe-Meiningen. The Albertine line, which is the younger branch, is now represented by the rulers of the Kingdom of Saxony. On the death of King Albert, 1902, the throne passed to his brother, Prince George, who was born August 8, 1832, and was married to Infanta Maria Anne, daughter of King Ferdinand of Portugal, May 11, 1859. She died February 5, 1884.

The Heir Apparent.—The heir apparent to the throne is Prince Friedrich August, who was born May 25, 1865. On November 21, 1891, he married Princess Louise Antoinette Marie of Austria. They were divorced in 1903.

The Ministry.—President of the Council and Minister of the Interior and Foreign Affairs, G. Metzsch de Reichenbach; Minister of Public Instruction and Worship, Dr. P. de Seydewitz; Minister of Finance, Dr. W. Ruger; Minister of Justice, Dr. Otto; Minister of War, Baron de Hausen.

The State. — The Kingdom of Saxony is one of the four comprised in the German Empire. Legislative functions repose in the King and Parliament jointly, the latter consisting of two chambers, an upper house of hereditary and appointed members and a lower house of thirty-seven deputies of towns and forty-five representatives of rural communes. The executive vests in the King and the Ministry.

Saxony is unquestionably one of the busiest and most progressive of German states. Textile manufactures form the leading branch of industry; its mining interests are important, and the State is highly cultivated. Public instruction follows the scheme of compulsory education common throughout the empire, and the rate of illiteracy is extremely small.

Gifts and Bequests.

Gifts to educational institutions, to municipalities for the general good, and to charity, in 1903, have amounted to millions of dollars, to more than the cost of second-rate war. Taking the form of money donations, of buildings for colleges, of libraries and hospitals, the aggregate has been tremendous, and, distributed as it is over the entire country, there is scarcely a section which has not felt the benefits. Some have been purely aesthetic, helping to realize the artistic side of life and to furnish the beautiful as well as the useful. To the University of California William Randolph Hearst gave a Greek amphitheatre, modelled almost exactly after the Dionysian Theatre at Epidarus, in Greece. This was dedicated on September 24, with appropriate ceremonies, among which was a presentation of a part of Aristophanes's comedy, "Birds." To Harvard the class of 1879 has given a stadium, a reproduction of the type of Roman stadium used for athletic games.

In amounts Andrew Carnegie and John D. Rockefeller stand first on the list of public benefactors of the year. In less than a year the former has given more than $10,000,000 to found libraries, and the latter has given nearly as much toward educational institutions and to the betterment of Young Men's Christian associations in various parts of the country. Henry Phipps, a former partner of Andrew Carnegie, has been a large giver, his donations taking the direction of hospitals, and especially of a hospital for consumptives. Hundreds of others have been proportionately as generous.

The following are among some of the most important gifts and bequests of the year:

Anderson, Mrs. Elizabeth M.—Presented land valued at $1,000,000 to Barnard College on condition that it be occupied by college buildings and dormitories. It is to be known as the "Milbank Quadrangle."

Appleby, Mrs. Cornelia Day Wilder.—Under her will the bulk of her estate, amounting to more than $1,000,000, was left in trust to be invested for the benefit of the worthy poor of St. Paul, Minn. The fund is to be known as "The Amherst H. Wilder Charity."

Banker, Mrs. Ellen Josephine.—Under her will the sum of $10,000 was left to Columbia University to found a scholarship in memory of her brother, Cornelius Heeney Gottsberger, and $25,000 to the Society of the New York Hospital for the benefit of Bloomingdale Asylum.

Belmont, August.—Gave $50,000 to endow St. George's Episcopal Church at Hempstead, and $1,000 toward the erection of a parish house for the church.

Carnegie, Andrew.—Continued his philanthropic work during the year, the following being among his

most noteworthy gifts: The offer of $1,500,000 to the city of Philadelphia for the establishment of thirty branch libraries; a further gift of $150,000 to the endowment fund of the Laboratory of Engineering at Stevens Institute of Technology; $200,000 for a free library at Columbus, Ohio; $250,000 for the enlargement of the buildings and classrooms of the school department of the Mechanics and Tradesmen of the City of New York; $12,000 toward the fund for the erection of the new Emerson Hall at Harvard University; $2,000 for the purchase of books required by the New York Botanical Garden; $600,000 as an endowment fund for the benefit of the Tuskegee Normal and Industrial Institute; $100,000 to Hamilton College, Clinton, N. Y.; $250,000 for the establishment of seven branch libraries in Cleveland, Ohio; $35,000 for a new library at Mansfield, Ohio; $1 550,000 for the enlargement of the Carnegie Library in Pittsburg, while the sum of $48,000 was disbursed to the sick and helpless during the year by the Andrew Carnegie Relief Fund, which was established in 1902. In addition to these gifts, Mr. Carnegie sent a check for $1.500,000 to be devoted to the construction of a Palace of Peace and the establishment of a library for the benefit of the International Arbitration Tribunal at The Hague.

Clark, Jonas G.—According to the decree of the Probate Court of Worcester, Mass., the sum of $2,000,000 left under the will of Mr. Clark was placed at the disposal of Clark University.

Cornell University.—The sum of $150,000 was collected for the establishment of a fund for the pensioning of Cornell professors.

Crane, Mrs. Rachel B.—Gave $300,000 for the benefit of the mission boards of the Presbyterian Church of the United States.

Eaton, Dorman B.—Under his will $100,000 was given to Columbia University for the establishment of the Eaton professorship of administrative law and municipal science.

Germany, Emperor William of.—A collection of casts valued at $1,250,000 was presented to Harvard University by the Emperor of Germany.

Hendricks, Mrs. Eliza S.—Gave $25,000 to Hanover College, Madison, Ind., for the erection of a memorial to her husband, ex-Vice-President Thomas A. Hendricks.

Hoyt, Colgate.—Gave $20,000 to Brown University, Providence, R. I., for the construction of a swimming pool.

Iselin, Adrian.—Gave $30,000 for the erection of a church and parish house for the Italian Catholics of New Rochelle, N. Y.

Jesup, Morris K.—Gave $25,000 to Tuskegee Normal and Industrial Institute and a similar amount to the Hampton Normal and Agricultural Institute for the benefit of the endowment funds of these institutions.

Kimball, Mrs. David P.—Gave $25,000 to Wellesley College for the establishment of a fund to be known as "The Alice Freeman Palmer Fellowship."

Laverack, William D.—Under his will the sum of $100,000 was divided among several of the charitable institutions of Paterson, N. J.

Loubet, Duc de.—Gave $100,000 to Columbia University for the establishment of a chair of archaeology.

Marie, Peter.—Under his will the sum of $25,000 was left to four of the charitable institutions of New York City.

Maxwell, J. Rogers.—In March he announced that he would erect a new building for the use of the Long Island College Hospital at a cost of $1,000,000. It is to be a memorial to his brother, Henry W. Maxwell.

Millikan, James.—Gave an additional $100,000 to the endowment fund of Millikan University, Decatur, Ill.

Mother Mary Katherine.—Has acquired land in South Dakota for the establishment of an Indian school and sanitarium. Mother Mary Katherine, who was formerly Miss Katherine Drexel, of Philadelphia, is the founder of the Roman Catholic Order of the Blessed Sacrament.

Pearsons, Dr. D. K.—Gave $50,000 to Rawlings College, Winter Park, Fla., and $25,000 to Kingfisher College, Oklahoma.

Phipps, Henry.—Gave $1,250,000 for the establishment of a hospital for consumptives at Philadelphia; $10,000 for the benefit of the New York City Educational Alliance, and $10,000 to be devoted to some practical purpose for the improvement of conditions in India.

Reid, Daniel G.—Gave $50,000 to St. Stephen's Hospital, Richmond, Ind., to be used in the erection of a new building.

Reinhard, Moses.—Under his will the sum of $40,000 reverted to various Jewish charitable institutions of Philadelphia.

Rockefeller, John D.—Continued his munificences during 1903, the following being some of his most important gifts: $1,200,000 for an institution for medical and pathological research; $1,000,000 for the promotion of the work of the General Educational Board; $110,000 for Rochester Theological Seminary; $100,000 for the building fund of the Brooklyn Y. M. C. A.; $66,000 toward the construction of a new building for the University of Nebraska; $60,000 for Dennison College, Newark, Ohio; $50,000 to enlarge and equip the Y. M. C. A. building in Washington, D. C., and $10,000 toward the erection of the Salvation Army building in Cleveland, Ohio.

Rockefeller, Mrs. John D., Jr.—Gave $10,000 to the Young Women's Christian Association of Providence, R. I.

Rogers, Jacob S.—By a withdrawal of the legal contest of the will of Mr. Rogers, a sum of more than $5,000,000 was placed at the disposal of the Metropolitan Museum of Art.

Schwab, Charles M.—Purchase of land for health resort on Staten Island and construction of $135,000 steamer, all for use of poor children of New York.

Smith, Lyman G.—Presented three buildings in Syracuse to Syracuse University.

Thomas, Mrs. Samuel.—Gave $50,000 to the Manhattan Eye, Ear and Throat Hospital, to endow a ward of ten beds to be known as "The Samuel Thomas Memorial Ward."

Thompson, Mrs. Frederick F.—Gave $350,000 to the Teachers' College of the City of New York for the construction and equipment of a building for the study of physical education and school hygiene.

Vanderbilt, Mrs. Cornelius.—Erected a memorial ward at the Newport, R. I., Hospital, in memory of her husband. It is estimated that the total cost will be about $250,000.

Vanderbilt, F. W.—Is erecting a new dormitory for the Sheffield Scientific School of Yale University. Its probable cost has not been announced, but it is intended that it shall be one of the finest academic halls in the country.

Van Shaick, Miss Alida.—A large portion of her estate, amounting to about $500,000, was apportioned among the various institutions of the Reformed Church in the United States.

Walsh, Mrs. Ann Eliza.—Gave $450,000 for the establishment of a fund for the education of candidates for the priesthood of the Roman Catholic Church.

Welles, John S.—Under his will, $12,000 was left for the aid of deserving students in the Yale Divinity School.

Winthrop, Mrs. Mary J.—Under her will more than $2,000,000 was left to the Theological Seminary of the Presbyterian Church at Princeton, N. J.

Great Britain.

—

Capital:
LONDON.

The right of Edward VII. to the throne of England rests upon the statute by which the succession to the crown of Great Britain and Ireland was vested upon Princess Sophia of Hanover and "the heirs of her body, being Protestants."

The present ruler, "Edward VII., by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions Beyond the Seas, King, Defender of the Faith, Emperor of India," as his title was declared under the Royal Title Act, proclaimed November 4, 1901, was born November 9, 1841, and succeeded to the throne on the death of his mother, Queen Victoria, January 22, 1901. On March 10, 1863, he married Princess Alexandra, the eldest daughter of King Christian IX. of Denmark.

The Heir Apparent.—The heir apparent to the throne is the eldest son of the King, George Frederick, Prince of Wales, Duke of Cornwall and York, and Duke of Rothsay, in Scotland. He was born June 3, 1865, and married July 6, 1893.

The Ministry.—The new Ministry is constituted as follows:

Office.	Name.	Office.	Name.
In the Cabinet:		Third Junior Lord of the Treasury	H. W. Forster.
First Lord of the Treasury and Lord Privy Seal	Arthur Jas. Balfour.	Financial Sec'y to the Treasury	Hon. Ralph D. Eliot.
Lord High Chancellor	Earl of Halsbury.	Parliamentary Sec'y to Treasury	Sir Archibald A. Hood.
Lord President of Council	Marquis of Londonderry.	Paymaster-General	Duke of Marlborough.
Home Secretary	Mr. Akers-Douglas.	Judge-Advocate-General	Sir Francis Jeune.
Foreign Secretary	Marquis of Lansdowne.	Civil Lord of the Admiralty	Mr. Prettyman.
Colonial Secretary	Alfred Lyttelton	Secretary to the Admiralty	
Secretary for War	H. O. Arnold-Foster.	Financial Sec'y for the War Office	
Secretary for India	W. St. John Brodrick.	Attorney-General	Sir Robert Finley.
First Lord of the Admiralty	Earl of Selborne.	Solicitor-General	Sir Edwin Carson.
Chancellor of the Exchequer	J. Austen Chamberlain.	Lord Advocate for Scotland	
Lord Chancellor of Ireland	Lord Ashbourne.	Solicitor-General for Scotland	Scott Dickson.
Chief Secretary for Ireland	George Wyndham.	Lord Lieutenant for Ireland	Earl of Dudley.
Chief Secretary for Scotland	Andrew Graham Murray.	Attorney-General for Ireland	John Atkinson.
Pres't of the Board of Trade	Gerald Balfour.	Solicitor-General for Ireland	Mr. Campbell.
Pres't of the Local Gov't Board	Walter Long.	Under Secretaries of State:	
Pres't of the Board of Agriculture	Rob't Wm. Hanbury.	For the Home Office	Mr. Cochrane.
Pres't of the Board of Education.		For the Foreign Office	Viscount Cranborne.
Postmaster-General	Lord Stanley.	For the Colonial Office	Earl of Onslow.
Not in the Cabinet:		For the War Office	Earl of Hardwicke.
Chancellor Duchy of Lancaster	Sir Wm. Walrond.	For Indian Affairs	Earl Percy.
First Commissioner of Works	Lord Windsor.	Parliamentary Secretaries:	
First Junior Lord of the Treasury	Henry T. Anstruther.	To the Board of Trade	Bonar Law.
Second Jr. Lord of the Treasury	Ailwyn Fellows.	To the Local Government Board	Grant Lawson.
		To the Board of Education	William Anson.

The Nation.—The United Kingdom of Great Britain and Ireland, the nucleus around which the British Empire has been built, was perfected in 1603, when the crowns of Ireland and Scotland were united. The executive power of the empire vests in the sovereign, through his ministers. The real power of the empire, however, is to be found in Parliament, a body which not only has complete legislative power, but which exercises, through the Lower House, much authority in executive matters. Parliament consists of an Upper House of Lords and a Lower House of Commons. It lasts seven years or until dissolved by the sovereign, and it usually meets annually for a term of about six months. The members of the House of Lords are peers, who hold either by hereditary right or by crown appointment to the peerage. In 1902 there were 590 peers. The House of Commons consists of members elected from counties, boroughs and universities —670 in all in 1902.

The established Church of England is the Protestant Episcopal Church, of which the King is the supreme head; but all religions are tolerated and are equal at law. Public instruction is not compulsory, but the National Board of Education maintains control of the school boards and requires that accommodations be provided for all children between the ages of five and fourteen years. Secondary education is not controlled by the government, but the university system is, perhaps, more perfectly developed in England than in any other country. England, Ireland, Scotland and Wales each has its graded systems of courts of justice.

For purposes of defense the kingdom is divided into twelve military districts—eight in England and Wales, one in Scotland and three in Ireland. These are subdivided into sixty-seven regimental recruiting districts.

The budget of 1901-2 shows that the actual revenues of the kingdom amounted to $714,989,995, while the expenditures were $977,611,075. The public debt is about $3,750,000,000. Great Britain's trade is enormous. In 1901 the exports amounted to $1,869,396,850, the imports to $2,770,587,520.

About 17½ per cent of the area of the United Kingdom is still uncultivated; about 48 per cent is under crops and grasses; 30 per cent is grazing land, and over 4 per cent is in woods.

King of England.

The Parliament.—The present form of Parliament, divided into two Houses, the Lords and the Commons, dates from the middle of the fourteenth century. The members of the House of Commons are elected by popular vote, about one-sixth of the population being electors, and the election must be by secret vote by ballot. The House of Lords is composed of peers, who hold their seats by hereditary right, by creation of the sovereign, by virtue of office (the bishops), by election for life (the Irish peers), and by election for the term of Parliament (the Scottish peers).

No one under twenty-one years of age can be a member of Parliament. All clergymen of the Church of England, ministers of the Church of Scotland and Roman Catholic clergymen, and all government contractors and sheriffs or returning officers are disqualified. No English or Scottish peer can be elected to the House of Commons; but non-representative Irish peers are eligible for membership.

The Speaker of the House of Lords is the Lord High Chancellor of England, Right Hon. the Earl of Halsbury, while the Earl of Morley, the Earl of Cork and Orrery and Earl de Montalt are Deputy Speakers. The princes of the royal blood are: George Frederick, Prince of Wales; Arthur William Patrick Albert, Duke of Connaught; Leopold Charles Edward George, Duke of Albany, and George William Frederick Charles, Duke of Cambridge. Randall Davidson, D. D., is Archbishop of Canterbury, and William D. Maclagan, D. D., Archbishop of York. The following is a list of the Dukes of England:

Created.	Family Name.	Heir Appar. or Presumptive.
1892 Argyll	J. D. S. Campbell, K. T. (Sc. D., Argyll), b. '45, s. 1900 m	Ld. Archd. Campbell, b. '46.
1682 Beaufort	Henry A. W. Fitz Roy Somerset, b. 1847, s. 1899, m	Marq. of Worcester, b. 1900.
1694 Bedford	Herbrand Arthur Russell, b. 1858, s. 1893, m	Marq. of Tavistock, b. 1888.
1712 Brandon	Alfred Douglas Douglas-Hamilton (Scot Duke, Hamilton), b. 1862, s. 1895	Percy Seymour Douglas-Hamilton, b. 1875.
1799 Cumberland and Teviotdale	Ernest Augustus W. A. G. F., K. G. (Ir. Earl, Armagh), b. 1845, s. 1878, m	Earl of Armagh, b. 1880.
1694 Devonshire	Spencer Compton Cavendish, K. G., b. 1833, s. 1891, m	Victor Cavendish, M.P., b. '68.
1889 Fife	Alexander William George Duff, K. T. (Irish Earl, Fife), b. 1849, 1st Duke m	Lady Alexandra Duff, b. '01.
1675 Grafton	Aug. Charles Lennox Fitz Roy, K. G., b. 1821, s. 1882, w	Earl of Euston, b. 1848.
1694 Leeds	G. G. Osborne (S. Vis., Dunblane), b. 1862, s. 1895, m	Marq. of Carmarthen, b. '01.
1719 Manchester	Wm. Angus Drogo Montague, b. 1877, s. 1892, m	Viscount Mandeville, b. '02.
1702 Marlborough	Charles R. John Spencer-Churchill, b. 1871, s. 1892, m	Marq. of Blandford, b. 1897.
1756 Newcastle (u. Lyme)	Henry P. A. Pelham-Clinton, b. 1864, s. 1879, m	Lord Francis Hope, b. 1866.
1483 Norfolk	Henry Fitz-Howard, K. G., Earl Marshal, b. 1847, s. 1860, w	Lord Edmund Talbot, b. '55.
1766 Northumberland	Henry George Percy, K. G., b. 1846, s. 1899, m	Earl Percy, M. P., b. 1871.

DUKES OF ENGLAND—Continued.

Created.	Family Name.	Heir Appar. or Presumptive.
1716 Portland	W. J. Cavendish-Bentinck, K. G., G. C. V. O., b. 1857, s. 1879, m	Marq. Titchfield, b. 1893.
1675 Richmond and Gordon	Charles H. Gordon-Lennox (Scot. Duke, Lennox), b. 1845, s. 1903, w	Earl of March, b. 1870.
1703 Rutland	John Jas. Robt. Manners, K. G., b. 1818, s. 1888, w	M. of Granby (a Peer), b. '52.
1684 St. Albans	C. V. A. A. de Vere Beauclerk, b. 1870, s. 1898	Lord O. Beauclerk, b. 1874.
1547 Somerset	Algernon St. Maur, b. 1846, s. 1894, m	Lord Percy St. Maur, b. '47.
1833 Sutherland	Cromartie Sutherland-Leveson-Gower (Scot. Earl, Sutherland), b. 1851, s. 1892, m	Marq. of Stafford, b. 1888.
1814 Wellington	Arthur Charles Wellesley (Irish Earl, Mornington), b. 1849, s. 1900, m	Marq. of Douro, b. 1876.
1874 Westminster	Hugh Richard Arthur Grosvenor, b. 1879, s. 1899, m	Ld. A. H. Grosvenor, b. '60.

The Speaker of the House of Commons is the Right Hon. William Court Gully, K. C., member for the city of Carlisle, while the Right Hon. James William Lowther, member for Penrith, is Deputy Speaker and Chairman of Committees.

The Colonial Possessions.—The British possessions are world-wide. It has tritely been said that the sun never sets upon them. They exist on every continent and in all climates and latitudes. The British colonies are of three types: 1. The Crown colonies, entirely controlled by the Home Government. 2. Those having "representative" institutions, in which the Crown retains only a right to veto legislation, although the Home Government retains the control of the public offices. 3. Those having "responsible" government, in which the Crown has only the veto and the Home Government can appoint the Governor, but has no control over any public officer.

Gibraltar and Malta are the European possessions. The Rock of Gibraltar, which is a Crown colony, is a naval base and military foothold of great strategic importance, while Malta, an island in the Mediterranean, about sixty miles from Sicily, is one of the most important ports of call in the world.

In a group of four are Aden, Perim, Sokotra and the Kuria Muria Islands. Aden is a peninsula about one hundred miles east of Bab-el-Mandeb, on the coast of Arabia. Perim, at the entrance to the Red Sea, is a small settlement of some consequence. Aden, being an important coaling station on the eastern route, is strongly fortified. The Bahrein Islands, the largest of which is Bahrein, lie in the Persian Gulf some twenty miles off the Arabian coast. The donkeys and reed mats of Bahrein are famous the world over, and these, with the pearl fishing, constitute the chief industries of the people.

Labuan and British North Borneo, the northern part of the Island of Borneo, are leased to the British North Borneo Company, and are under its direction, subject to the approval of the Foreign Secretary of State. Ceylon is a more important colony, and the Maldine Islands, about five hundred miles west, pay yearly tribute to Ceylon.

Cyprus, the third largest of the Mediterranean islands, is an agricultural country, while Hong Kong, an island off the southeast coast of China, at the mouth of the Canton River, and Wei-Hai-Wei, in the Chinese Province of Shantung, are the British footholds in the land of the Celestial.

The Indian Empire is by far Great Britain's most valuable Asiatic possession. Prior to 1858 British India proper was under the jurisdiction of the British East India Company, but it is now governed in the name of the King, styled Emperor of India, and in England through the Secretary of State for India, assisted by a council of ten members appointed by the Secretary. The executive authority in India vests in the Governor-General in Council. Since 1858 the Governor-General has been Viceroy, as appointed by the Crown. Administratively India is divided into eight great provinces, each with an English head. Justice is administered in courts of a mixed English and native character, and the chief religion is that of the Hindoos (over 75 per cent), and the Mohammedans (over 22 per cent). Dependent upon India are the two border States of Baluchistan, in South Central Asia, and Sikkim, in the Himalayas, south of Thibet. Feudatory also are the Andaman and Nicobar islands in the Bay of Bengal, and the Laccadive Islands, off the west coast of Malabar.

The Straits Settlements, comprising Singapore, Penang, Malacca, Christmas and the Cocos islands, situated in the Malay Archipelago, form a Crown colony, while the Federated Malay States of Perak, Negri, Pehang, Sembitan and Selangor are under British protection.

British African possessions may be found in all parts of the continent. British East Africa includes the East African Protectorate (from the Umba to the Juba River and inland to the borders of Uganda), the Uganda Protectorate, on the mainland; the Zanzibar Protectorate, on the island of Zanzibar; Pemba and others of smaller area.

The West African possessions, all of which are Crown colonies, include the Gold Coast (along the Gulf of Guinea, between German Togoland and the French Ivory Coast), Lagos (the island of Lagos and 140 miles of coast between Dahomey and Southern Nigeria), Gambia (at the mouth of the Gambia River), and Sierra Leone (between French Guinea and the Republic of Liberia).

The South African colonies are those of Cape Colony and Natal (including the Province of Zululand), and both are of no incousiderable commercial importance. The Central African colonies are also of great importance. They include the Orange River Colony, formerly the Orange Free State; the Transvaal Colony, formerly the Transvaal Republic; Rhodesia, which is governed by the British South African Company; the little colony of Basutoland, and the Central African Protectorate (on the southern and western shores of Lake Nyassa).

Other British colonies in Africa are the Somaliland Protectorate (running west of Zeyla from Lahadu to Bandar Ziyada); Nigeria (comprising Lagos, Northern Nigeria and Southern Nigeria); the Bechuanaland Protectorate (between the Molopo River and the Zambesi, and between the Transvaal Colony and Matabeleland on the east and German Southwest Africa on the west), and the island colonies. These latter include Ascension Island, 700 miles northwest of St. Helena; St. Helena, 1,200 miles west of the west coast (including administratively the Tristan da Cunha group, midway to South America); Mauritius, in the Indian Ocean, 500 miles east of Madagascar, and the Seychelles and dependent groups adjacent.

Bermuda consists of a group of 360 small islands east of the North Carolina coast, about 580 miles. The climate is delightful and salubrious, and they are principally known as Summer resorts.

In the South Atlantic, about 300 miles east of Magellan Straits, are the Falkland Islands. British Guiana is especially valuable for its gold and diamond mines, and British Honduras, a Crown colony in the Caribbean Sea, 660 miles west from Jamaica, is principally noted for its hardwoods and mahogany.

The islands in the British West Indies include the Bahamas, Barbados, Jamaica (the largest and most important), Trinidad, and the Leeward and Windward groups. Jamaica is the military, political and commercial centre of the entire group.

The chief British possessions in Australasia are the Australian colonies, the six States of which form the Australian Commonwealth. The executive power, vested in the British King, is exercised by his Governor-General. The legislative power vests in him and the Federal Parliament, of a Senate and House of Representatives. New South Wales is the most important of the States and sends twenty-six Representatives to the House; Victoria comes next with twenty-three; then Queensland with nine; South Australia with seven, and West Australia and Tasmania each with five. Religious toleration is universal in the States, and there is no State religion or State aid of religion in any, except in Tasmania, where financial support is given impartially to all. The judicial system, which is similar throughout, is closely patterned after that of the usual State systems in this country. Sydney, which is the headquarters of the British Australian fleet, is a first-class port and the centre of defense.

The southeastern part of the island of New Guinea is a British possession. It is at present a dependency of the Commonwealth, although its final relation to it has not yet been established.

In New Zealand, next to Australia the most important of the Australian colonies, the Government is represented by a Governor, the executive head for the Crown, who, with the General Assembly of two Chambers, form the legislative power. There is no State church; there is a system of free public primary education.

THE BRITISH POSSESSIONS AND THEIR GOVERNMENTS.

Place.	Character of Possession.	Form of Gov't.	Executive Power.			Legislative Power.

Meaning of abbreviations: Res., responsible. Rep., representative. *Appointed. †Elected. ‡Both elected and appointed. §Nominated by local officials. ‖British province and feudatory state under British protection.

Colonial Representatives.—The British representatives in the colonies and protectorates are:

India.—Lord Curzon of Kedleston, Viceroy and Governor-General; Madras, Lord Ampthill; Bombay, Lord Northcote; Bengal, Sir John Woodburn; Northwest Province, Sir Anthony P. MacDonald; Punjab, Sir W. M. Young; Burmah, Sir F. W. R. Fryer; Ceylon, Colonel Rt. Hon. Sir J. W. Ridgeway; Straits Settlements, Sir Frank A. Swettenham; Hong Kong, Sir Henry Arthur Blake; Borneo, E. W. Birch; Sarawak, H. H. Sir Charles Johnson Brooke, Raja.

Dominion of Canada.—Earl of Minto, Governor-General; Newfoundland, Sir Cavendish Boyle.

Africa.—South Africa, Lord Milner, High Commissioner; Cape Colony, Hon. Sir W. F. Hely-Hutchinson; Basutoland, Sir Godfrey Yeatman Lagden; Bechuanaland, vacant; Transvaal, Captain Hon. Sir Arthur Lawley; Orange River, Major H. J. Goold-Adams; Natal, Colonel Sir H. E. McCallum; Rhodesia, Sir Michael J. Clarke; Gambia, Sir George C. Denton; Gold Coast, Major Matthew Nathan; Sierra Leone, Sir Charles A. King-Harman; Lagos, Sir William McGregor; Southern Nigeria, Sir R. D. R. Moore; Northern Nigeria, Brigadier-General Sir F. D. Lugard; Somaliland, Lieutenant-Colonel E. E. Swaine; East Africa Protectorate, Sir C. N. E. Eliot; Uganda, Lieutenant-Colonel J. H. Sadler; Witu, A. S. Rogers; Zanzibar, Sir C. N. E. Eliot; British Central Africa, Alfred Sharpe.

Commonwealth of Australia.—Lord Tennyson; New South Wales, Earl Beauchamp; Victoria, Colonel Sir George Sydenham Clarke; South Australia, vacant; Queensland, Major-General Sir H. Chermside; Tasmania, Sir Arthur E. Havelock; Western Australia, vacant; New Zealand, Earl Ranfurly.

British West Indies.—Jamaica, Sir A. W. L. Hemming; Bahama, Sir Gilbert T. Carter; Leeward Isles, Sir Gerald B. B. Strickland; Windward Isles, Sir Robert B. Llewelyn; Barbados, Sir Frederick M. Hodgson; Trinidad and Tobago, Sir Cornelius A. Moloney.

Miscellaneous Islands and Protectorates.—Bermuda, Lieutenant-General Sir Henry Le Guay Geary; Gibraltar, General Sir G. S. White; Malta, General Sir F. Wallace Grenfell; St. Helena, vacant: Cyprus, Sir W. F. Haynes Smith; Fiji and Pacific islands, Sir Henry M. Jackson; British Guiana, Sir J. A. Swettenham; British New Guinea, George Ruthven Le Hunte; British Honduras, Colonel Sir David Wilson; Mauritius, Sir Charles Bruce; Seychelles, E. B. Sweet-Escott; Ascension, Captain G. N. A. Pollard; Falkland, William Grey-Wilson.

Events in 1903.—The evident and continued opposition to Colonial Secretary Joseph Chamberlain, shown at the beginning of the war in South Africa, and continued since, especially in relation to his financial policy, culminated on September 17 with the resignation of Secretary Chamberlain, the Right Hon. C. T. Ritchie, M. P., Chancellor of Exchequer, and the Right Hon. Lord George Hamilton, M. P., Secretary of State for India. The crisis had been expected, but hardly anticipated, for only a few days before the resignations there had been reported rumors to the effect that the Colonial Secretary had given up the idea of leaving the Cabinet. Threats to resign had been heard during the year, and in June a crisis was averted only by a timely speech of Premier Balfour, who appealed for an open mind on Chamberlain's policy. Mr. Chamberlain, it was said, would continue to advocate the policies which had caused the disruption, and it was hinted that he had the Premiership in view. The Balfour Ministry was allowed to stand, the vacancies to be filled until the election in 1904. On April 7 William Hayes Fisher, M. P., Financial Secretary of the Treasury, resigned his post on account of his connection as director with a financial syndicate. The vacancy was filled by the Hon. Arthur Ralph Douglas Eliot, M. P.

At the opening of Parliament, in February, the King's speech expressed satisfaction over the Venezuelan settlement and the Alaskan boundary treaty, showed anxiety over the Balkan situation, reported satisfactory progress in South Africa and promised an Irish Land bill and other important measures. The Irish Land bill was introduced in the House of Commons on March 25. It provided for the possible

*1902. †1901-02. ‡1901.

purchase of lands by tenantry, and 12,000,000 pounds was provided for the purpose of offering loans at 3½ per cent. On August 14 the bill was finally passed by the House of Lords, in agreement with the House of Commons. The budget deficit for the year was estimated at $7,500,000. The corn duty was repealed on June 22, on a resolution of the Chancellor of the Exchequer. The army estimate for 1903-1904 showed an increase of more than $500,000, in spite of the disappearance of the war demands of the year before. The navy estimate amounted to $179,184,205, which takes into consideration the construction of several new battleships. There were 71 new sea fighters being built for England in March. The Argentine war ships building in England, and rejected by that country on account of an agreement with Chili, were refused by the British Government as being unsuitable for her navy.

The "Mad Mullah" (Hadji Mohammed Abdullah) continued active in Somaliland during the year, and for some time effectively resisted British attempts to subdue him. On April 23 news was brought of a crushing defeat of a British force on the 17th, the first seriously fatal reverse met during the campaign of the year. A few days later the "Mad Mullah" was beaten off, with a loss of 2,000 men. Abyssinian troops co-operated with the British in part of the war. In May the Sultan of Sokoto, in Nigeria, revolted against the British, but was soon defeated and deposed. On August 21 he was killed.

In April King Edward paid a visit to Italy and was received by Pope Leo XIII. On his return he visited France, where he was met with great enthusiasm. A return visit was made by President Loubet of France in July.

On January 23 Colonel Lynch, member of Parliament, was convicted of high treason, in having supported the enemies of England during the Boer War, and was sentenced to death. The sentence was commuted at once.

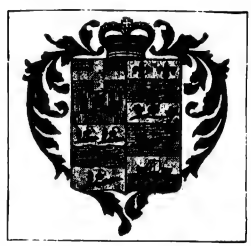
A new excise law went into effect in London on January 1. Habitual drunkards are prevented from obtaining liquor, three convictions for drunkenness being considered proof of the habit. Edward R. Henry was appointed Police Commissioner of London on March 4, vice Colonel Sir Edward Bradford, retired. On April 25 a statue in memory of the marines killed in South Africa and China was unveiled in St. James Park. During the naval manoeuvres near Corfu, Greece, in January, the torpedo boat destroyer Orwell was cut in two by the cruiser Pioneer, and thirteen of the crew were killed. Slight earthquake shocks were felt in Devonshire March 24. On September 10 a fierce gale swept the English coast, causing considerable damage to property and shipping. A number of lives were lost in wrecks. England will be represented at the St. Louis fair by a large exhibit, which will include the Jubilee gifts to the late Queen Victoria.

On June 22 the British Government abolished the political constitution of Malta, instituted in 1887, and established a new one, taking control of expenditures out of the hands of the council. On August 11 a severe hurricane swept over Jamaica and the other West Indian Islands. The banana industry was almost entirely wiped out, the city of Kingston was badly damaged, and several thousand persons rendered homeless. The money loss was put at more than $3,000,000. Even worse havoc was wrought on the adjacent Cayman Islands. On March 2 the discovery of gold in Arltunga, Australia, was announced. Syndicates were formed and prospectors rushed to the field. A destructive storm visited North Queensland March 10 and caused the loss of many lives. In July the intent of Great Britain to govern the Transvaal as a crown colony in the purest sense of the word was made evident, the officials to be appointed from England and backed by a large military garrison. The sentences of the former burghers convicted of military offenses during the late war in South Africa were remitted by the Lieutenant-Governor on June 4. On March 8 a series of earthquake shocks were felt on the Island of Dominica, B. W. I. Rioting took place at Port of Spain, Trinidad, in March, due to an increase in the price of water, following the construction of new water works. Government buildings were burned and the Governor was forced to take refuge on a cruiser lying in the harbor.

On January 1, at Delhi, Edward VII. of England was proclaimed Emperor of India amid scenes of unprecedented Oriental magnificence. The ceremony was attended by 15,000 persons. Homage was rendered Viceroy Curzon as representative of the King and Emperor. The celebration continued ten days. Many Americans were present.

CANADA.

—



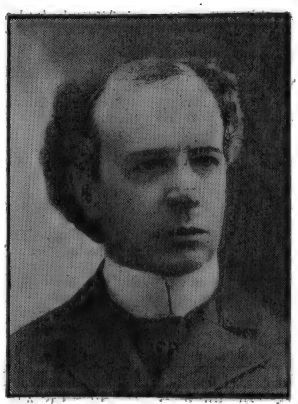
Capital:
OTTAWA.

The Dominion of Canada originally consisted of the two provinces of Canada—Upper and Lower—Nova Scotia and New Brunswick, but the "British North American Act," which was passed in 1867, not only provided for the consolidation of these provinces, but made provision for the admission of British Columbia, Prince Edward Island, the Northwest Territories and Newfoundland, a privilege of which Newfoundland alone has not availed herself.

In accordance with this act of consolidation the Constitution of the Dominion is "similar in principle to that of the United Kingdom," and, while the executive authority is vested in the British sovereign, the legislative power of the Dominion is exercised by a Parliament of two Houses—the Senate and the House of Commons. Each province forming the Dominion has a separate Parliament and administration, a Lieutenant-Governor being at the head of all provincial bodies.

The Senate of the Dominion is composed of eighty-one members, who have been nominated for life. Each must be at least thirty years of age, a born or naturalized subject and possessed of $4.000 worth of property in the province from which he was appointed. The 213 members of the House are elected by the vote of their constituencies, the electors of which are qualified by the act of each provincial assembly.

The Speaker of the Senate and House each receives a salary of $4,000, while each member of the two houses is granted a session allowance of $1,500, with 10 cents per mile for travelling expenses. In cases of absence, except for sickness, the sum of $8 per diem is deducted. The Governor-General, who receives a salary of $50,000 per annum, is appointed by the Federal Government for a term of five years, and he is assisted in his functions by a council composed of fourteen heads of departments, each of whom receives a salary of $7,000 per annum, except the Premier, who has a salary of $8,000 per annum.



The representation from the several provinces is as follows: Ontario, 24 Senators, 92 Commons; Quebec, 24 Senators, 65 Commons; Nova Scotia, 10 Senators, 20 Commons; New Brunswick, 10 Senators, 14 Commons; Manitoba, 4 Senators, 7 Commons; British Columbia, 3 Senators, 6 Commons; Prince Edward Island, 4 Senators, 5 Commons; Northwest Territories, 2 Senators, 4 Commons.

Dominion Government.—The present Executive of the Dominion is composed as follows:

Governor-General, Earl of Minto. Staff—Secretary to the Governor-General, Major F. S. Maude; Aides-de-Camp, Captain A. C. Bell and Captain F. St. J. Hughes. Comptroller of the Household, Arthur Guise, Esq. The Cabinet and the Executive Committee of the Privy Council—President of the Privy Council and Prime Minister, Rt. Hon. Sir Wilfrid Laurier; Minister of Trade and Commerce, Hon. Sir Richard J. Cartwright; Secretary of State, Hon. Richard William Scott; Minister of Justice, Hon. Charles Fitzpatrick; Minister of Marine and Fisheries, Hon. Raymond Prefontaine; Minister of Militia and Defense, Hon. Sir Frederick William Borden; Postmaster-General, Hon. Sir William Mulock; Minister of Agriculture, Hon. Sydney Arthur Fisher; Minister of Public Works, Hon. James Sutherland; Minister of Finance, Hon. William S. Fielding; Minister of Railways and Canals, Hon. Andrew George Blair; Minister of the Interior, Hon. Clifford Sifton; Minister of Customs, Hon. William Paterson; Minister of Inland Revenue, Hon. M. E. Bernier; Minister without portfolio, Hon. W. Templeman; Solicitor-General (not in the Cabinet), Hon. H. G. Carroll. In the Cabinet, but not in the Council: Clerk of the King's Privy Purse, John Joseph McGee, Esq. Other prominent officials: Speaker of the Senate, Hon. Lawrence G. Powers; General Li-

orarian of Parliament, Alfred D. De Celles; Deputy Minister of Inland Revenue, W. J. Gerald; Deputy Minister of Finance, J. M. Courtney; Deputy Minister of Militia and Defense, Colonel L. F. Pinault; General Officer Commanding the Militia, Major-General the Earl of Dundonald; Adjutant-General, Colonel Rt. Hon. Lord Aylmer; Quartermaster-General, Colonel W. H. Cotton; Deputy Minister of Trade and Commerce, W. G. Parmelee; Deputy Minister of Marine and Fisheries, Lieutenant-Colonel F. Gourdeau; Deputy Minister of the Interior, James A. Smart; Commissioner of Dominion Lands, J. G. Turriff; Chief Inspector of Surveys, William Pearce; Superintendent of Mines, Dr. Eugene Haanel; Auditor-General, John Lorn Macdougall; Deputy Minister of Agriculture, George F. O'Halloran; Deputy Minister of Railways, C. Schreiber; King's Printer, S. E. Dawson; Deputy Minister of Public Works, A. Gobeil; Deputy Minister of Justice, E. L. Newcombe; Register of Supreme Court, E. R. Cameron; Deputy Postmaster-General, R. M. Coulter; Commissioner of Customs, John McDougald; Commissioner of Police, Northwest Territories, A. B. Perry; Superintendents of Police, Yukon Territory, Z. T. Wood, A. E. Snyder, A. E. R. Cuthbert.

Sir Wilfrid Laurier.

The Provinces.—The seven provinces which are now comprised within the Dominion have a total area of nearly 4,000,000 square miles, including both land and water, and is thus the largest of all the colonies of the British Empire.

Executive for Quebec—Minister of Lands, Mines and Fisheries, Hon. S. N. Parent, Premier; Attorney-General, H. Archambeault; Minister of Agriculture, Hon. A. Turgeon; Secretary and Registrar, Hon. A. Robitaille; Provincial Treasurer, Hon. H. T. Duffy; without portfolio, Hon. J. J. Guerin; Minister of Colonization and Public Works, Hon. H. Gouin; Clerk, G. Grenier.

Executive for Ontario.—Treasurer, Hon. G. W. Ross, Premier; Attorney-General, Hon. J. M. Gibson; Minister of Education, Hon. Richard Harcourt; Commissioner of Public Works, Hon. F. R. Latchford; Secretary, Hon. J. R. Stratton; Commissioner of Crown Lands, Hon. E. J. Davis; Minister of Agriculture and Registrar, Hon. John Dryden; Clerk, John R. Cartwright.

Executive for Manitoba.—Minister of Agriculture and Immigration, Hon. R. P. Roblin, Premier; Treasurer and Land Commissioner, Hon. J. A. Davidson; Secretary, Hon. D. H. McFadden; Attorney-General and Minister of Education, Hon. Colin H. Campbell; Minister of Public Works, Hon. Hobert Rogers; Clerk, C. Graburn.

Executive for British Columbia—President, Hon. Richard McBride, Premier; Secretary and Minister of Education, A. E. McPhillips; Attorney-General, Charles Wilson; Minister of Finance and Agriculture, R. G. Tatlow; Commissioner of Lands and Works, W. C. Wells; Minister of Mines, R. F. Green.

Executive for Northwest Territories—Attorney-General, Commissioner of Education and Territorial Treasurer, F. W. G. Haultain; Treasurer and Commissioner of Public Works, G. V. Bulyea; Secretary and Commissioner of Agriculture, W. Elliott; Clerk of Council, J. A. Reid.

Provincial Government.—By the provisions of the Consolidation Act each province has full power to regulate its own local affairs and dispose of its own revenue, provided it does not interfere with the policy of the central government. The Lieutenant-Governor of each province is appointed by the Governor-General, while the other officials are elected by the people. The present executive is composed as follows:

Executive for Prince Edward Island—Attorney-General, Hon. Arthur Peters, Premier; Secretary, Treasurer and Commissioner of Agriculture, Hon. Benjamin Rogers; Commissioner of Public Works, Hon. James H. Cummisky; Members of Council, Hon. James W. Richards, Hon. Peter McNutt, Hon. R. C. McLeod, Hon. George Forbes; Clerk, Arthur Newbery.

Executive for Nova Scotia—Provincial Secretary, Hon. G. H. Murray, Premier; Attorney-General, Hon. J. W. Longley; Commissioner of Public Works and Mines, Hon. Arthur Drysdale; Members of Council, Hon. Thomas Johnson, Hon. A. H. Comeau, Hon. T. R. Black, Hon. David McPherson, Hon. W. T. Pipes.

Executive for New Brunswick—Provincial Secretary, Hon. Lemuel J. Tweedie, Premier; Surveyor-General, Hon. A. T. Dunn; Attorney-General, Hon. William Pugsley; Commissioner of Agriculture, Hon. Lauchlan P. Farris; Chief Commissioner of Public Works, C. H. La Billois; Members of Council, Hon. H. A. McKeown, Hon. George F. Hill; Clerk, J. H. Dickson.

Population.—As no vital statistics are collected for the Dominion, it is impossible to estimate the rate of natural increase in population. The 1901 census gave the following population for the larger cities and towns: Montreal, 267,730; Toronto, 208,040; Quebec, 68,840; Ottawa, 59,928; Hamilton, 52,634; Winnipeg, 42,340; Halifax, 40,832; St. John, 40,711; London, 37,981; Vancouver, 26,133; Victoria, 20,816; Kingston, 17,961.

Religion.—There is no established church in the Dominion. The Roman Catholic Church is governed by one cardinal, seven archbishops, twenty-three bishops and about 1,600 clergy; the Episcopal Church by two archbishops, nineteen bishops and nearly 1,500 clergy, while the Presbyterian Church has about 1,400 ministers, the Methodist Church 1,900, and the Baptist Church about 500. The census of 1901 gives the number of followers of each creed: Roman Catholic, 2,229,600; Presbyterian, 842,442; Episcopal, 680,620; Methodist, 916,886; Baptists, 316,477; Lutherans, 92,524; Congregationalists, 28,293; other creeds, 206,821, and no creed, 58,652.

Education.—There are one or more universities in each province, and several colleges that prepare for university degrees. The total annual expenditure of these institutions is more than $700,000, and they are attended by nearly 16,000 students. The

public school system is also upon a good basis. In 1901 there were 18,963 schools, which were attended by 1,100,000 pupils, and the annual expenditure for their support exceeded $10,000,000.

Crime and the Courts.—Each province in the Dominion has its Superior and County courts, and there is a Supreme Court in Ottawa, composed of a Chief Justice and five Judges, which has jurisdiction throughout Canada.

According to the criminal statistics recently prepared by the Dominion statistician the number of charges in 1901 for indictable offenses was 128 less than in 1900, being 8,291 in 1901, as against 8,419 in 1900. The statistical position of 1900 as compared to 1899, however, was 249 more charges. The percentage of convictions in 1901 was 68 per cent. as against 68.51 per cent in 1900. The convictions by provinces were as follows:

Province.	1900.	1901.
Ontario	2,769	2,769
Quebec	1,487	1,490
British Columbia	480	457
Nova Scotia	325	329
Manitoba	269	202
Territories	170	207
New Brunswick	137	127
Yukon	95	40
Prince Edward Island	27	17
Canada	5,768	5,638

For the last seven years the committals to the penitentiaries have not varied greatly in number. For 1901 they were 492, the offenses being as follows: Murder and attempt, 4; manslaughter, 7; social offenses, 37; bigamy, 3; shooting at or wounding with intent, 28; assault, 18; burglary and robbery with violence, 137; horse, cattle and sheep stealing, 17; other offenses against property, 196; forgery and offenses against the currency, 19; arson, 10; other felonies and misdemeanors, 16; total, 492.

The following is the total number of convictions of all kinds in Canada for the year ending September 30, 1901: Offenses against the person, 4,677; offenses against property with violence, 450; offenses against property without violence, 4,216; malicious offenses against property, 192; forgery and offenses against the currency, 91; other offenses not included in the above classes (including drunkenness, vagrancy, petty larceny, etc.), 32,025; total, 41,651.

Products and Industries.—The Dominion is rich in mineral resources, and vast areas of the mining properties are still unimproved. The total value of the mineral products in 1901 was $69,407,031. The principal product is gold, the amount mined in 1901 being valued at nearly $25,000,000, and among the other minerals were: Coal, $14,671,122; nickel, $4,594,523; asbestos, $1,186,434; copper, $6,600,000; silver, $2,993,660; lead, $2,199,784; pig iron, $1,212,113; iron ore, $762,284; petroleum, $953,415.

The timber wealth of Canada is also great, and the production of lumber is one of its greatest industries. The wood pulp industry is also of great value, the exportable surplus in 1901 being nearly $2,000,000. The forest products in 1901 amounted in value to $32,972,545.

Special attention is now being given to agriculture in Canada, and the efforts of the Board of Agriculture to educate the people in the most modern methods of farming and dairying have met with remarkable success. The fisheries of Canada are also a great source of income.

Militia.—Since the passage of the Consolidation Act the Dominion militia has been under the command of a major-general of the British army. For military purposes the Dominion is divided into twelve districts, with district officers and a brigadier staff in each. The permanent militia number 1,021, the active militia 38,090, while the reserve militia consists of all adult males between the ages of eighteen and sixty years who are not serving in the active militia. In addition there are two royal schools of artillery, one school of cavalry, one of mounted rifles and five of infantry. There is also a well-established military college at Kingston.

At the present time Canada possesses no marine militia, but efforts are now being made to include the Dominion among the recruiting stations for the imperial navy.

Railways and Canals.—Canada's system of canal, river and lake navigation is more than 2,700 miles in length, and through it vessels pass from lake ports to the Atlantic without breaking bulk. In 1901 more than $81,500,000 had been spent on canal construction alone.

The total length of the railroads in the Dominion is more than 18,000 miles, the line of the Canadian Pacific alone being 2,906, from Montreal to Vancouver. There are also forty-three electric railways in Canada, with a mileage of 688.

Financial and Commercial.—If it were not for the public debt, which in 1901 amounted to $354,732,433, the interest on which forms the largest item in the list of annual expenditures, Canada's revenue would greatly exceed her disbursements. As this debt was chiefly incurred on account of public works and improvements, however, its magnitude does not appall. The following table will give some idea of the financial condition and growth of the Dominion:

FINANCIAL CONDITION OF THE DOMINION, 1881-1902.

Year.	Consolidated Fund Receipts.	Consolidated Fund Expenditure.	Exp'd'r Per Capita.	Sinking Fund.	Total Receipts.	Total Expenditures.	Total Exports.	Total Imports.
1881....	$29,635,298	$25,502,555	$5.88	$1,217,153	$29,635,298	$33,796,643	$98,290,823	$105,330,840
1882....	33,383,456	27,067,104	6.18	1,226,206	35,182,549	34,674,625	102,137,203	119,419,500
1883....	35,794,695	28,730,157	6.48	1,290,153	36,803,669	42,898,886	98,085,804	132,254,022

Newfoundland and Labrador.—In Newfoundland the Government is administered by a Governor, who is appointed by the Crown at a salary of $10,000, and he is assisted by an Executive Council of nine members, a Legislative Council of fifteen members and a House of Assembly composed of thirty-six representatives.

The present Governor, Sir Cavendish Boyle, was appointed in 1901. His Executive Council is composed as follows: Premier and Colonial Secretary, Hon. Robert Bond; Minister of Justice, vacant; Minister of Finance, Hon. E. M. Jackman; Ministers without portfolios, Hon. E. P. Morris, Hon. A. W. Harvey, Hon. J. S. Pitts, Hon. H. J. B. Woods, Hon. J. D. Ryan and Hon. G. Knowling.

The population of Newfoundland is estimated as somewhat in excess of 200,000, of whom 75,900 are Roman Catholics, 73,000 Anglicans and 61,000 Methodists. These inhabitants have largely located along the coast of the island, the interior of which is still practically in a state of nature, although the construction of nearly 640 miles of railroad has tended to attract settlers to the rich tracts of agricultural, mineral and timber lands which had hitherto been almost unapproachable.

Mining and fishing are the chief industries of the island, the exports of the colony being chiefly codfish, cod and seal oil, sealskins, lobsters, herring, etc. The mineral exports in 1901 amounted to nearly $900,000.

Labrador, a dependency of Newfoundland, forms the most easterly part of America. It possesses a

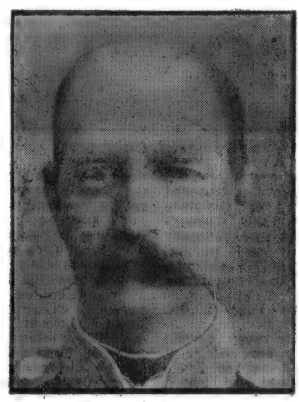
few missionary settlements and a few posts established by the Hudson Bay Company. Its fisheries are its only industries.

Events in 1903.—The discovery of oil and coal was reported in March from Southeast Kootenay, Canada. The land on which they were discovered is held in reserve by the Government, and no licenses to mine were issued. On February 28 the entire business section of Halifax, N. S., was threatened by fire, and only by the combined efforts of the fire department and detachments of the Royal Engineers was it subdued, with $300,000 damage. The Canadian Government and the Canadian Pacific Railway entered into an agreement early in the year to act in concert toward the development of Western Canada. The expense is to be borne jointly by the State and the railway, and it was planned to move not less than 200,000 settlers during the next few years. The United States Consul at Ontario made an investigation of the forests of Canada during the early part of the year, and reported immense tracts of timber absolutely untouched by man. From the east coast of Labrador west to Alaska, north of the fiftieth parallel of latitude, there is an area 3,000 miles long by 500 miles wide, offering a fuel reserve that will last for a century.

On April 29 the town of Frank, Northwest Territory, was nearly destroyed by a rockslide. Almost one-half of Thunder Mountain, at the base of which the town was situated, split off and buried the valley in millions of tons of debris. Comparatively few lives were lost.

Greece.

Capital:
ATHENS.



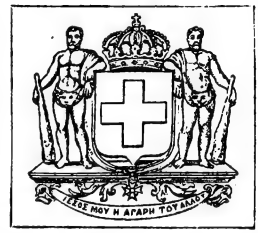
Greece was a province of the Turkish Empire from the beginning of the sixteenth century until it gained its independence by the insurrection of 1821-29. By the protocol of London, February 3, 1830, it was declared a kingdom, under the protection of France, Great Britain and Russia, and the crown was tendered to Prince Leopold of Saxe-Coburg. He declined the honor, however, and later it was accepted by Prince Otto of Bavaria, who ascended the throne on January 25, 1833, and reigned until October, 1862, when he was expelled from the kingdom.

The present ruler, George I., is the second son of the present King of Denmark. He was born December 24, 1845. After the expulsion of the late ruler the Greeks, meeting in National Assembly, elected him King of the Hellenes, on March 18, 1863, and on June 4 of the same year he accepted the crown, his father acting as his guardian, as he was not then of age. On October 27, 1867, he was married to Grand Duchess Olga, the eldest daughter of Grand Duke Constantine of Russia, brother of the late Emperor. She was born August 22, 1851.

The Heir Apparent. — Prince Constantine, Duke of Sparta, is heir apparent to the throne. He was born August 2, 1868, and was married to Princess Sophie of Prussia, the sister of Emperor William II., on October 27, 1889. They have had four children.

The Ministry.—The Ministry is constituted as follows: President of the Council and Minister of Finance, M. Ralli; Minister of Interior, M. Mavromichalis; Minister of Worship and Public Instruction, M. Pharmacmaeoulo; Minister of Marine, Col. Constantinides; Minister of War, Col. Constantinides; Minister of Foreign Affairs, M. Ralli; Minister of Justice, M. Merlopmulo.

The Nation.—The Kingdom of Hellas, as it is correctly styled, includes the three provinces of northern Greece, the five of Peloponnesus, the three of Thessaly and five islands. The legislative power vests in the one-chambered body, the Bule, which is composed of 207 representatives, elected by male ballots to serve four years.



King of Greece.

The principal religion is that of the Greek Orthodox Church, and, while complete religious liberty is guaranteed under the Constitution, all rulers and their heirs must profess this faith. By special enactment this is not required in the case of King George, who still adheres to the faith in which he was educated, that of the Lutheran Church.

Nominally school attendance is compulsory between the ages of five and twelve years. There are good schools of all grades, including many of higher education, but the attendance is not proportionate to the population of the country.

Greece is an agricultural State. Of its 25,000 square miles over 5,500,000 acres are under cultivation, 5,000,000 are in pasture and about 3,000,000 acres are waste land. The manufactures of the country are few and unimportant. The special commerce in 1901 was: Imports, $27,753,000; exports, $18,756,100.

The estimated revenues for 1902 were $23,621,670, while the estimated expenditures for the same period were $23,621,680. The gold debt at the end of 1901 (exclusive of the debt of 1833) amounted to about $139,000,000. In March, 1902, a railway loan was issued to the amount of $4,400,000.

The Greek navy is of little consequence as a fighting force, and the Greek army is based upon what might be called a feudal system, the soldiers, with the exception of those of the chasseur branch of the service, being Jacks-of-all-trades and exercising the functions of the policeman, the fireman and the excise officer. The chasseur branch, in picturesque starched kilts and short jackets, forms the important arm of the service, for it is due to these soldiers that the mountains of Greece are now practically free of brigands.

Events in 1903.—A conflict between the Ministry and the Court was started in March over the Army bills, one of which was framed to deprive the Crown Prince of the chief command of the army. This came as a surprise to the King, although it was known that the Premier had opposed the election of the Prince to the command. On June 27, as a result of the conflict, the Greek Legislature passed a vote of lack of confidence in the Ministry, and M. Theotokis was asked to form a new Cabinet. On the following day a complete list of Ministers was announced and accepted. Owing to opposition on the part of their enemies, these Ministers also resigned, and on July 27 a second new Cabinet was formed, which was accepted by the King the following day. The office of the Minister of Finance was exercised by the Minister of Foreign Affairs, M. Ralli, and that of the Navy by the Minister of War, Colonel Constantinides.

On May 10 the betrothal was announced of Prince Andreas, fourth son of King George, to Princess Alice, eldest daughter of Prince Louis of Battenburg. On August 22 it was announced that Prince George had renewed the demand to have Crete annexed to Greece. The administration of the island is now carried on by the Italian Minister of Foreign Affairs, assisted by the British, French and Russian Ambassadors. On August 11 several earthquake shocks were felt at Athens, and three villages on the Isle of Cythera were destroyed, although but few lives were lost.

In 1902 there was announced an alarming revival of brigandage, especially in western Morea and Thessaly. They practiced a system of extorting money from merchants and wealthy inhabitants on threats of bodily harm, and the terror of the peasantry was such that little information could be obtained. In 1903 the Government made strong efforts to rid the country of these thieves, organizing special constabulary and increasing the military forces in the sections most infested. It was said that the activity of the Government was due not so much to a desire to suppress the brigands as to put a check to the increased emigration to the United States, caused by the terror inspired by the armed bands.

Guatemala.

—

Capital:
NEW GUATEMALA.

Guatemala was discovered by Columbus in 1502, and in 1524 the country became a dependency of Spain. In 1527 it was erected into a captain-generalcy by Carlos V. Its early history was much like that of the other Central American countries, and not until 1821, when the yoke of Spain was thrown off and independence acquired, did it come to have a story of its own. In that year it became a part of the Mexican Empire under Iturbide, and on the failure of this general, in 1823, it became a part of the Central American Federal Republic. In 1823 Honduras withdrew, and eight years later Guatemala became a separate republic. Up to 1862 Guatemala kept clear of the many wars which disturbed her sister republics, but shortly after that date began a succession of internal disturbances which embarrassed the republic financially and hindered its development. The Constitution now in force was proclaimed in 1879 and modified in 1885, 1887 and 1889.

The President.—M. Estrada Cabrera, elected February 8, 1899; term expires in 1905.

The Cabinet.—Secretary of Interior and Justice, Juan J. Argueta; Secretary of Foreign Affairs, Juan Barrios; Secretary of War, Luis Molina; Secretary of Public Works and Agriculture, Jose Flamenco; Secretary of Finances, Guillermo Aguirre; Secretary of Public Instruction, J. A. Mandujano.

The Government.—The President is elected for a term of six years and is not eligible for the following period. The legislative power is vested in a National Assembly, elected by universal suffrage for a term of four years, and a Council of State of thirteen members, partially elected by the National Assembly and partially appointed by the President.

The Nation.—The area of Guatemala is estimated at about 48,290 square miles, and in 1900 the population was 1,647,300. About 60 per cent of the inhabitants are pure Indians and the remainder half-caste, there being very few descendants of Europeans.

The State does not recognize any religious creed, but the Roman Catholic is the prevailing religion. All forms of faith have complete liberty of worship. Education is free and compulsory. Primary schools are supported by the Government, and there are also Government secondary and professional schools. In 1895, the date of the last school census, there were 1,266 Government primary schools, forty-nine private primary and secondary schools, six institutes and normal schools, four professional and nine special schools. One private school in Guatemala City is German and supported by the German Government. There is also a National Library, containing more than 20,000 volumes.

The soil of Guatemala is generally very fertile and is capable of raising almost any sort of fruit and vegetable. By a law passed in 1894 the State lands, except those on the frontier and sea coast, were divided into lots for sale and prices placed within ready reach of the class which it was intended to attract to them. Uncultivated lands may be granted free to immigrants or immigrant companies, to municipalities, villages and schools, or as assistance toward road-making.

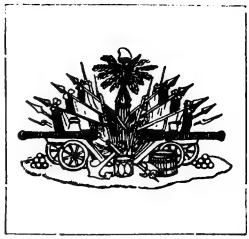
Coffee is the most important crop, and the largest coffee plantations are in the hands of Germans. About 1,680 acres are devoted to tobacco, which is said to be of good quality. Sugar is grown extensively, more than 40,000 acres being devoted to its cultivation. Bananas are grown for shipment and are exported to the United States in quantities. The Government is making an effort to encourage the cultivation of the rubber tree, and in 1899 a law was passed offering 112 acres of national land as a bounty for every 20,000 rubber plants four years old planted after the date of the decree. There is a large forest area in the republic, and a number of valuable woods are found.

The mineral wealth of the country is but little worked. Gold, silver, lead, tin, copper, manganese, antimony, sulphur, salt, lignite and other minerals are found. Gold mining is carried on at the Montagua River, and there are silver mines in the Departments of Santa Rosa and Chiquimula. In the Departments of Alta Vera, Paz and Santa Rosa there are extensive salt deposits.

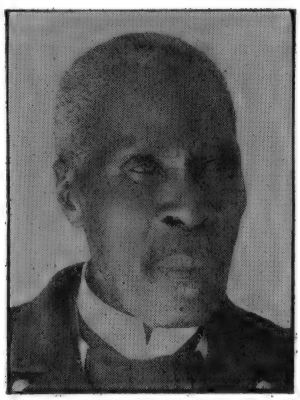
President Cabrera.

There are about 400 miles of railroad in the republic. One line runs from San Jose to the capital, and another from Champerico to Quezaltenango. A line between the capital and Puerto Barrios is nearing completion, and other lines are under construction. Away from the railroads the roads are bad, and goods are generally transported on muleback.

Events in 1903.—On February 10 trouble, which had been brewing between Guatemala on one side and Honduras and Salvador on the other, began to assume alarming proportions. Guatemala was declared in a state of siege, and prepared to resist any attack made by the combined republics. On March 18 troops were withdrawn from the frontiers, and the country was declared quiet. Internal disturbances at the same time had caused the President to enlist or impress about 20,000 additional troops, who were discharged when their need had passed. On May 29 the Presidents of Guatemala and Salvador had an interview on a vessel in neutral waters, and after a six hours' conference succeeded in satisfactorily arranging the differences between the republics.



Plans were perfected in June to give Guatemala a stable currency, and put an end to the financial depression which had prevailed there for several years. It was decided to adopt a silver standard for the present, with the idea of ultimately going to a gold basis. On April 17 the volcano of Santa Maria broke out into violent eruption, causing much damage, especially from ashes, which covered the fields for miles in the vicinity of that mountain. The damage done to the coffee crop was largely offset by the yield of new tracts in other parts of the country, and it was estimated that the crop would be the largest ever produced.



Haiti.

—

Capital:
PORT AU PRINCE.

Haiti was the sixth point of land discovered by Columbus in 1492, and was named by him Hispanola. At that time it is estimated that the population numbered 1,000,000. The discovery of gold in the Western Hemisphere drove to the new country a band of adventurers who made the natives work the mines and the soil, until, after fifteen years of Spanish occupancy, the 1,000,000 people had been reduced to not more than 60,000. Natives from surrounding islands were brought over to take the places of those killed by the Spaniards, but were found not to suffice, so in 1502 Africans were purchased from Portugal for use in the mines. In 1520 the English and French united against the Spanish and made the island of St. Christopher the base of their operations. Driven thence by the Spanish, the French fled to Tortuga Island, and, with their number increased by other fugitives, they soon took possession of the larger island, and in 1530 French occupation of the country was commenced. Cargoes of black slaves were brought, and settlements advanced rapidly into the interior. When the French Revolution broke out the mulattoes and blacks on the islands were ripe for a similar outburst. A revolution began, fiercer than that carried on in the mother country, and in 1793 a general emancipation was declared. In 1804 Haitian independence was proclaimed. Internal strife occupied the attention of the people for eighty years, and during that time there have been seventeen Presidents, nearly all of whom met with violent deaths or were driven into exile.

President Alexis Nord.

The President.—General Alexis Nord.

The Government. — The legislative power is vested in a Chamber of Communes and a Senate. Members of the former body are elected for three years by direct popular vote, and the members of the Senate for a term of six years by the vote of the Commune. The President is elected for seven years by the joint vote of the two Chambers.

The Nation.—Haiti, which embraces about one-third of the island of Haiti, has an area of about 10,204 square miles, and in 1901 had a population estimated at 1,294,400. Nine-tenths of the people are negroes and the remainder are mulattoes, there being very few of European descent. The language is French, though a dialect known as Creole French is generally spoken.

Roman Catholic is nominally the State religion. Primary education is free, but although the republic spends considerable on them, the schools are not well organized and the educational system is generally imperfect. There are about four hundred national schools, several private schools and five public lycees.

Haiti depends chiefly upon agriculture for her income. The most important product is coffee, of an excellent quality and raised without difficulty. The high export duty has prevented the development of its cultivation. Cacao is extensively grown in almost all parts of the republic, and the cultivation of tobacco is extending. There are now several cigar and cigarette factories that are successful. Sugar is grown, and there are three sugar-making establishments, but no refineries, and rum and other spirits are made, but not exported. The cattle industry, which had begun to develop, received a check by an increase of export duty, and now is decreasing in importance. Logwood is an important product of the republic, and other valuable woods are exported.

The mineral resources are entirely undeveloped. Gold, silver, copper, iron, antimony, tin, sulphur, coal, kaolin, nickel, gypsum, limestone and porphyry are found, but are little mined. In the last few years efforts have been made to work the copper mines, and concessions have been granted for mining coal and iron.

Haiti has but one railway open, that from Cape Haitian to Grande Riviere, a distance of fifteen miles. Other roads are projected, and a line is under construction from Port au Prince to Salt Lake, a distance of fifty miles, with the idea of ultimately connecting the capitals of Haiti and the Dominican Republic. The roads are generally bad.

Events in 1903.—In January President Nord granted amnesty to more than a hundred former rebels, followers of General Firmin in 1902. They had been living in exile in Jamaica, and more than half were in destitute circumstances. On April 4 the Haitian Cabinet resigned, on account of a vote of censure against the Ministers because of their failure to proceed against certain persons responsible for a disturbance which occurred March 30. President Nord refused to accept the resignations, preferring the old Cabinet to continue the investigation of alleged extensive frauds in the issuance of Haitian Government securities, amounting to $2,000,000. A commission was appointed to inquire into the scandal, and in September a report was made, implicating several bank officials and prominent men, including ex-President Sam and nearly all of his ex-Ministers. In February a plan was drawn up providing for the issuance of $3,000,000 in paper money, to be guaranteed by 10 per cent of all duties paid in gold, by doubling the import taxes and raising all export taxes except the tax on coffee. On February 26 the entire town of Port de Paix was destroyed by fire. All the shipping in the harbor was burned, with the exception of a vessel belonging to the Haitian Company. Port de Paix was the chief seaport of the West Indies for the shipment of logwood, and is historically interesting from the fact that it was here that Columbus founded the first colony in the New World.

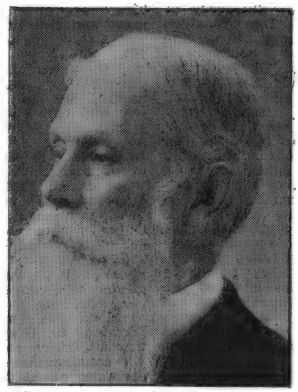
Hawaii.

—

Capital:
HONOLULU.

The Hawaiian Islands have an area of 6,640 square miles, and by the census of 1900 the population was 153,727. Hawaii is a small group of islands in the Pacific Ocean, about 2,100 miles west-southwest of San Francisco. The islands were discovered by the Spaniards in 1549, and examined by Captain Cook in 1778. During the greater part of the nineteenth century they formed an independent nation whose integrity was recognized by the Powers. In 1893 the then reigning queen, Liliuokalani, was deposed and a provisional government formed. The following year the country was proclaimed a republic, with a President and Legislature of two houses. The islands were acquired by the United States by an act of Congress, July 7, 1898, and were organized into the Territory of Hawaii, April 30, 1900, with the capital at Honolulu, on the island of Oahu.

The islands are to a great extent mountainous and volcanic, but agriculture flourishes and the soil is highly fertile and productive. The staple industries are sugar and rice, and there are extensive exports of coffee, hides, bananas and wool. In 1902 the exports to the United States amounted to $24,700,429, of which $23,920,113 was for sugar.



Six lines of steamers connect the islands with the United States, Canada, Australia, New Zealand, China and Japan. About 200 miles of railway have been constructed in the islands of Hawaii, Maui and Oahu. The telegraph and telephone systems have been recently developed, until all the islands have been connected by telegraph, and nearly every home in Honolulu has a telephone. A Marconi wireless

telegraph station has been in successful operation since March 2, 1901. The new Pacific cable now connects Hawaii with the rest of the world. Honolulu is lighted by electricity and has several electric car lines.

Nearly all the native Hawaiians are Christians, though the Buddhists outnumber any single sect in the islands. The immigration is largely Japanese, who constitute the better class of laborers and farm hands on the sugar plantations. There is a steady immigration from "the States," and business in the capital is coming more and more into the hands of Americans.

Citizens of Hawaii have all the rights granted to citizens of other Territories of the United States, with the exception that ability to read and write the Hawaiian language is considered as admitting to the franchise. For military purposes Hawaii has been attached to the Department of California.

The manufacturing interests of the islands consist of two classes—the manufacture of small articles for local consumption and the production of sugar on a large scale. Sugar mills of the best kind and equipped with the most modern machinery have been established in various parts of the territory, and the industry has continually increased in importance. Difficulty in obtaining suitable labor has handicapped the development of the sugar industry, as well as that of other agricultural and manufacturing industries. Chinese laborers or coolies were formerly brought freely into the country, but in 1900, when Hawaii became a Territory of the United States, the immigration of the Chinese was forbidden. White laborers have been found to be useless on the sugar plantations. Governor Dole, in his report of 1902, asked Congress to permit the immigration of a limited number of Chinese farm hands.

Governor Sanford B. Dole.
Copyright, Purdy, Boston.

Events in 1903.—Hawaiians resented the report of the United States Commission, made in January, regarding the establishment of a national leper settlement at Molokai, which contained the statement that there are many lepers in the islands outside the settlement already established. It was denied that another national settlement was needed and that the lepers of the islands were not cared for. Ex-Queen Liliuokalani visited the United States early in the year to continue her fight for payment for crown lands seized by the republic of 1894. On February 24 the Senate Committee on Appropriations recommended that $200,000 be paid the ex-Queen. The conference on the Sundry Civil bill later struck out the recommendation. When the Hawaiian Legislature was convened in February the native, or Home Rule, party upset the victory gained by the Republicans at the November elections by organizing the House of Representatives and thereby gaining control of legislation.

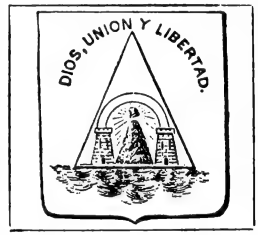
Prince Albert Kunuiakea, of the race of Kamehameha, died March 12 of consumption. He was fifty-two years old, and but for the successful coup of David Kalakaua, who deposed the Kamehameha dynasty, would have been in line of succession to the throne of Hawaii.

The Legislature passed resolutions over the veto of Governor Dole in April, making the Hawaiian language the official language of the Territory, as well as English.

Honduras.

—

Capital:
TEGUCIGALPA.



The coast of Honduras was discovered by Columbus in 1502, and in 1626 Cortez, at the head of an army which he brought from Mexico, took possession of the country and founded the towns of Trujillo and Puerto Caballos. The whole portion of Central America was shortly after declared to belong to Spain, and the capital was made at Gracias. In 1823 Honduras became a part of the Central American Federation, but in 1839 became a separate republic and took part in the wars and intrigues which followed one another until 1862. Insurrection and civil strife contributed to retard the progress of the republic in its early history, and especially in 1861, when the clergy preached dissensions against the Government. A treaty of peace and amity was signed with Spain in 1866, giving to Honduras complete freedom and final relief from Spanish intervention.

The President.—General Manuel Bonilla (elected in 1903).

The Cabinet.—Secretary of Treasury, Dr. S. Medal; Secretary of Interior, Dr. D. Gutierrez; Secretary of War, Col. S. Barahona; Secretary of Public Works, Dr. A. Membreno; Secretary of Justice and Public Instruction, Dr. M. R. Davila; Secretary of Foreign Affairs, Dr. M. Vasquez.

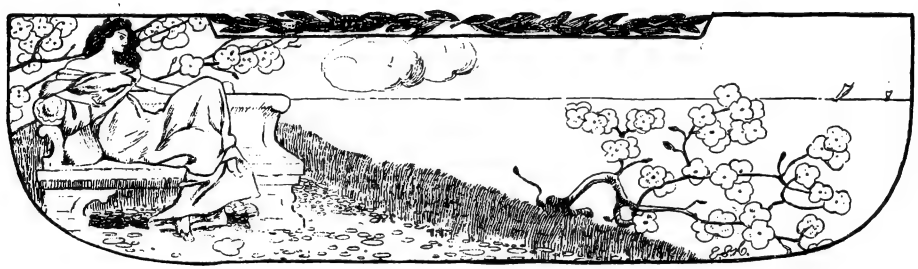
The Government.—Legislative power is vested in a Congress of Deputies, in the ratio of one for each 10,000 of population. The President is elected by popular vote for a term of four years. The Government is carried on under a charter proclaimed in October, 1894.

The Nation.—Honduras has an area of about 46,250 square miles, and in 1900 had a population of about 587,500, exclusive of uncivilized Indians. The republic is divided into sixteen departments. The larger part of the population consists of aboriginal Indians, and the sparse European-descended people are of Spanish origin.

The prevailing religion is the Roman Catholic, but it is not supported by the State. All forms of worship have perfect freedom. Education is free, and compulsory between the ages of seven and fifteen. It is entirely secular, the clergy having no part in the public schools. There is a central university at the capital, and a school of jurisprudence is established at Cornayagua. There are 683 primary schools and 28 secondary.

President Bonilla.

Honduras is an agricultural country, and the cultivation of bananas is beginning to assume great importance. In September, 1902, a new department, that of Atlantida, was established on the north coast, embracing rich banana lands, on account of the rapid increase of that industry. Tobacco, sugar, maize, cocoanuts, sarsaparilla and coffee are cultivated extensively, and rice, indigo and wheat are grown in small quantities. Cattle raising is of importance, the animals being raised for their hides, though dairy farming is carried on to some extent. The Government offers exceptional facilities for the acquisition of land by private persons and companies for agricultural and mining purposes, but labor is said to be scarce.



Gold, silver, platinum, copper, lead, zinc, antimony, nickel and other minerals are found in almost every department, and there are several gold and silver mines being worked. Deposits of coal have been found in several localities, but no great attempt has been made to develop them. Capital and facilities for transportation are both lacking.

In general travelling and transport are accomplished by mules. There is a railroad from Puerto

Cortez to San Pedro Sula and La Pimienta, and another connecting Tegucigalpa with San Lorenzo on the Pacific coast. An excellent macadamized highway connects these two cities, and roads in other parts of the country are under construction.

Events in 1903.—In January President Sierra refused to turn over the Presidential power of Honduras to Manuel Bonilla, the president-elect, whose election had not been confirmed, and on February 1 Senor Bonilla declared war against Sierra, starting a revolution that culminated in the general overthrow of the government and the complete success of the revolutionists. The United States Pacific squadron was at once ordered to the Honduranian coast, ostensibly for drill purposes, but incidentally to look after American interests. The war proved to be one of the most intense that has occurred in Central America for several years, though the loss of life was small. President Sierra made a firm stand, and was backed by Nicaragua and Salvador, while Bonilla had the moral support of Guatemala. Several American business men were captured in March and held as prisoners of war by the Honduranian Government, but were released and received apologies. On February 18 Sierra made his secretary, Arias, ad interim President, and took the field at the head of the government troops. He met with successive reverses; Arias was compelled to flee, and on April 15 Tegucigalpa, the capital of the republic, was taken by the revolutionists, ending the war. Sierra fled to Salvador, and Bonilla assumed the Presidency. On April 22 he had selected his Cabinet, and had outlined his policy. Bonilla was, before his election, a small farmer, the poorest man ever elected to the Presidency of a Central American country. It was said that the revolution had been financed by a German firm. On June 15 the Honduras Railroad, leased by Americans, was confiscated by the government for alleged breach of contract.

President Bonilla and Vice-President Manuel Dalva were inaugurated on May 17, the President expressing in his address his desire to carry out the constitution and promote progress and the material welfare of his country.

Idaho.

Capital:
BOISE.

Idaho has an area of 84,290 square miles, and by the census of 1900 had a population of 161,722. The region within the present limits of the State was included in the Louisiana Purchase of 1903. Idaho was included first in Oregon and subsequently in Washington. The first settlement of consequence was the Coeur d'Alene Mission, which was established in 1842. The permanent settlement of the Territory did not begin until the discovery of gold in 1860. Idaho was created a Territory by an act of Congress March 3, 1863, and then embraced the present State of Montana and nearly all of Wyoming. It was admitted to Statehood July 3, 1890.

Mining and agriculture are the principal industries of the State, and the manufacturing interests are dependent upon the forests, mines and farms, and are incidental to these. Flour and grist milling and car construction and repair are of chief importance. The manufacture of lumber and timber products has recently become of much consequence, and this industry has developed rapidly. There are about 7,000,000 acres of good timber land within the State.

The mountains of Idaho are well supplied with gold, silver, lead and copper, and more than one-fifth of the lead product of the United States is obtained from this State. In the production of silver Idaho ranked fourth in 1899.

Gov. John T. Morrison.

Events in 1903.—Contracts were let in March for the reclaiming of 270,000 acres of arid land in southern Idaho by a syndicate composed of Philadelphia capitalists. The company contemplates spending nearly $5,000,000, to be used in constructing two irrigation canals and laterals having an aggregate length of over one thousand miles. The main canal will be sixty-nine miles long and eighty feet wide at the bottom, and will take water from Snake River. It is purposed to develop Shoshone Falls and to erect an electric power plant for operating a railway forty-five miles long, covering the irrigated country. The construction of the canals and laterals will require five years. On March 14 a rich gold strike was reported from Lewiston, in Cave Gulch, in the Snake River country. The ore is said to be particularly rich and easy of access, and the news brought about a stampede of miners and prospectors from Lewiston and vicinity. On June 3 a terrific cloudburst flooded the valleys about Nez Perces, resulting in the loss of two lives and considerable damage to property. In Northern Idaho serious floods caused by the rapid melting of snow made trouble along the Great Northern Railway in the early part of June. Several towns were flooded and people had to use rowboats. On January 13 the State Legislature elected Judge Waldo B. Heyburn, of Wallace, United States Senator from Idaho.

The crops in 1903 were fully up to the average, though not equalling those of 1902, when the yield exceeded that of previous years. A continued increase in the acreage devoted to wheat is rapidly bringing this State into the ranks of the principal wheat growers of the country. In the raising of Spring wheat Idaho stands well to the front, her yield this year being about 3,000,000 bushels. Fruit growing has rapidly increased, and the profits from this industry exceeded $1,000,000 in value.

Illinois.

Capital:
SPRINGFIELD.

Illinois was settled by the French, as a consequence of the enterprises of Father Marquette, in 1673. Dispute between the French and English ultimately resulted in the war that ended in the capture of Quebec and the dispossession of the French throughout all the country east of the Mississippi. In 1809, after Indiana, Ohio and Michigan had been set off, Illinois territory included the whole of the region out of which Illinois, Wisconsin and part of Minnesota have since been carved.

The area of Illinois is 56,650 square miles. The estimated population in 1901 was 4,930,000. Chicago is the second city in the United States. Its population in 1900 was 1,698,575. In 1903, according to a conservative estimate, based on the city directory enumeration, the population was 2,231,000.

There is no State debt.

In point of manufacturing importance Illinois ranked third among the States in 1900, the percentage of industrial wage earners being 8.2 per cent of the total population. Proximity to abundant coal and iron supplies and the advantage of central location, making the State a natural distributing centre to the West and the South, are chiefly responsible for this rank as a manufacturing State. With 10,997 miles of railway in 1900, Illinois led all other States as to mileage. Lake Michigan and the Mississippi River also, by the transportation facilities they provide, stimulate commerce and manufactures.

Slaughtering and meat packing are the most important industries. The animal products in 1900 were valued at $287,922,277. Chicago is the great live stock market for the West and Northwest, and in consequence of inventions which make possible the utilization of all animal by-products, a large number of highly important industries have sprung up around the stockyards packing plants.

The manufacture of foundry and machine shop products ranks second in importance in the State, and the manufacture of liquors third. Peoria has become the largest producer of whiskeys and high-wines in the United States. The manufacture of agricultural implements is an important industry. Illinois furnishes this class of goods to the greater part of the West.

Some of the most important legislation of the General Assembly in 1903 affected the city of Chicago. What is known as the Mueller law, providing for municipal ownership of street railways, was enacted only after a bitter struggle, one of the features of which was an open charge of legislative corruption, which led to an official investigation. The law gives the municipalities of the State power to acquire, own and operate street railways, or to lease the same to any incorporated company for a period of not more than twenty years. Cities are empowered to reserve the right to take over from a lesser company its railway property at or before the expiration of the grant. No franchise for more than five years shall be operative except after submission to popular referendum.

By resolution the Legislature opened the way to a constitutional amendment that shall wipe out the present complex town system of government in Chicago.

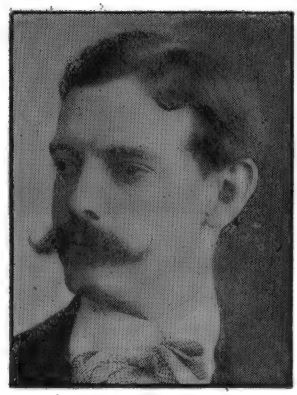
The extension of Grant Park, on the lake front, to include an area of 200 acres, and considerable extensions of the South Park system were authorized. The location on the lake front of the John Crerar

Free Library and of the Field Columbian Museum was authorized, making possible the utilization of Marshal Field's offer of $10,000,000 for the museum bearing his name. Two hundred and fifteen acres are to be added to Lincoln Park, and the construction of a grand boulevard over reclaimed submerged lands in Lake Michigan, connecting Lincoln and Jackson parks, was authorized.

The Chicago sanitary district was enlarged by the annexation of the Evanston and Calumet districts, to enable the sanitary trustees to end the pollution of the lake water supply and so to make effective the work of the sanitary channel.

The Torrens system of simplified land title transfer was extended in its operation by making mandatory legislation for executors and administrators of all lands coming into their control.

A new compulsory education law provides that every child between the ages of seven and fourteen shall have at least 110 days of schooling in each and every year.



The Child Labor law prohibits night work by children under sixteen, restricting the working day to eight hours and prohibiting the employment of children, though of legal age, who cannot read and write. Children under fourteen may not work during the school year.

The Convict Labor law restricts the employment of prisoners to the manufacture of goods for the use of the State and its political divisions, forbidding the sale of such goods in open market.

The Mechanics' Lien law was subjected to thorough revision.

The Legislature legalized the use of voting machines wherever sanctioned by popular vote.

The Legislature set a speed limit of fifteen miles an hour on automobile travel, except as otherwise ordered by city and village corporations.

Gov. Richard Yates.

The College of Agriculture and the Agricultural Experiment Station received each an appropriation of $50,000, committees of the organized farming interests of the State being admitted to participation, in an advisory capacity, in the disbursement of the funds.

The total of appropriations amounted to about $15,000,000.

A noteworthy feature of the session was the revolt of 97 members of the House of Representatives against the arbitrary exercise by the Speaker of his parliamentary authority in such a manner as to promote or retard legislative work at his will. This non-partisan revolt is regarded as having put an end to the so-called "gavel rule" in the House.

The year 1903 was memorable in Illinois for floods, crop damage, labor troubles and a significant outbreak of race hatred. The State, as a whole, suffered less than others of the Central West from the unfavorableness of the weather during the growing season, but the cold Spring and incessant rains delayed corn planting, and a cool Summer retarded growth. An early frost in mid-September caused alarm, but the damage done was exaggerated.

The bottom lands of southern Illinois suffered from the June floods, and much damage was done in East St. Louis, Ill., which for several days was quite cut off from the East.

The strikes, which began in Chicago in January with the stoppage of elevators and the cutting off of light and heat in a number of large office buildings, continued throughout the year. The strikes productive of most general inconvenience were the laundry workers' walkout and the oft-repeated disagreements between hotel and restaurant waiters and their employers. More important among the other labor troubles were the strikes of the wagon and carriage makers, of the gasfitters and teamsters employed by the People's Gas Light & Coke Company, of 2,000 employes of the Deering and 500 of the McCormick plant, of the teamsters and steam engineers at the stockyards, of the bakery employes and of the employes of the Kellogg Switchboard Works. On May 15, 20,000 men were on strike in the city of Chicago. Labor leaders were not unanimous in approval of many of the strikes, and in June the national union of the blacksmiths and teamsters evidenced their disapprobation by wholesale suspension of strikers.

Never before in the history of the State did the lynching of a negro occur so far north as in 1903. The outbreak of racial animosity began in April with the lynching of a negro at Santa Fe, in the southern part of the State. In June a negro school teacher named Wyatt was hanged and his body burned at Belleville, his crime being the murder of the white superintendent of schools. Public sentiment seemed against the prosecution of the lynchers, and the case was taken up by Attorney-General Hamlin. In June a mob besieged the Peoria jail in an attempt to lynch a negro murderer, but the prisoner was spirited away. In July a mob at Danville, intent on lynching a negro prisoner, sought to batter down the doors of the jail, but was repulsed by the Sheriff, a number of the would-be lynchers being shot. A negro who fired into the mob, killing one of its members, was immediately hanged. Indictments were speedily returned against members of the mob who were identified and ten men and one woman were convicted and sentenced to imprisonment.

Indiana.

—

Capital:
INDIANAPOLIS.

Indiana has an area of 36,350 square miles, and by the census of 1900 had a population of 2,516,462. Indiana first constituted a part of New France and later of the Northwest Territory. The exact date of the earliest settlement in the section now within the bounds of the State is not known. In 1702 a party of French Canadians established several posts along the banks of the Wabash. Until 1763, when the country was ceded to the English, little is known of the early settlers.

By the treaty of 1783 Indiana was included within the United States. In 1788 an Indian war broke out, causing great distress, chiefly at Vincennes. In 1791 occurred a battle at Tippecanoe, and this victory for the whites and subsequent defeats of the Indians reduced the hostile tribes to subjection and broke up a dangerous confederacy.

By the treaty of 1795 the United States obtained possession of several valuable tracts of land and began to encourage settlement. In 1800 Ohio was erected into a separate Territory, and all the country north and west was included in the new government of Indiana. The Territorial Government was organized July 4, 1800, with William Henry Harrison as Governor. In 1805 Michigan was set off, and in 1809 Illinois became a distinct Territory. In 1811 the general Government began to exert its power against the Indians, who had become excited through the eloquence of Tecumseh, and Governor Harrison proceeded against them at Tippecanoe. The Indians were utterly routed and peace was restored. During the war with Great Britain in 1812-1814 they became once more aroused, but were again subdued. June 29, 1816, a constitution for the State of Indiana was adopted, and on December 11 of the same year the Territory was admitted to Statehood. In 1827 the Erie Canal opened an outlet for the produce of the West, and the national road was commenced. These stimulated immigration, and the new State grew rapidly. A new constitution was adopted in 1851, calculated especially to promote great public works. A free banking law was passed by the Legislature the same year.

Events in 1903. — The Indiana Supreme Court handed down an opinion, April 1, declaring the Minimum Wage law passed by the Legislature of 1901 to

be unconstitutional, in that it destroyed liberty of contract. The law, as passed, provided that no one employed on work done for counties, cities or towns should receive less than 20 cents an hour. On January 20 the State Legislature re-elected Charles Warren Fairbanks to the United States Senate, the Democrats giving a complimentary vote to Benjamin F. Shively, former candidate for Governor.

On February 26 about forty arrests were made in Fort Wayne on indictments found by the Grand Jury in relation to charges of bribery, intoxication and embezzlement. Several city officials were implicated.

The Socialist State Convention was held at Indianapolis April 25. Large gains for the party were reported from all the counties represented. On May 5 town elections were held throughout the State. Where party lines were drawn the Republicans were generally successful, but in many of the towns the candidate chosen was the one nominated by the citizens, irrespective of party.

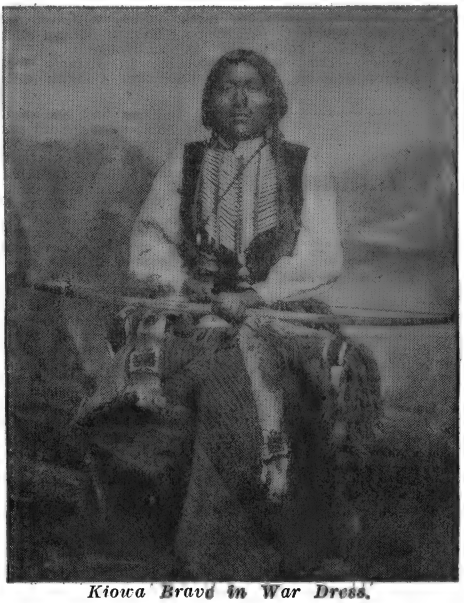
A successful fight carried on by the Anti-Saloon League in the town of Winslow resulted in a retaliation on the part of the mob element in January. Several of the League members were attacked and one was killed. Stores and residences were set on fire or attacked with dynamite. On July 5, at Evansville, Policeman Massey, in attempting to arrest a negro, was shot and killed. The negro was placed in jail, and at night a mob, excited by the incident and probably by the recent ingress of negroes from the South, surrounded the jail and attempted to get the prisoner to lynch him. Finding this impossible, the mob turned its attention to the negro settlement of Baptistville. The rioting lasted several days. Nine persons were killed and thirty-nine wounded. Eight companies of infantry were necessary to bring about peace.

Gov. W. T. Durbin.

A tornado struck southern Indiana on April 3 and caused a large property loss in the farming districts near White River. A heavy thunderstorm on May 28 killed seven persons near Indianapolis.

The justices of the Indiana Supreme Court were made the subjects of an attack by Senator E. A. Dausman on the floor of the Senate February 18. He was fighting a bill which provided that all engrossed bills be submitted to the Supreme Court for opinions as to their constitutionality before they are passed. Senator Dausman said that the justices were the laughing stock of law students in all the schools on account of their decisions. Dausman had previously expressed disapproval of the fact that the judges had been charged with lobbying personally to obtain an increase in their salaries.

Indians in the United States



FRANK T. CUMMINS,
Mgr. of the
Indian Congress.

"The passing of the American Indian from a life of savagery and lawlessness to one of industry and peace marks a transition in the life of the nation. With this transition disappears the life of adventure and daring that has characterized the red man, and in its place comes the new life in which the Indian is being slowly educated to take his place worthily among the citizens of the country and to enjoy all the rights which this great privilege entails. The Indian of yesterday has become only a memory; the Indian of to-day is absorbing the attention of the Legislature in the matter of granting him Statehood or a Territorial form of government. The Indian of to-morrow will undoubtedly be found enjoying all the rights accorded to his white brother."

So says a writer in a recent issue of Current Literature. The Indian has for centuries resisted and resented and finally acquiesced to the encroachment of the white man, and now he faces inevitable absorption by the white race. After three centuries of incessant warfare be-

Little Raven's Sons.

Kiowa Bravo in War Dress.

tween the Indian and the white settlers, the beginning of the nineteenth century found only a few tribes east of the Mississippi capable of offering resistance to the whites. Those that are now called civilized tribes displayed such courage and endurance in the bloody wars which were waged and which baffled the military power of the United States that they were able to retain the tribal integrity and when defeated enjoyed the respect of their conquerors. These were the five principal civilized nations—Cherokee, Choctaw, Creeks, Chickasaws and Seminoles—numbering about 85,000 people at present, and they now represent the tangible remnant of the aborigines of North America.

In removing these Indians to the reservations west of the Mississippi the United States resorted to diplomacy, showing the respect felt by the Government for those who had fought well and long for what they considered their rights. The nomadic Apaches, Comanches and Arapahoes were treated much in the same way, though they have clung to their wigwams and inherited ideas of dress. The civilized tribes in their westward journey took with them

An Arapahoe Camp.

several weaker tribes, who became assimilated into the Five Nations. One by one the five tribes adopted constitutions modelled closely after that used by the United States.

Scarcely had the tribes settled in their new homes in the West when immigration of white settlers began. The Indians intermarried with the whites, and sometimes with the negro slaves they had brought with them in their migration. All the nations except the Creeks passed laws admitting the intermarried whites to full citizenship. In some of the tribes, however, negro intermarriages are discountenanced and the color line is rigidly drawn in social matters. Of the full bloods left in the largest reservations most of them have adopted the white man's habits and dress, but have not adopted his characteristics, and they are best described by the word "shiftless."

The Indian does not seem able or willing to seek employment, and shows a disinclination toward directed work. It would seem that the best method of giving him a chance to approach nearer a condition that will permit of full citizenship is to give him employment that will allow him not only to earn a good living, but to become educated in the way of the white man. It is not of consequence what this employment is, so that it is honorable and legitimate. It may be in agriculture, in manufacture or in exhibitions. When an Indian is employed for exhibition purposes it appears he gets the greatest good from travelling and from meeting with all sorts of people and many conditions of life. He is given an opportunity thereby to broaden his horizon, to overcome race prejudices and in every way to fit himself for citizenship and as a teacher of his brothers. At the time of the Sioux uprising, in 1890, Indian agents asked that those Indians then with exhibitions be called in to the reservations on account of their knowledge of the territory and of the white man. Perfect confidence was felt in them, and they were given the responsibility of leading the white soldiers as guides and scouts, and in very few if any cases was the confidence misplaced. The desire was expressed by one of the officers who had charge of some of these Indians that all of the red men on the reservations be sent to exhibitions and thereby learn that they had a friend in the white man, and that opposition to him would be met with annihilation. Though some decry the presence of the Indian in shows, no one can help but realize that this method must give him a broader opportunity than schools or mission work can furnish, and be far better for his general welfare than living on reservations.

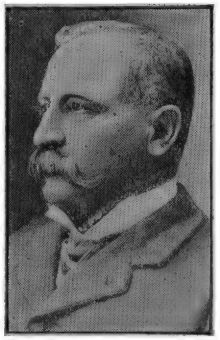
Chief Geronimo, called the "human tiger," who was at the Pan-American Exposition in the Indian Congress, expressed to General Miles the result of mingling with white men. In his own language he said:

"The big white chief, General Miles, at one time, my heart hates him. Now I see the pale face numbers like the stars, the red man numbers like the trees, and the great pale face, having cut the trees, leaves only few in numbers. I am now the friend of the pale face and I am telling my brothers that I have seen my wrong in fighting against him. I have told my braves and squaws that from this time on we will all shake hands and be friends."

Geronimo was one of the fiercest of the chiefs and it cost the Government nearly $2,000,000 to effect his capture. Chief Joseph, who has been called one of

the greatest generals the world ever saw, has also come to consider the white man as his friend and to recognize the advantages of association with him.

The Indian can be thoroughly trusted after he has found his employers trustworthy, and can be trusted by the Government after he has found the Government worthy of trust. Only by association with outsiders can he be sure of this, and there seems to be no better way to bring him into contact with the world than by giving him place in exhibitions.



The old Indian is hopelessly conservative. He may be able to teach others, but he clings to his old customs, to the camp fire, the slovenly cooking, the paint and feathers and the dancing of his fathers. The younger Indian is progressing. If he goes to one of the schools provided by the Government he goes back to the reservation with new ideas thoroughly instilled into him and ready to show his fellows at home the benefit of his teachings. If he has been in an exhibition, he is just as ready to show his newly-acquired knowledge. He may wear feathers and paint on parade and in the arena, but he is willing and anxious to put on civilized costume and mingle with crowds without fear of attracting undue attention. He finds it hard to overcome racial habits, and if he is called lazy it is because he has no tradition of work to make him energetic. He has to learn that work is necessary, and that those with whom he hopes to be able to associate have to work in order to gain respect.

THE GOVERNORS OF THE CIVILIZED TRIBES.

Indian Territory.

Capital:
TAHLEQUAH.

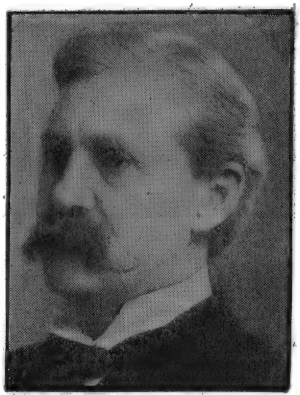
Indian Territory has an area of 31,154 square miles, and by the census of 1900 had a population of 391,960. Indian Territory is an unorganized Territory of the United States, set apart as an Indian reservation in 1834. The section was a part of the Louisiana Purchase of 1803, with a western strip obtained from Texas. Its history begins with the advent of the "reservation" Indians in 1837, and since then its story has been largely that of the nations inhabiting it. There are five nations and seven reservations in the Territory, the nations having distinct forms of government. They are made up of the five civilized tribes—the Cherokees, Creeks, Seminoles, Chickasaws and Choctaws—who own the entire region. Each tribe has a Governor and a Legislature, and the laws are made subject to the indorsement of the Department of the Interior at Washington. In the towns and on some of the farms are a number of whites who lease the ground from the Indians and live within the nations by special permit. Many have been adopted into the tribes and have tribal rights. The real Indian has not so much prominence as formerly, as there has been much intermarrying between whites and Indians and negroes and Indians. Many of the negroes now in the Territory are descendants of slaves formerly belonging to the Indians.

The land of the Territory is apportioned among the various tribes, each member receiving his share of ground. They are permitted to dispose of the land under certain restrictions. The Government has undertaken the listing of each tribe, and the work is partly complete. Each tribe has primary and academic schools for the children, supervised either by the Federal Government or the tribal heads. There are several railroads in the Territory, and each of these is rapidly increasing its trackage, so that many hitherto inaccessible sections may be reached.

Agriculture is the principal occupation in Indian Territory, although the increasing number of whites has brought about the development of certain manufacturing enterprises of local importance. Stock raising is carried on extensively.

By a Congressional act of May 19, 1902, municipalities in Indian Territory with a population of 2,000 or more inhabitants were given power to issue bonds up to 10 per cent. of ther assessed valuation for the construction of public works, such as sewerage systems and water works, and for the erection of schools. Two-thirds majority of the municipal electors was made necessary for the issuance of these bonds and a sinking fund was to be created for the redemption of the bonds within twenty years. In those towns where bonds had already been issued by

special act of Congress the bonds allowed under this act were to be proportionately diminished.



A daily newspaper edited by an Indian for the Indians of the Creek and neighboring tribes was started early in the year at Eufaulia. The editor is Alexander Posey, son of a Creek mother and Scotch father, and one of the most prominent and influential men in the Territory. The Daily Indian Journal is its title, and it is printed in ordinary newspaper English, with the exception of one editorial column, which is printed in a Creek dialect, a plan that has proved pleasing to its readers.

Iowa.

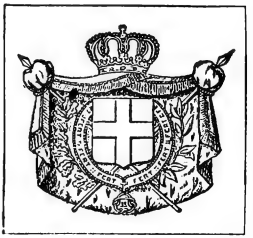
Capital:
DES MOINES.

Iowa has an area of 56,025 square miles, and by the census of 1900 had a population of 2,231,853. Iowa was included in the Louisiana Purchase of 1803. The first settlement of whites within its borders was made in 1788, when Julien Dubuque, a Canadian Frenchman, obtained a large grant of land. He built a small fort, and carried on the mining of lead and trading with Indians until 1810. In 1834 the territory now included in Iowa was placed under the jurisdiction of Michigan, and in 1836 under that of Wisconsin. In 1833 several companies of Americans from Illinois and other States settled in the vicinity of Burlington, and later made settlements at other points along the Mississippi. On June 12, 1838, Iowa was erected into a separate Territory, including all the country north of Missouri, between the Mississippi and the Missouri rivers, to the British line. This embraced the greater part of Minnesota and all of the Dakotas. In 1839 the Government moved from Burlington to Iowa City. In 1844 a State constitution was formed and a petition sent to Congress for Statehood. This petition was refused on account of constitutional limits assumed, and by an act of Congress in 1845 boundaries were defined that would be acceptable. On December 26, 1846, Iowa was admitted to the Union. The capital was removed to Des Moines in 1857. In 1857 a new State constitution was ratified, by which negroes were given the right of suffrage and the obligation of military duty.

*Gov. Albert B. Cummins.**

Iowa is primarily an agricultural State, and its manufacturing industries have increased but slowly in the past six years and are not yet solidified in manufacturing centres. Formerly the manufacture of lumber and timber products was of chief importance, but this has decreased, owing to the misuse and exhaustion of the forest lands. Wholesale slaughtering and meat packing is now the most important industry in the State. Factory manufacture of butter, cheese and condensed milk ranks second, while flour and grist milling stand third. An industry peculiar to the State is the manufacture of pearl buttons from mussel shells found along the Mississippi and other rivers.

Events in 1903.—The Supreme Court February 2 declared valid the cigarette tax imposing $300 on all dealers in cigarettes. At the Republican County Convention, held at Des Moines March 14, Governor Cummins announced his intention to carry the "Iowa idea" of tariff revision into the National Republican party. The Iowa idea calls for a reduction of certain duties, but with regard kept for the protection idea of 1897.



The Democratic State Convention met at Des Moines June 23. In spite of a plan started by committee managers early in the year to effect a union between the gold and silver Democrats, the convention was the scene of a hot fight between the factions, which resulted in a victory for the anti-silver wing. The convention refused, by a vote of 464 to 354, to reaffirm the national platform of 1900. A complete State ticket was nominated. The Democratic campaign opened September 12, when J. B. Sullivan, the nominee of the party, delivered his first address.

A tornado of large proportions struck the western part of the State May 25, devastating several villages and causing the loss of a number of lives. On May 28 Des Moines suffered from a flood which drove people from their homes and wrecked several bridges. Along the Mississippi the floods did even more serious damage, breaking the levees and inundating the fields.

*Term expires January 1, 1904.

Italy.

Capital:
ROME.

The origin of the present reigning house is not historically established, but most genealogists trace it back to the German Count, Berthold, who settled on the western slope of the Alps in the eleventh century. By the end of that century the family had acquired the countries of Turin and Susa, and when, in 1381, Count Amadeus founded a law of primogeniture the family's position was so strong that it was soon able to secure control over the territory of Nice. The title of Duke was adopted by the Count of Savoy in 1416; in 1713 they obtained the island of Sicily, with the title of King, and, although they were subsequently compelled to exchange Sicily for Sardinia, they retained the royal dignity and added considerable territory to the Sardinian crown. In 1831 the direct male line died out with King Carlo Felice, and the throne reverted to Prince Carlo Alberto of Savoy-Carignano, a branch founded in 1596. In 1849 King Carlo Alberto abdicated in favor of his son, Prince Vittorio Emanuele. At the assembly of the first Italian Parliament, February, 1861, Victor Emmanuel II. was declared King of Italy, and by 1870 his domain included all the former Italian States.

The present ruler, Victor Emmanuel III., is the son of King Humbert, who was assassinated July 29, 1900. The King was born on November 11, 1869, and was married October 24, 1896, to Princess Helena (born January 8, 1873), daughter of Prince Nicolas of Montenegro. They have two children, both daughters, Princess Yolande and Princess Mafalda.

The Heir Apparent.—As the provisions of the Salic law prohibit the accession of females the heir apparent to the throne is Prince Emmanuel, Duke of Aosta, who was born January 13, 1869, and who married Princess Helene of Orleans, daughter of the late Comte de Paris, June 25, 1895. They have two children.

The Ministry. — The Ministry is constituted as follows: President of the Council and Minister of the Interior, Giuseppe Zanardelli; Minister of Foreign Affairs, Signor Morin; Minister of the Treasury, Signor di Broglio; Minister of Finance, Signor Paolo Carcano; Minister of Justice and of Ecclesiastical Affairs, Signor Cocco-Ortu; Minister of War, General Giuseppe Ottolenghi; Minister of Marine, Rear-Admiral C. Bettolo; Min-

ister of Commerce, Industry and Agriculture, Signor Guido Baccelli; Minister of Public Instruction, Signor Nasi: Minister of Public Works, Signor Balenzano; Minister of Posts and Telegraphs, Signor Galimberti.

The Nation.—Under the charter of 1848 Italy is a constitutional monarchy, with the entire executive power vesting in the King, and the legislative power jointly in him and the Parliament, which consists of two branches, the Senate, composed of princes of the blood and an unlimited number of members appointed for life by the King, and a lower house, composed of one Deputy elected for each 64,000 of the population, the present number being 508.

Officially the Roman Catholic Church is the State Church, but its power has been much curtailed and religious freedom and equality now prevail. Practically all the population, however, are members of the mother church, only about 100,000 being Jews and Protestants. The State is so strict in its regulation of public instruction that it requires that private as well as public schools shall be under its authorization. Primary education is compulsory between the ages of six and nine years.

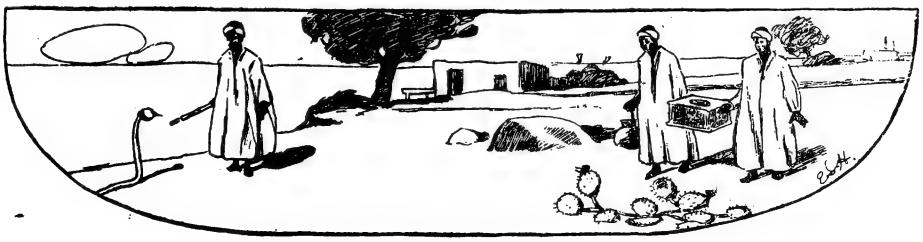
King of Italy.

Italy's latest financial statement is for the year ending June 30, 1903. At that time the revenues amounted to $365,133,700, while the expenditures for the same period were $362,472,700. At the same time the public debt amounted to $2,532,699,000. Commercially Italy is of considerable importance, the following being its trade statement for 1901: Imports, $346,049,430; exports, $278,165,370.

Italy's possessions include 670 miles on the coast of the Red Sea, from Cape Dumeirah to Cape Kasar. To this has been added Hamasen and the district north of it running to the coast and the province of Tigre. She also forms a protectorate over a large part of the Somali coast, extending inland about 180 miles, but these colonies are all of little importance.

THE ITALIAN POSSESSIONS.

Possessions.	Area Sq. M.	Population.	Revenue.	Expenditure.
Eritrea.....	88,500	450,000	$459,940	$1,863,100
Somaliland...	100,000	400,000	.....	.....
Totals....	188,500	850,000		



Events in 1903.—The annual financial statement was submitted to Parliament January 1, showing the budget surplus for 1901-1902 to be 23,899,408 lire, while the surplus of 1903-1904 will be 23,000,000. In the Chamber of Deputies, in February, opposition was shown to Austria, and many of the Deputies expressed themselves in readiness for a war if one seemed necessary. Anti-Austrian demonstrations took place in May. A proposal to reduce the strength of the navy, which was suggested to come simultaneously with that of the other great Powers, was opposed in the Chamber of Deputies on the ground that Italy's geographical position made a large navy imperative.

On April 16 the Minister of Foreign Affairs, Signor Prinetti, resigned, and was succeeded by Minister of Marine Morin, whose vacancy was filled by Rear-Admiral Bettolo. Minister Bettolo resigned on June 22 and Minister Morin took back the portfolio. At the same time Signor Giolitti resigned as Minister of Interior, and the Premier, Zanardelli, took the portfolio of the Interior Department. The United States was formally thanked by Italy for her action in settling the Venezuelan difficulty.

On April 7 a general strike was ordered in Rome, to take place the following day. Troops were ordered to be in readiness for any disturbance that might occur. On April 10 the strikers began to resume work, and the trouble was considered at an end.

Mount Vesuvius became active in March, and furnished an imposing spectacle. On July 23 the volcano became more active, and continued in violent eruption for nearly two months, causing but little damage, however, as the stream of lava took a direction away from the villages and vineyards. On February 10 a sharp earthquake shock was felt at Modica, near Syracuse, Sicily. Another earthquake occurred on May 22, in southern Italy, damaging a number of houses at Benevento and Salerno. Heavy wind storms caused much damage to shipping along the coast on September 12. On February 20 the Vallombrosa forest, mentioned by Milton in "Paradise Lost," was damaged by fire, which also burned the Villa Medici. The public loan office at Naples was burned on June 3, causing a loss of $2,200,000.

Italy was pleased at the visit paid by Emperor William of Germany in May, and by King Edward VII. of England later in the year. On March 27 an alleged plot to kill the Czar of Russia caused him to postpone the visit he intended to make to Italy. Rev. Dr. William Burt, head of the American missions among the Italians, was knighted by King Victor Emmanuel on March 21. The first stone of the new Campanile was laid at Venice on April 25. This structure will replace the historic edifice which collapsed July 14, 1902.

Japan.

—

Capital:
TOKIO.

It is the claim of the Japanese that their empire was founded in 660 B. C. by the first Emperor Jimmu and that his family still reigns. Some time during the twelfth century, however, there was a break in the dynasty, and the throne passed to other families, who continued to hold it until 1868, when the present sovereign, after a short war, overthrew the power of the Shogun. The sovereign bears the title of Kotei, or Emperor, although he is generally known throughout foreign countries as the Mikado, or "The Honorable Gate."

The present Mikado is Mutsuhito, who was born at Kyoto on November 3, 1852. He succeeded his father, Komei Tenno, February 13, 1867, and was married to Princess Haruko, the daughter of Prince Ichijo, on February 9, 1869. She was born May 28, 1850, and their issue has been:

Name.	Born.	Died.
Prince Yoshihito	1879	....
Prince Hirohito	1901	....
Prince Yasuhito	1902	....
Princess Masako	1888	....
Princess Fusako	1890	....
Princess Nobuko	1891	....
Princess Toshiko	1896	....

Married.	Born.	Date of Marriage.	Issue.
Princess Sadako	1884	1900	2

The Heir Apparent. — The Imperial House law, which was passed February 11, 1889, definitely fixes the succession to the throne upon the next male descendant of the sovereign. As the result, Prince Yoshihito, the only son of the Mikado, is the heir apparent. He was born August 31, 1879, and was proclaimed Kotaishi, or Crown Prince, November 3, 1889. On May 10, 1900, he was married to Princess Sadako, the daughter of Prince Kujo. They have had two children.

The Ministry.—The Ministry, or Cabinet, is now constituted as follows: President, Count Katsura Taro; Minister of Foreign Affairs, Baron Komura Jutaro; Minister of Finance, Baron Sone Arasuke; Minister of the Interior, Baron Utsumi Tadakatsu; Minister of Justice, Baron Kiyura Keigo; Minister of War, Lieutenant-General Terauchi Ki; Minister of the Navy, Admiral Baron Yamamoto; Minister of Public Instruction, Baron Kikuchi Dairoku; Minister of Agriculture and Commerce, Baron Hirata Tosuke; Minister of Communications, Viscount Yoshikawa Akimasa.

The Nation.—The Empire of Japan consists of the Archipelago of Niphon, which includes the four large islands of Honshiu, Kiushiu, Shikoku and Hokkaido, together with Formosa and the Pescadores, ceded by China in 1895, and nearly 4,000 smaller islands.

Although Japan is regarded as one of the absolute monarchies of the world, it possesses a constitution which was adopted in 1889. It provides that the Emperor shall be the head of the Empire, with all the rights of the sovereign and exercising full executive power, with the advice and assistance of the Cabinet Ministers, who are appointed by himself. There is also a Privy Council and a House of Diet, consisting of two branches, a House of Peers, which is composed of members of the imperial family, counts, viscounts and barons, and an indefinite number of persons appointed by the Emperor for meritorious service to the State or for erudition, and persons elected by each Fu and Ken. The total membership of the House of Peers is about 300. According to the Constitution the membership of the House of Representatives shall be 369, a fixed number being returned from each electoral district. Voting is by secret ballot and the proportion of members to the population is one to each 123,000.

Under the Constitution absolute freedom of religious belief and practice is assured so long as it does not interfere with general peace and order. There is no State religion, but the mass of the people follow one of the eleven sects of Shintoism, or one of the sixteen sects and twenty-five creeds of Buddhism. Elementary education is compulsory, and in 1900 there were nearly 30,000 elementary schools and many other institutions for higher, technical or special education. The two universities are the Tokio Imperial University and the Kyoto Imperial University. These include schools of law, medicine, literature, science, agriculture and engineering.

As Parliament was dissolved before the budget estimates for 1903-04 were passed the budget act for 1902-03 continues in operation. This places the receipts at $136,815,418 and the expenditures at $135,212,248. On March 31, 1900, the public debt amounted to $254,232,098.

According to the last official report the taxed lands owned by private persons and local corporations amounted to about 33,545,710 acres, of which nearly half was under cultivation. The principal agricultural products of the country are rice, wheat, barley, rye, tea, sugar and silk. Silk, cotton and other textiles are manufactured quite extensively, although trade conditions have not been of the best during the past two or three years. The camphor industry of Formosa is now a Government monopoly and is carried on by a British company under contract with the Government. In 1901 the exports of the country amounted to $137,403,248, and the imports to $147,522,272.

Emperor of Japan.

Events in 1903. — The year opened with Japan in a prosperous condition. A rice famine in the northeast provinces was the only economic cloud on the otherwise clear horizon. On January 1 the reserve in the Central Bank, at Tokio, was 107,000,000 yen, being 36,000,000 yen greater than at the same period of the year before. The general elections took place in March, and the Opposition side of the House of Representatives received 275 members. The election came in the midst of a threatened parliamentary crisis, and the excitement attending the voting was greater than had hitherto been known. In April a split occurred in the ranks of Marquis Ito's party, but it was patched up before it caused a general disruption of the Ministry. The agitation was not directed against Marquis Ito, but was due to the impatience of the leaders over the tolerant attitude toward the Cabinet.

It was reported that an issue of 6,000,000 yen in bonds was to be floated annually for the purpose of naval increase, and that retrenchments in other directions would be made to supply the deficit caused by the building of more war ships. There was a policy of economy shown in the Parliament toward other appropriations. On July 5 it was reported that the Premier, Field Marshal Viscount Taro Katsura, had resigned, owing to the difficulty in coping with the financial problems of the budget for the next year. Both houses of Parliament passed a bill extending the Formosan camphor monopoly to the whole empire.

Russia, in Manchuria, caused uneasiness in Japan. On April 23 three Japanese war ships were ordered to Niu-Chwang to be ready to protect her rights if assailed, or to act in concert with the Powers if a step more vigorous than protest were planned against

Russia. It was rumored in the Fall that Japan and Russia were on the verge of war, but Japan disclaimed any special disagreement with the latter country.

Japan seemed to show a strong inclination toward Korea during the year, and in May made a ruling that every mail steamship sailing to Korea should carry 150 male and 75 female Japanese colonists.

A volcanic eruption in the Loochoo group of islands caused a panic among the natives in May, and the provisional government applied to the central authorities for aid.

Jews in 1903.

(5663)

—

THE ATROCITY OF KISHINEFF.

RABBI
MAXMILLIAN HELLER,
B. L., M. A.*

As 1881 was made memorable in Jewish annals by the Elizavetgrad pogrom, 1891 by the Moscow oblava, that midnight raid upon the unsuspecting, so 1903 will be known as the year of Kishineff. In the intervening years Germany, Austria, France, Algeria, Roumania have, each in turn, held the centre of the Jewish stage by some fitful outburst of prejudice or hatred; Russia, the great anachronism, stepfatherland of one-half of the world's Jews, has easily distanced, in these three successive times, all the accumulated horrors of every other paroxysm.

At the opening of 5663 Jewish pulpits resounded with exultation over Secretary Hay's note to Roumania. There was, at once, a feeling of uncertainty as to the probable effects of that bold act of intercession, even some criticism of the statements and implications put forward. Hardly any one expected united action on the part of the Powers appealed to. Whatever hope of ultimate benefit there was rested upon the moral weight of the measure and upon the financial exigencies of the turbulent Danubian kingdom. Efforts were made, in the course of the year, to bring the matter to a head; England addressed a note to Germany, proposing action; Dr. Bernstein appealed in the German Reichstag, Count d'Aunay in the French Senate, for some condemnation of Roumania's breach of agreement. Neither appeal met with any response, while an interpellation in the Austrian Reichsrath received a sympathetic reply from Minister Korber, who had, however, to avow his helplessness in the premises. A previous petition of the Alliance Israelite Universelle, addressed to the French and Italian Governments, had been equally ineffective.

There seems to be little, if any, change in the desperate situation of the Roumanian Jews. The awful misery which prevails in the Jewish quarters of Bucharest surpasses, according to the testimony of Roumanian journalists, the worst scenes that can be witnessed in the slums of Paris or London. A ray of hope sprang up suddenly in consequence of a sensational cable despatch, which announced that the Roumanian Senate had concluded to grant naturalization to the Jews. The fact proved to be that one Jew had been given the coveted privilege. The only effect of Minister Korber's words was to incense Roumanian politicians against the unpatriotic aliens, who, they maintained, were making war abroad upon the country which harbored them. The massacre in adjacent Kishineff only whetted the appetite of Roumanian anti-Semitism for similar high carnivals. The situation is one of unrelieved gloom, with little prospect of abatement in the near future.

One turns naturally from Roumania, which sprang, in 1902, into sudden notoriety, to that hotbed of Jewish misery which presents the centre of gravity for the most serious of Jewish problems. That Russia is the land of whims and contradiction we can realize when we remember that Kishineff was ushered in, in the very month preceding it, by the famous sphinx-ukase which was labelled the Czar's edict of toleration. The liberties of Finland were expiring under the heel of military rule, and there was considerable skepticism in the glad welcome with which the promise of religious toleration under a Holy Synod was greeted. That the Jews had no reason to hope for any betterment became apparent soon enough; yet no one could have anticipated the spasm of fury by which Russia was to exhibit to the world how far she is as yet from any actual reign of tolerance.

We can see now that the Kishineff atrocity was not an unpremeditated outburst; the air was laden with storm, and there were those who busied themselves with accumulating the fuel for a conflagration. When the boy Ribalenko was found murdered in Dubossary the Jews of Kishineff understood their danger; but their deputations to the capital met with evasive, soothing replies, their appeal to the Metropolitan was answered with an open avowal of his belief in ritual murder. Whether Von Plehve sent the famous note to the Governor forbidding a vigorous suppression of anti-Jewish riots, or whether the dispatch emanated from some journalistic brain, it is certain that the infamous Krushevan was afforded every facility to inflame the populace. Leaflets were distributed on the eve of the massacre calling upon the people to rise; protection was asked by the Jews at the hands of the civil and military authorities, who pretended to see no danger. The mounting horrors upon horrors of those three days (April 19-21), which will leave a lasting stain upon the history of the Russian people, we must pass over; suffice it to remember that within the present generation no instance can be recalled in which the press reports teemed with such shocking details, or when the united voice of civilization rang out with a protest of such intense horror.

The news filtered very slowly through the usual channels; the Russian Government seemed to stand aghast at its own harvest and to make awkward efforts at minimizing the upheaval. Its official mouthpieces stammered, contradicted themselves and one another, brought forward explanations, indictments, apologies which had every appearance of untruthfulness and insincerity. By their own official admissions 45 Jews had been killed, 74 severely and some 300 less seriously wounded; it is attested by trustworthy witnesses that members of the upper class led organized bands of rioters, that the bishop passed, unprotesting, through the crowd, that police and military, with some few honorable exceptions, aided and abetted the rioters in their murderous excesses.

Meanwhile, the storm-tide of indignation and pity had been steadily rising. The New York American, with commendable enterprise, had sent the great Irish patriot, Michael Davitt, to the scene of the disaster. He brought back graphic accounts of the extent of the massacre, disproving the charge of Russian officials that a Jew had provoked the riot and that Jewish assailants had caused it to be renewed the second day. While money was being collected and indignation meetings were being held all over the world, the Russian Government vented its impotent anger upon the St. Petersburg correspondent of the London Times, who was summarily expelled.

The drama of Kishineff closes with the usual Russian contradiction; in Kishineff itself an apparently vigorous prosecution of the rioters has been set on foot; meanwhile a spirit of petty retaliation appears in the recent restriction upon the issuing of Russian passports in this country. Of an international Jewish conference in Berlin, called to consider the needs of Kishineff, only meagre reports have become public, according to which wholesale emigration was thought inadvisable. On the other hand our immigration for June does not show any perceptible increase as an effect of the great massacre.

In the religious life of Anglo-Judaism 5663 records a number of important advances. The Jewish Religious Union completed its critical first year amid signs of health and progress; it had weathered furious attacks in the Jewish press, the condemnation of the Chief Rabbi, excited debates of the United Synagogue, the withdrawal of some of its own founders; it had declined the invitation of the Reform Synagogue (Professor Marks's congregation, Berkeley street, London, England) to worship, under certain restrictions, in its building; it had consistently adhered to its first purpose of creating forms and facilities of worship which might bring back to allegiance those who had been estranged by the antiquated methods of the English Synagogue.

Another token of awakening earnestness presents itself in the flourishing condition and the useful work of the Jewish literary societies, in the conference of their union, and in the publication of their valuable annual. The election, as president of this union, of so eminent a literary man as Israel Gol-

*The American Jewish Year Book of the Jewish Publication Society of America.

lancz, secretary of the British Academy, speaks well for the active participation of the highest Anglo-Jewish culture in distinctly Jewish work. The Union of Jewish Literary Societies inaugurated at Ramsgate a Summer meeting somewhat in emulation of our own Jewish Chautauqua, whose chancellor, Rev. Dr. Henry Berkowitz, brought greetings from the elder society. We have thus another link added to the chain of parallel work, in publication, historical investigation, woman's organization, which is bringing English and American Judaism into ever closer friendship and co-operation.

Perhaps in no previous year has the welfare and progress of our seminaries dominated the interest of the Jewish public to an equal degree. In the Hebrew Union College the increasing feebleness of the temporary president, Professor Dr. M. Mielziner, rendered the difficult problem of selecting a permanent successor to Dr. Wise the more acute; it was solved by the unanimous election of Rev. Dr. Kaufmann Kohler about the very time of Dr. Mielziner's demise. The eulogy of cordial esteem which followed the cortege of the gentle scholar coincided with the chorus of approval which greeted the appointment of the learned radical.

That problems of Jewish scholarship and religious education should engage so much of our attention and liberality is a cheering proof of intellectual advancement, while the serious perplexities created by the tidal wave of immigration are still clamoring for our utmost exertions. More perhaps than ever before have the eyes of the country been centred upon the New York community and its gigantic struggle with the evils of Ghetto cramping. Here the B'nai B'rith and the removal committee have done yeoman's work, assisted by the more or less active sympathy of lodges and communities all over the country. It is a work of incalculable difficulty, which will be systematized only after long experience. Meanwhile, under the process of Americanization and with closer mutual acquaintance, East Side and West Side are drawing ever nearer to appreciation of and co-operation with each other. The East Side is emboldened to criticise the methods by which it is to be elevated, and yet recognizes its duty of helping in the work. The West Side is entering more sympathetically into the individuality of the recent immigrant; it seeks to understand him from his point of view; it accords him a measure of recognition in his independent char-

Michael Davitt, the New York American's Commissioner, Investigating Kishineff Atrocities.

ities. Worthy pride is cultivated in the immigrant by such united action as was taken in honor of Baron de Gunzburg, by the prompt and active collection for the relief of Kishineff. That a Yiddish actor, like J. P. Adler, should have been thought worthy of starring on the American stage cannot but encourage his brothers of Russian parentage in a legitimate consciousness of their worth and possibilities.

One great aspect of the whole vast immigration problem is thus nearing solution; the bringing together, under the auspices of American culture, of the diverse elements that make up American Jewdom. With what unexpected dangers this problem is fraught becomes startlingly clear in the imperative need which has arisen in New York (as it did in London) for a Jewish protectory. However indifferent we might be to other distinctions in which the

Jew once gloried, we cannot afford, without a determined effort, to allow to pass from us the splendid record for the lowest rate of criminality which has so long been the Jew's rightful boast among all nationalities. It is a most cheering sign that an American of the younger generation, Mr. Louis Marshall, should have indicated (at the Chautauqua Summer Assembly) the way toward redemption; that there is need of religious education for the children of the immigrant, to steady the unformed character against the dangerous shock of a radical revolution in environment.

The problem of religious education seemed to push to the forefront in the public discussions of the year. Woman's Council, Sabbath-school Union, Zionists, Rabbinical Conference, Chautauqua, all vied with one another in earnest deliberation on methods and aims of religious teaching. That there is a full realization of the imperfections of our present Sabbath-school there can be no manner of doubt. Whether reports, debates and papers will bring about the necessary yielding of unbridled individualism, a practical uniting of forces, remains to be seen.

The call for an American Jewish Congress which was proposed at the Triennial Convention of the Council of Jewish Women of Baltimore, which was favored by the Council of the Union of American Hebrew Congregations at St. Louis, was finally rejected as untimely by the Executive Board of that union after a number of important bodies had signified their willingness to attend such a congress. A conference of Southern rabbis met and organized in Vicksburg, Miss., with an attendance of seventeen rabbis.

At the convention of the Central Conference of American Rabbis in Detroit the formation of an American Synod was championed from several quarters. A far-reaching measure in the direction of organization was the appropriation, by the Executive Board of the Union of American Hebrew Congregations, of the sum of $5,000 for circuit work among country communities, Rabbi George Zepin, of Kalamazoo, Mich., being appointed circuit director. Further symptoms of an earnest spirit of co-operation were exhibited in a movement to enlist young men for congregational participation which appealed to the congregational union for guidance, also in a noteworthy prevalence of solemn union thanksgiving services in various parts of the country. The Sabbath discussion of the Central Conference culminated in strong resolutions for the maintenance of the historic Sabbath.

The Zionist Convention.*—At the Sixth Zionist Convention at Basel in August the president, Dr. Theodore Heizl, presented an offer by the British Government of a tract of land in British East Africa for the use of Jewish colonists. The territory consists of 280,000 square miles, and Bombosa, its excellent seaport, has good railway connections with the interior. This proposal aroused great discussion, as it was held by many that to colonize East Africa would be to abandon the real purpose of Zionism—the establishment of a Jewish state in Palestine. Men like Max Nordau and Israel Zangwill, however, held that such a colony would not interfere with the Palestinian nation, and the conference voted, 227 to 127, to appoint a committee to visit the territory offered by Great Britain and to report upon the merit of the proposition. It is believed, therefore, that if such a report is favorable the funds required will be provided without the necessity of touching the $2,500,000 which has already been gained by the sale of stock for the original purpose of the Zionist movement. At present the territory is occupied largely by negroes.

*The Editor.

JEWS IN THE UNITED STATES.

Dr. Cyrus Adler, editor of the American Jewish Year Book, estimates the number of Jews in the United States as 1,127,268. During the past century several attempts have been made to obtain an approximately correct census of the Jewish population of the country, and these estimates, extending from 1818, when Mordecai M. Noah determined that the number did not exceed 3,000, show that this portion of the American people has increased with phenomenal bounds. The population according to States is estimated as follows:

State.	Population.	State.	Population.
Alabama	7,000	Montana	2,500
Arizona	2,000	Nebraska	3,000
Arkansas	3,085	Nevada	300
California	28,000	New Hampshire	1,000
Colorado	5,800	New Jersey	25,000
Connecticut	5,500	New York	500,000
N. and S. Dakota.	3,500	North Carolina	6,000
Delaware	928	Ohio	50,000
Dist. of Columbia	3,500	Oklahoma	1,000
Florida	3,000	Oregon	5,500
Georgia	6,135	Pennsylvania	95,000
Hawaiian Islands.	20	Philippine Islands	100
Idaho	300	Porto Rico	100
Illinois	75,000	Rhode Island	3,500
Indiana	25,000	South Carolina	2,500
Iowa	5,000	Tennessee	10,000
Kansas	3,000	Texas	15,000
Kentucky	12,000	Utah	5,000
Louisiana	12,000	Vermont	700
Maine	5,000	Virginia	15,000
Maryland	26,500	Washington	2,800
Massachusetts	60,000	West Virginia	1,500
Michigan	9,000	Wisconsin	15,000
Minnesota	10,000	Wyoming	1,000
Mississippi	3,000		
Missouri	50,000	Total	1,127,268

Kansas.

Capital:
TOPEKA.

Kansas has an area of 82,080 square miles, and by the census of 1900 had a population of 1,470,495. Kansas became a part of the United States by the Louisiana Purchase of 1803. Its early history was largely identical with that of its sister States. By an act of Congress in 1854 the Territories of Kansas and Nebraska were organized, and it was declared that all the laws of the United States except the Missouri Compromise should be effective in them. By the Missouri Compromise bill of 1820 it was provided that in all the territory of Louisiana north of latitude 30 degrees and 30 minutes, except that included in Missouri, slavery should not exist. About this time a large immigration from free and slave States began to people the Territory. At a public meeting held July 29, 1854, resolutions were passed offering to assist in removing from the Territory those who entered under the auspices of Northern aid societies. On August 12 another meeting was held, and resolutions favoring slavery were passed. At the election for Legislative delegates which followed it was found that many of the votes had been cast fraudulently by men from Missouri. Another election for delegates was held in March, 1855, and again the polls were taken possession of by men from Missouri, who again elected pro-slavery delegates. The fraudulent ballots were cast out and the anti-slavery delegates declared elected. Shortly afterward the Governor, Andrew H. Reeder, was deposed and the pro-slavery delegates given seats in the Legislature. This was the beginning of a series of disturbances which lasted until the Civil War and gave to the Territory the name of "Bleeding Kansas."

Gov. W. J. Bailey.

In 1859 a constitution rejecting slavery was finally adopted, and officers were elected under it. On January 29, 1861, Kansas was admitted to the Union under this constitution. During the Civil War the State was the scene of irregular warfare known as "jayhawking," carried on by Confederate raiders from Missouri and Arkansas and the Unionists who opposed them. The only battle of prominence took place at Lawrence on August 21, 1863.

Agriculture and stock raising are the principal industries of the State, though manufacturing and mechanical industries have increased largely in the past few years. Kansas City is the second largest meat-packing centre in the United States. Soap and candles are manufactured extensively, and factory manufacture of butter, cheese and condensed milk are attendant industries.

Events in 1903. — Chester L. Long was elected United States Senator on January 27, to succeed William A. Harris. Mr. Long is a Republican and Mr. Harris a Democrat. A bill to require foreign insurance companies to invest 20 per cent of their Kansas premiums in Kansas securities was killed in the Legislature in February. On January 29 a bill was introduced to amend the State election laws so as to exclude all negroes from voting.

Another radical bill introduced made homicide justifiable when committed by a person in defense of the reputation or character of any member of his or her family. A special session of the Legislature was called in June to provide relief from the distress caused by the floods in May. City elections were held throughout the State on April 7. The Republicans were generally victorious. In Atchison party lines were thrown down and a citizens' ticket was elected. Only six towns of any importance in the State voted in favor of a liberal policy toward the saloons.

The wheat crop for 1903 was the largest in the history of the State. It was estimated in May that it would amount to 90,000,000 bushels, exceeding by 21,000,000 bushels the yield of any other year in the State's history. The floods in the latter part of May cut down the yield somewhat, but did not prevent the record being surpassed.

A tornado struck Altamont, Kan., on April 9, killing several persons and damaging much property. Galena and Oswego also suffered. A fatal tornado passed over Riley County on May 23, causing several deaths at Bala, on the Rock Island Railroad. Floods in the Kansas River in May and June caused unprecedented conditions in all the towns situated along that stream. The high water became dangerous on May 28, and by the following day North Topeka was inundated and a dozen towns along the river were under water. On the 30th fire broke out in Topeka, adding to the flood horror. More than fifty deaths were reported from Topeka, and the property loss in that city and the other stricken towns amounted to several million dollars. Aid was rushed from all parts of the United States, and a special session of the Legislature was called to afford relief. The river began to fall on June 2, and by June 4 the danger was passed. On August 2 another disastrous flood damaged the wheat fields near Salina, but no lives were lost.

Kentucky.

Capital:
FRANKFORT.

Kentucky has an area of 40,400 square miles, and by the census of 1900 had a population of 2,147,174. Kentucky was first explored in 1767 by John Finley and a few companions from North Carolina. In 1770 the country along the Cumberland and Green rivers was explored by a party from southwestern Virginia. In 1773-4 the Kentucky River was surveyed as far as the Dix River. In 1774 James Harrod built a log cabin on the present site of Harrodsburg and the next year established a station there. In 1775 Daniel Boone built the fort at Boonesborough, and in the same year he concluded a treaty with the Cherokees whereby Kentucky was sold to Colonel Richard Henderson and his company. In 1776 Kentucky was made a county of Virginia, and in 1777 the first court was held at Harrodsburg. In 1779 there began a great influx of population, and in 1783 Kentucky was formed into one district and a district court established.

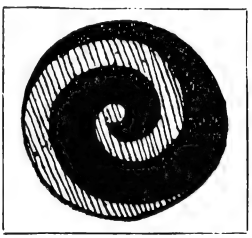
At conventions held in 1784-5 a peaceable and constitutional separation from Virginia was recommended, and in 1786 an act was passed by the Legislature agreeing to the recommendations. The separation was not completed, chiefly because of a desire on the part of the people to form an independent nation. In 1790, however, Kentucky became a separate territory, and on June 1, 1792, was admitted to the Union as a State. Kentucky took an active part in the War of 1812 and furnished many volunteers. At the beginning of the Civil War the State assumed a neutral position and determined to resist invasion by either Confederates or Federals. In February, 1861, the Legislature refused to call a convention to consider the Ordinance of Secession. By the election held in May and June, 1861, it was

shown that a majority of the people in the State favored the Union. During the war the State was disturbed by raids from both sides, and in 1864 martial law was declared. Civil authority was restored in October, 1865. After the close of the war the Legislature refused several times to ratify the Fifteenth Amendment to the Constitution.

The manufactures of Kentucky depend upon her natural resources and the facilities afforded by the Ohio and Mississippi rivers. Tobacco, corn and wheat fields, hardwood forests, coal and iron mines and abundant water power offer unusual opportunities for manufacturing. Tobacco is the principal product, and Louisville is the largest leaf tobacco market in the world.

Events in 1903.—Among the important acts passed by the last session of the Kentucky Legislature were the following: An act repealing the "double liability" clause of the corporation law, except as to stockholders in insurance, guaranty investment and trust companies and banks; an act placing interurban railways on the same footing as regular railroads; an act prohibiting the employment of children under fourteen years of age in factories, mills, mines and workshops, except by consent of the parents and the County Judge; an act authorizing railroad companies to purchase or take stock in other railroads, provided they are not competing lines; an act providing for a State Labor Inspector; an act repealing that part of the "mob law act" which authorized the appointment of guards at the expense of the county to protect property against strikers, mobs, etc.; an act to protect birds, their nests and eggs; an act making abduction for ransom a felony; an act requiring owners and operators of mines to pay miners in lawful money instead of script or orders for merchandise; an act requiring non-residents to take out licenses to hunt within the State; an act providing that all life insurance companies must issue paid up policies, in proportion to payments, after three or more years' premiums have been paid, if the insured fails to pay further premiums.

Gov. J. C. W. Beckham.



The Democratic State primaries were held May 3, and Governor Beckham was renominated by an overwhelming majority. The Republican State convention was held June 16 at Louisville. A resolution commending President Roosevelt and asking for his nomination as President was offered and accepted, though not without a fight. Kentucky was allowed by Congress $1,323,999.35 for equipping Union soldiers during the Civil War. This claim had been standing against the Government for years, and was settled through the efforts of Captain C. C. Calhoun, a young lawyer of Lexington. J. B. Marcum, a prominent man in Breathitt County, was killed on May 4. Attempts to find and arrest the assassins met with opposition from the people of the county, but finally Curtis Jett and Thomas White were caught, charged with the crime, and indicted. The attempt to try them resulted in a reign of terror. On August 15 Jett and White were sentenced to life imprisonment. An appeal was taken and the case reheard in September. At this trial Jett was sentenced to death for the murder of James Cockrill, which occurred some time before the killing of Marcum. No trial had been previously held for this murder.

Korea.

—

Capital:
SEOUL.

Heui Yi, the present Emperor of Korea, is generally reckoned to be the thirtieth in succession since the founding of the dynasty, in 1392, but, as a matter of fact, four of the so-called kings were crown princes who never ascended the throne. The reigning monarch succeeded his predecessor, now known by his posthumous title of Ch'yelchyong, in 1864, and, while all previous rulers of this country have been titled as kings, Heui Yi, in 1897, assumed that of emperor.

Until 1894, when Japan declared war against China, Korea was practically an absolute monarchy, in which the Constitution and Penal Code, as well as the system of official administration, were largely based upon the Chinese model. As Korea had acknowledged the suzerainty of China for hundreds of years, and as the denial of such suzerainty was one of the alleged causes of the Japanese-Chinese war of 1894, the treaty of Shimonoseki, May, 1895, gave Korea an opportunity to reform its exclusive and corrupt administration. In performing this work the country was not only governed by Japanese influence, but was assisted with Japanese money, and as the result the payment of taxes has since been made in money instead of in kind, the salaries of Government officials have been fixed at a stipulated figure, many unnecessary officials have been discharged, and other reforms have been instituted which have had a good effect upon the general Government. In spite of this, however, there is a strong reactionary tendency throughout the empire, and little effort has been made to check the abuses that have recently been revived. According to the present Constitution, the Emperor is a hereditary and independent sovereign, and, while his power is somewhat modified by the existence of a Cabinet which passes resolutions and frames laws, these must be submitted to the ruler for his approval before they can become effective. As the privileges of the aristocracy have been abolished, the selection of the officials for Government posts are now made by the Ministry, but each must meet with the approval of the Emperor.

Emperor of Korea.

Heui Yi was born on September 8, 1852, and was married to a daughter of the noble family of Min in 1866. She died on October 8, 1895.

The Heir Apparent.—The heir apparent to the throne is Tchok Yi, who was born on March 25, 1874.

The Ministry.—The present Ministry of Korea is constituted as follows: Minister of Foreign Affairs, Yong Ha Cho; Minister of the Interior, Kon Ha Yi; Minister of Finance and of the Police, Yong Ik Yi; Minister of Justice and War, Keui Son Shin; Minister of Instruction, Yong So Min; Minister of Agriculture, Trade and Public Industry, Chong Muk Min; Minister of the Royal Household, Tiong Ku Yun.

The Nation. — Korea was formerly divided into eight provinces, but these divisions have now been abolished, and local government is administered in the thirteen to, or provinces, which are also subdivided into 339 kun, or districts. There is a separate government for the capital, and each of the nine treaty ports is under the control of a kamni, or superintendent, who holds a rank equal to that of a consul. Aside from the worship of ancestors, which largely

prevails throughout Korea, religion is not held in great esteem by the people. The upper classes are chiefly followers of Confucianism. Comparatively little attention is paid to education, although there are schools, especially in Seoul, in which all languages are taught.

Korea is an agricultural country, but the most primitive methods are in use. Rice, beans and ginseng are the principal agricultural exports. There are minerals in the country, and gold, copper, iron and coal have been exported. An American company is now engaged in working a gold mine at Won Sen, under a concession granted in 1895. The total value of trade at the open ports in 1901 was: Imports, $7,500,000; exports, $4,350,000.

Korea's estimated revenue for 1902 was $3,793,275; the expenditures were estimated at $3,792,988.

Events in 1903.—Russia made an application to the Korean Government in January for a railroad concession from Seoul to Wiju, which was refused by Korea. Russia attempted to establish a settlement near Wiju, in order to hold a timber concession granted in 1896. It was reported that many Russian soldiers were entering the territory, disguised as surveyors, and a protest was made by Korea, who insisted that the Russians retire. It was generally thought that the aggression on the part of the latter country was evidence of a design against Korea similar to that against Manchuria. Japan joined Korea in the protest, and for a time war seemed verging between Japan and Russia. Japan also showed a tendency to find foothold in the country, demanding the same rights there that Russia enjoyed in Manchuria.

Labor.

THE MOVEMENT FOR INDUSTRIAL PEACE.

HON. OSCAR S. STRAUS, LL. D., Pres. American Social Science Asso.

My connection with the organization and working of the Industrial Department of the Civic Federation perhaps entitles me, to that extent, to speak from the standpoint of some experience. This department was organized at a general conference held in the city of New York on December 16 and 17, 1901, and on December 8-10, 1902, the second annual conference was held, which in its general nature was like the first, except that it showed evidences of a more conciliatory spirit and better understanding. The results accomplished by this body have not only fully justified its existence, but have also clearly shown that along the lines of its endeavors the best results toward adjusting labor disputes and securing industrial peace are attainable. The Conciliation Committee has been applied to for its good offices within the past fifteen months in many important and large labor controversies. These applications have come sometimes from the one side, sometimes from the other side, and not infrequently from both sides. The committee has succeeded beyond its most sanguine expectations in bringing about or materially contributing toward an adjustment in nearly every instance, with the exception of the anthracite coal strike. Its efforts to avert that lamentable and bitter struggle, after bringing about two conferences between the operators and the representatives of the miners, failed largely, if not entirely, because of long-standing enmities growing out of wrongs and arbitrary exactions on both sides far antedating the conferences, coupled with a determined stand on the part of the operators to make no concessions whatever.

Oscar S. Straus, LL. D.

The plan of organization of the Industrial Department of the Civic Federation has been unfavorably criticised for not giving unorganized labor a representation, and as a consequence unduly leaning toward, if not actively supporting, organized as against unorganized labor. This point of view did not escape the careful attention of the Executive Committee of the Federation, and for that reason its "Statement of Purpose" contains the following: "That at all times representatives of employers and workers, organized and unorganized, should confer for the adjustment of differences or disputes," etc. Besides, these considerations presented themselves: That the third group, "on the part of the public," could certainly be relied upon to represent all the laboring elements irrespectively, just as they represented the welfare of the entire community. In what other way could it select representatives? For, had the Civic Federation summoned unorganized labor to have a conference and select delegates or representatives for its committee, then it could have been charged that by that very act it had promoted the organization of unorganized labor.

The conflict between employers and workmen—commonly expressed, between capital and labor—has never been more concisely, graphically and fundamentally described than when Roger Williams said: "What are all these strifes and contentions about for but larger dishes and bowls of porridge?" This very contention, which is the source of unrest, is at the same time one of the chief factors of material advancement and progress. The highest consideration should not be how to deaden that strife and contention, but how to co-ordinate and regulate it, so as not to break the bowls and spill the porridge. To the extent that labor organizes for self-protection, for the purpose of bettering its condition and raising the standard of life, it is not only justified, but becomes a contributor to the advance of civilization; but when labor organizes in a spirit of bitterness and hostility against employers and uses its power to tyrannize over the directing forces of industry and the capital necessary to give it life, to that extent it defeats its own interests, hinders industrial progress and becomes a menace to social order.

The greatest obstacle to industrial peace is not selfishness, but the tyranny of ignorance and uneconomic demands. But, with the reasonable lessening of the hours of labor and the widening opportunities for education, the laboring class is certainly making great intellectual progress; and many of its leaders are men of wise experience, of education and of ability, with an enlightened sense of their duties as patriotic, peace-loving citizens.

In the past fifteen months, as a member of the Conciliation Committee of the National Civic Federation, I have had frequent conferences with many of the leading labor leaders in the country, and I am free to state my point of view has undergone a complete change in respect to the evolution of the labor question. I have grown more and more hopeful that as this country was the first to organize religious and political equality it will lead the way to a peaceful co-ordination of the economic forces by equalizing the opportunities for advancement, which is the nearest practical approach to economic equality. The same inherent reasons and causes which render it impossible to maintain a condition of economic equality between different classes of employers obtain as between workers and employers. We can never by artificial or by arbitrary laws equalize the individual capabilities to achieve success—certainly not this side of the grave; and beyond that point, however vivid may be our hopes, our experiences are entirely lacking. Economic stagnation is not economic equality. They have the same relations to each other as life and death. Success in every sphere of life—in the professions, in the workshop, as well as among the captains of industry—is attained by inborn qualities, plus that margin of energy, industry and ability which the one man puts into his work above the average man, and every effort to curb those qualities by imposing artificial and arbitrary restraints is to level downward; and so far as it concerns workmen, it would be equivalent to decreeing once a workman always a workman, and to deprive him of the very opportunities to attain economic equality. It would effectually shut the doors against his advancement, those doors which in this country have always readily swung open for all, without distinction of class, race or religion, who have the energy, industry and ability to deserve admission. The maintenance of the open door of opportunity is a fundamental American doctrine, as old as the Declaration of Independence. In this country especially the democratic spirit is engrafted in the hearts of the people; the popular sympathies are on the side of every legitimate effort of the many to better their conditions so long as they do not in their struggle trample upon unalienable rights of the individual, "life, liberty and the pursuit of happiness."

Yet I have no panacea to offer as a solvent for the relation of capital and labor. The pessimists see but one end: the life and death struggle of classes—such a revolution as devastated the streets of Paris in 1848.

The student of those troublesome times well knows that that revolution settled nothing, but caused widespread misery and poverty. The solution lies along the lines of evolution, not revolution; and, in my judgment, that evolution will best be promoted, as the first step, by organization on the part of employers in their respective branches of industry. By this means they will be best able to cope with and restrain organized labor in resisting uneconomic demands and unreasonable exactions, and at the same time they will be best able to agree among themselves to accord such terms and conditions as to wages, hours and employment as tend to improve the standards of life and living among laboring men. Organization among employers will result in placing the adjustment of differences in the hands of experienced and capable men, who will be best qualified by ex-

perience and knowledge to treat such matters in a broad and liberal spirit, free from petty enmities and from competitive restraint. Without organization and with unrestrained competition, the well-disposed employer is often prevented from granting his workmen more liberal terms, which he regards as reasonable, so long as his less well-disposed competitor holds out against making like reasonable concessions; and, as a result, strikes on the part of organized labor are brought about to correct evils growing out of a lack of harmony among unorganized employers. Besides, strong organization among employers will have a far-reaching moral and disciplinary effect upon labor and make it easier for the leaders of labor to control their followers and restrain them from making unreasonable demands. The temptations of power which organization gives labor, when not restrained by organized power on the part of employers, is too great not to be misused and tyrannically exercised. Just as among nations one sword keeps the other in its scabbard and makes for peace, so will equality of might conduce to equality of right and strengthen the forces of wisdom and conservatism on both sides.

Labor.

—

STRIKES IN 1903.

JOHN N. BOGART,
Labor Editor
of the
New York Evening Journal.

In the world of labor during the year 1903 the storm centre was in New York city, shifting thither from the coal regions, the scene of the great strike of 1902. Among the many strikes which occurred during the year the most important was in connection with the building trades, and its effects were especially serious owing to the great extent of construction, exceeding even what might be regarded as a normal amount, now in progress in the metropolis. In point of fact the troubles between employed and employers in the building trades resulted in a series of strikes and a situation which has been marked by a variety of complications, including a contest between two rival organizations of one of the trades. The dissatisfaction in the ranks of labor has not been confined to New York city, nor did it originate there. Neither was it confined wholly to any one branch of the building trades, although one mainly affected is that composed of the structural iron and steel workers. The inception of the trouble was in Jersey City, N. J., where a foreman who was employed by the American Bridge Company refused to comply with the rules of the organization in New York city and Jersey City. A strike resulted, and then, on account of various other infractions of existing rules, strikes resulted locally in Buffalo, Pittsburg, Philadelphia and Albany. They all occurred on contracts undertaken by the American Bridge Company. About March 1 the offices of Frank Buchanan, international president of the Bridge and Structural Ironworkers, were sought, and he made an investigation which resulted in a general strike being ordered on March 16 of all the men of the organization employed on work being done by the American Bridge Company. This order called out about 5,000 men. Wherever it was learned that the company was furnishing material a strike of the structural ironworkers at that place was ordered. Among the men who went out under this order were those employed on the subway stations in New York city. The strike was indorsed by the building trades councils in almost every portion of the United States.

With this beginning the troubles in the building trades multiplied and became complicated in the city of New York, with the result that by midsummer there was a total cessation of building operations in the city and its vicinity, various trades being affected, and to such an extent that, as a single instance of the effects of the trouble, it was impossible at one period to secure the execution of such a simple job as the putting up of a few shelves. In all parts of Greater New York there could be seen edifices of all sorts, from the frame cottage to the most elaborately planned edifices of stone and steel, in varying conditions of incompleteness, with no signs of activity about them. Work was practically abandoned on many scores of buildings, and even the sale of lumber was suspended in some localities owing to inability to secure its delivery. The contest became intensified by the united resolve of master builders to resist to the uttermost the effort of the labor organizations to interfere with their conduct of their own business. The issue, which thus became sharply defined, was, on the side of the labor organizations, a demand that they should be recognized in all differences arising between employers and employed, and, on the side of the employers, a refusal to permit outsiders to interfere in such matters. During the progress of the strike differences arose in the labor ranks which afforded the master builders some advantage, and in many instances work was resumed upon contracts where it had been suspended; but the end of the building season did not witness either a victory for them or any sign of yielding on the part of the workingmen as a whole. Except in a few insignificant instances the strike was unattended by any approach to violence on the part of the strikers.

Another strike of large proportions is one which was inaugurated in Lowell, Mass., early in the Summer and continued throughout the season, seriously affecting the cotton milling industry of that city. It was practically a lockout, the mill owners anticipating the contemplated action of their employes by suspending operations in their mills. Several thousands of operatives were out of work throughout the Summer, with no definite prospect of the affected mills resuming.

Street railway strikes occurred in several places, the most serious because of the disorder attending it being in Waterbury, Conn., during February and March. There was much violence, and it manifested itself at every opportunity, the situation being considered so critical that State troops were ordered to the city in order to suppress the riotous spirit. Attacks upon cars were frequent, and the presence of the militia appeared to intensify the disposition for lawless action.

A strike of motormen and conductors of the Indiana Railway Company, at South Bend, Ind., in February, was also attended by some rioting, but the outbreaks were dealt with by the local authorities and quickly suppressed.

The most serious instances of lawlessness in connection with strikes during the year occurred in the mining region of West Virginia, where the miners went to such lengths in resisting the service of papers issued from a Federal court that a large posse was brought against them and a pitched battle between about 300 armed miners on the one side and a posse of 100 on the other took place near Stanaford City, Raleigh County. Four of the miners were killed and two were fatally wounded, while several on both sides received wounds.

Aside from these unfortunate and regrettable instances there was little lawlessness in any of the large number of strikes which occurred and most of which were only of local importance. In most of the cases the strikes were for increased pay or for shorter hours and were generally settled by a compromise. There were some indications of an extensive strike in the anthracite region of Pennsylvania in the Spring, but the troubles did not culminate.

One of the most important occurrences of the year in connection with labor troubles was the publication of the report made to the President of the United States by the commission appointed to deal with matters involved in the great coal strike of 1902. It was upon the appointment of this commission that the miners returned to work, they and the operators agreeing to submit their differences to such a commission. It consisted of George Gray, Carroll D. Wright, John M. Wilson, John L. Spalding, Edgar E. Clark, Thomas H. Watkins and Edward W. Parker. The four main questions at issue and the decisions concerning them are as follows:

The miners demanded an advance of 20 per cent in rates of pay for contract mine workers. An advance of 10 per cent was granted.

The miners demanded an eight-hour day for employes paid by the hour, day or week. A nine-hour day was granted to company men, and an eight-hour day to engineers, pumpmen and firemen.

The miners demanded pay by weight for coal mined. This was rejected.

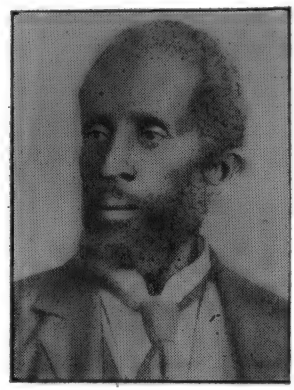
The miners demanded recognition of the United Mine Workers of America. This was rejected.

In connection with its decision upon the last of these four matters the commission had the following to say in regard to trades unions:

"The commission agrees that a plan under which

all questions of difference between the employer and his employes shall first be considered in conference between the employer or his official representative and a committee chosen by his employes from their own ranks is most likely to produce satisfactory results and harmonious relations, and at such conference the employes should have the right to call to their assistance such representatives or agents as they may choose and to have them recognized as such.

"In order to be entitled to such recognition the labor organization or union must give the same recognition to the rights of the employer and of others which it demands for itself and for its members. The worker has the right to quit or to strike in conjunction with his fellows when by so doing he does not violate a contract made by or for him. He has neither right nor license to destroy or to damage the property of the employer; neither has he any right or license to intimidate or to use violence against the man who chooses to exercise his right to work, nor to interfere with those who do not feel that the union offers the best method for adjusting grievances. The union must not undertake to assume or to interfere with the management of the business of the employer. It should strive to make membership in it so valuable as to attract all who are eligible but in its efforts to build itself up it must not lose sight of the fact that those who may think differently have certain rights guaranteed them by our free government. However irritating it may be to see a man enjoy benefits to the securing of which he refuses to contribute, either morally or physically or financially, the fact that he has a right to dispose of his personal services as he chooses cannot be ignored. The non-union man assumes the whole responsibility which results from his being such, but his right and privilege of being a non-union man are sanctioned in law and morals.



"It should be remembered that the trade union is a voluntary social organization, and, like any other organization, is subordinate to the laws of the land and cannot make rules or regulations in contravention thereof."

Liberia.

Capital:
MONROVIA.

Liberia, the negro republic on the western Guinea coast, in Africa, was organized by several colonization societies in 1822 in the belief that it would make permanent provision for freed slaves. From the day of its origin the number of colonists steadily increased, but it was not until July 26, 1847, that the new State was recognized as the Free and Independent Republic of Liberia. The Constitution is based upon that of the United States. The executive power vests in a President, a Vice-President and a Council of six members, while the legislative power is a Parliament, composed of two houses —the Senate, with nine members, and the House of Representatives, with thirteen members. Senators are elected for four years, but the president and members of the Lower House hold office for two years only. The constitution provides that electors must be landowners of negro blood, and the President is required to be at least thirty-five years of age, and the owner of real estate to the value of $600.

Effective government extends only a few miles inland. Away from the coast the country is wild and difficult of access. But little, if any, policing of this district is attempted, and no strong efforts have been made to reclaim it for cultivation. The forests abound in valuable trees, producing many of the exports of the country, and the collection of these forms the chief industry of the inhabitants of the outlying regions. Ivory is obtained in this section, though much of that which is exported is got by barter from the native tribes, with most of whom the Liberians have trade agreements of a friendly nature. The population is officially estimated at 2,000,000. Revenue is derived chiefly from customs. Its exports consist of palm oil, palm kernels, rubber, sugar, birds, coffee, cacao, arrowroot, ivory, ginger and piassava fibre. As in the case of the exports, definite statistics concerning its imports are difficult to obtain. It is known that they consist of cotton, provisions, dried fish, petroleum, iron work and hardware, and spirits and ales. According to the financial report for the year ending September 30, 1900, the revenues amounted to $218,840, while the expenditures, which embraced chiefly the cost of the administration, were a trifle less than $208,000. A debt of $500,000 was contracted by the Government in 1871, and this, with the unpaid interest, amounted to nearly $475,000 in June, 1901. The republic is also saddled with an internal debt, the arrears of interest for which exceed the principal. The President, who was elected in June, 1903, is Hon. Arthur Barclay. He is of pure negro stock and was born in Jamaica, his parents having emigrated to Liberia while he was still a child. He was educated at the College of Liberia and held several important political offices, including those of Postmaster-General and Secretary of the Treasury, prior to his election to the Presidency of the republic.

President Barclay.

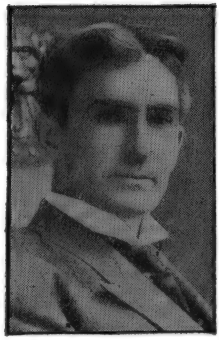
A movement has been under way among the negroes of certain parts of the South to induce emigration to Liberia. Such movements have been started from time to time, and about fifteen years ago active steps were taken to form colonization parties. Some were sent to the African republic, but as many as could returned to the United States in a short time. While conditions in Liberia seem to be suitable for the negro, it was claimed that the Southern black man of the United States had been too long accustomed to a paternal government and to having his wants supplied without great effort on his part to be satisfied to take up new and greater responsibilities than he or his forbears had known. In Liberia he found it necessary to direct his opinions for himself and to enter as a principal into the political and business life of the country. Negroes from America number about 60,000, however. These have become factors in the government, and have been instrumental in advancing its economic position.

Literature in 1903.

HENRI PENE DU BOIS.

It is necessary still to defend style. Most readers have airs of apostles rather than of critics. This is not said with the idea that it may displease them. They have distinctive minds, but they are, above all things, prophets. They are severe. They do not like writing for the sake of art of writing. In their view literature is the beast of the Apocalypse.

A well-made phrase seems to them to be a public danger. They make one think of Tertullian, the sombre. He said that the Virgin could not have been beautiful, because if she had been beautiful she would have been loved for her beauty, which is not imaginable.



Most readers think that style is evil. They think so even when they have style themselves, so true it is that the human mind is an abyss of contradictions. And the book publishers are obliged to be impressed by them, extremely, for book publishing is a business, and business is to make money, and the way to make money is to sell others what they want.

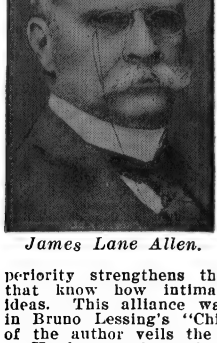
Henry James's "Ambassadors" was not what they wanted. It was too learned, too spiritual and too well written. But book publishers have the right to be disinterested when they wish to be artistic. A condition of art is to be disinterested. The work was printed in the North American Review, that had never printed a novel. It was the literary event of the year.

William Dean Howells's "Letters Home" and Edith Wharton's "Sanctuary" were other works of devotion to literature, but they had not the literary

Theodosia Garrison.

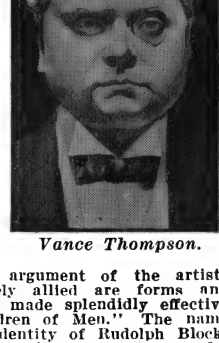
Rev. Thomas Dixon, Jr.

Charles E. Rich.



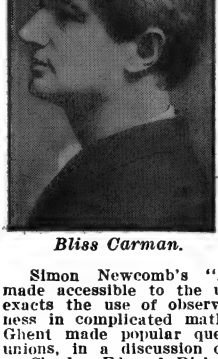
Woodrow Wilson.

aristocracy of Henry James's "Ambassadors," that only Henry James, perhaps, may have won the privilege to express. The books of the year that excited attention were, like those of the year before, made to be popular.

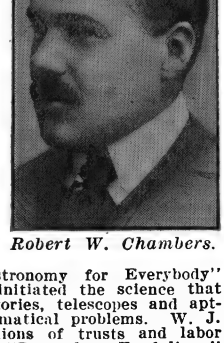


They were John Fox's "Little Shepherd of Kingdom Come," David Graham Phillips's "Master Rogue," James Lane Allen's "Mettle of the Pasture," Alice Brown's "Judgment," Thomas Nelson Page's "Gordon Keith," Molly Elliot Seawell's "Fortunes of Fifi," George Ade's "In Babel," Robert W. Chambers's "Maids of Paradise," Onoto Watana's "Heart of Hyacinth," Henry Seton Merriman's "Barlasch of the Guard," Gertrude Atherton's "Conqueror," Stewart Edward White's "Blazed Trail."

Two of them—"Mettle of the Pasture" and "Judgment"—had the same theme, the attitude of a young woman at the revelation of an unwise love in the past of the man that is to be her husband. In "Mettle of the Pasture" she rejects, in "Judgment" she forgives him. And the superior psychology is clearly in "Judgment."



Happily the style of "Judgment" is superior to the style of "Mettle of the Pasture," for this su-



James Lane Allen.

Bliss Carman.

Robert W. Chambers.

periority strengthens the argument of the artists that know how intimately allied are forms and ideas. This alliance was made splendidly effective in Bruno Lessing's "Children of Men." The name of the author veils the identity of Rudolph Block.

He has much merit in using a pseudonym, for his book is of stories which made him famous among newspaper men. They would say that his stories were incomparable at the sight of his signature, and they will have to regard them now independently of his personality. It is authoritative. The stories of the "Children of Men" are to be admired without a thought of who wrote them.

They have the vividness of things seen. The author's aim was to make familiar the poverty nobly borne, the patient work, the heroism, the sadness and the humor of the East Side's men whom the rest of Manhattan hardly knows. He had not at heart the making of beautiful phrases. But one makes beautiful what one loves.

The author has made the personages and scenes of his stories tell themselves through him simply. And their style is that of the cathedrals that were built from the inside. It is entirely admirable.

Another book of short stories made for the most studious analysis was Henry James's "The Better Sort."

Mary Johnston's "Sir Mortimer," a tale of the time of Queen Elizabeth, had the merit of being a historical novel only in its scenery, the author having placed in it an expression of the love of all epochs. Clara Louise Burnham made of "The Right Princess," a novel, a legend of Christian Science analogous to the tales of the Legenda Aurea.

Poultney Bigelow continued his "History of the German Struggles for Liberty." Thomas J. Janvier described in his individual and graceful style the "Dutch Founding of New York." Brander Matthews revealed, with precise erudition, the records of the "Development of the Drama."

John Boyd Thacher told in a work of painstaking study, "Christopher Columbus," details of the life of Peter Martyr, historian of Columbus, that other experts in Americana did not know. Rupert Hughes made, in the "Musical Guide," an invaluable encyclopedia of music.

Simon Newcomb's "Astronomy for Everybody" made accessible to the uninitiated the science that exacts the use of observatories, telescopes and aptness in complicated mathematical problems. W. J. Ghent made popular questions of trusts and labor unions, in a discussion of "Benevolent Feudalism."

Charles Edward Rich thought of picking up the threads of the stories that amused the boyhood of another generation, and renewed the art of that literaure in "A New Boy at Dale." It is a story for American boys expressly. It has the courage of

their convictions and an individual charm. It is healthy, active, interesting. It makes of its author the specialist in fiction for boys.

There was the most praiseworthy effort of literary criticism in the work of George E. Woodberry, professor of Comparative Literature at Columbia University. He verified in Edgar Allan Poe the Southern influence that art critics have found in Whistler. Whistler was not of the South, but his mind and Poe's were twins.

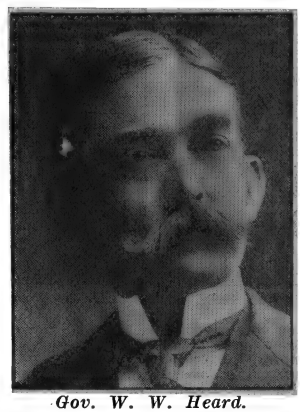
As they are distinctly American to all the world, having given to art original ideas and forms, the South may not be chided too much for its habit of assuming that to be Southern is to be intensely American. But literary criticism is not yet popular. If one ask for the writers that wrote greatly successful works of literature, they were Irving Bacheller, Arlo Bates, Cyrus Townsend Brady, Thomas Dixon, Jr., Finley Peter Dunne, George Cary Eggleston, Jack London, George Horace Lorimer, George Barr McCutcheon, Owen Wister.

The critic of American minds of 1903 must read the books that they have preferred. They are, apparently, "Fables in Slang," "Maids of Paradise," "My Friend Prospero," "Letters from a Self-Made Merchant to His Son," "Graustark," "The Virginian," "Sir Mortimer," "Children of Men," and the historical novels that are full of dangerous experiences.

The manners that they reflect are entirely creditable to America, but they do not reflect all the manners of America, especially not all the manners that are creditable to its intellectuality. The novel of the future, in the view of an alert observer abroad, is to mark the new social conditions that come of woman's invasion into offices that had been restricted to men. And the field of observation is, in America, broader and more interesting assuredly than elsewhere. Its novelist is, doubtless, at his work.

Mrs. Humphry Ward's "Lady Rose's Daughter" and Rudyard Kipling's "Five Nations" were the most successful books of England, naturally. Statistics showed that book publishers had to meet, at the commencement of the year, the competition of 7,833 new books and new editions, American and English, printed here and imported, of 1902. Their list is given here by permission of the Publishers' Weekly, which compiled it, as follows:

Classes.	Books by American Authors.*	Books by Foreign Authors.*	Books by English Authors, Imported.
Fiction	903	818	76
Law	622	2	16
Theology and religion	433	78	128
Education	408	108	63
Literature and collected works	311	136	96
Juvenile	388	39	87
Poetry and drama	220	130	49
Biography and correspondence	253	37	95
Physical and mathematical science	257	19	80
Description, geography, travel	267	13	83
History	178	59	64
Medicine, hygiene	243	30	26
Political and social science	223	8	40
Fine arts—illustrated gift books	110	47	60
Useful arts	126	6	33
Philosophy	62	26	15
Works of reference	98	2	11
Domestic and rural	73	0	14
Sports and amusements	46	8	7
Humor and satire	46	8	7
Totals	5,210	1,578	1,015
Grand total			7,833



*Includes new editions published in United States.

The list of 1903 is to be more amazing in numbers. The lovers of art in literature are not sorry that the number of books increases year by year. They say that the more books there are, the more difficult it is to attain distinction by writing books, the nearer is to be the golden age of art in literature. For there are no new stories, no new ideas, ever. There are only new forms of expression. And they have to be artistic. Renan said: "Things done without the Athenians are done without glory."

Louisiana.

Capital:
BATON ROUGE.

Louisiana has an area of 45,399 square miles and in 1900 had a population of 1,381,625. In 1541 De Soto discovered the Mississippi and in 1682 La Salle voyaged down this river to its mouth, naming the country Louisiana and taking possession of it in the name of the King of France. In 1716 Bienville established Fort Rosalie in the Natchez country and in 1718 founded New Orleans. In 1717 the Mississippi Company was formed by John Law for colonization purposes, and in 1732 resigned its claim to the territory and Louisiana became a royal province. In 1735 the first settlement was made at Baton Rouge. In 1750 the cultivation of cotton was begun in the territory. In 1755 Louisiana received a large increase in population from the Acadians, who were driven from their homes in Canada. By a secret treaty in 1762 France ceded Louisiana to Spain, and in 1768 the French drove the first Spanish Governor, Don Antonio de Ulloa, from the colony. In 1800 Louisiana was ceded to Napoleon by Spain, and in 1803, on April 30, was purchased from France by the United States for 60,000,000 francs. In 1806 and 1807 Aaron Burr's scheme to set up an independent nation in the Mississippi Valley caused much disturbance in New Orleans, and in 1810 residents of eastern Louisiana formed the republic of West Florida in an attempt to overthrow the Spanish government there. The district was taken under the control of the United States and made part of Louisiana during the same year after some trouble.

Gov. W. W. Heard.

In 1812 Louisiana was admitted to the Union as a State, with boundaries as they are now. That same year the first steam vessels on the Mississippi arrived from Pittsburg. The battle of New Orleans between the British and Americans was fought January 8, 1815, and it was the last battle of the War of 1812. During the period from 1815 to 1860 there was continual industrial activity and Louisiana soon became one of the leading agricultural States. In 1850 Baton Rouge became the seat of State government.

On January 26, 1861, Louisiana passed the Ordinance of Secession. The first gun cast for the Confederate navy was made at Gretna, near New Orleans. Port Hudson, the last Confederate stronghold on the Mississippi, was captured by General Banks July 8, 1863, and on May 26, 1865, the war in Louisiana was ended by the surrender of General Kirby Smith. From 1865 to 1874 a period of carpetbag government caused many disturbances, and on September 14, 1874, it was overthrown and a representative government established. In 1884 the Industrial Cotton Exhibition was opened at New Orleans, celebrating the centennial of the first exportation of cotton from the United States. In 1890 Chief of Police David C. Hennessy, of New Orleans, was killed by an Italian criminal. In 1891 an organized band of citizens killed eleven Italian prisoners in the parish prison at New Orleans.

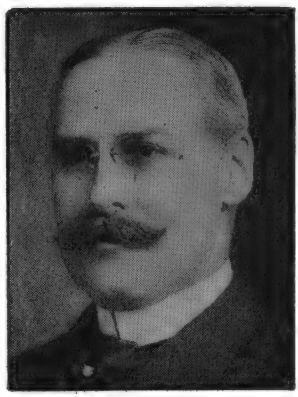
Events in 1903.—The Louisiana Supreme Court decided in March that the "Jim Crow" street car law, which was put in operation in November, 1902, is constitutional. The law was vigorously opposed by the negroes, who resent it greatly. Many of the better class of negroes in the cities have ceased using the street cars since it was put in operation. The court declares that the Louisiana Legislature

has a right to separate the races in the cars if the negroes receive equal accommodation with the whites.

During the year a remarkable growth was shown by the city of New Orleans, which is gradually losing its old-time aspect. The crowds of Winter visitors which fill the city every year have brought to it a spirit of the energy of the North, and business is beginning to absorb every other interest, as it is doing in all parts of the South. Work on the new drainage system, a system that New Orleans has long needed, is moving toward completion. The city is spending about $19,000,000 in improvements looking to better sanitation and more comfort. By the Board of Health census, made in 1902, the city was given a population of 310,000, against 287,104 shown by the Federal census of 1900. Immigration is being encouraged, and, according to printed reports, the city affords better opportunities for business than any other city in the South.

In the latter part of December strong feeling was aroused throughout the State and the entire South by the action of President Roosevelt in closing the post office at Indianola, Miss., because of a protest against a negro postmistress appointed by the President. Lawlessness became evident in some of the outlying counties, and especially in those strongly French. In Amite County lawless bands drove the negroes from their homes, burning houses and causing a general reign of terror among the blacks. Farmers and business men organized to protect their laborers and tenants, and in spite of a compromise effected the latter part of December, continued in readiness to deal sternly with any raider caught. The negroes, as many as could, left the county for other points where they might find more peace, leaving that section almost without farm hands and general laborers.

Serious floods on the Mississippi threatened Baton Rouge in March and caused much damage to plantations along the river. Three breaks occurred in the levee near that city in spite of the erection of temporary sand bag embankments.



Maine.

—

Capital:
AUGUSTA.

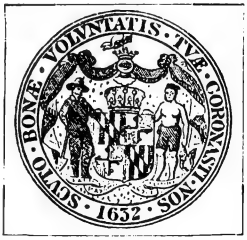
Maine has an area of 33,040 square miles, and in 1900 had a population of 694,466. The State was supposed to have been first visited in 1009 by Norsemen under Thorfinn, but the first recorded account of the territory was given by Andre Thevet, a French priest, who visited Penobscot Bay in 1556. In 1614 Captain John Smith explored and made a map of the coast, and in 1615 attempted to effect settlements. The first permanent settlements were made at Monhegan, Sagadahoc, Pemaquid and Saco, and in 1625 New Plymouth colonists began to trade on the Kennebec River. In 1632 Acadia was resigned to France. In 1636 Sir William Georges formed the first organized government within the boundaries of the State. Massachusetts, in 1652, enlarged her boundaries so as to bring a large part of the Maine settlements within her charter, and in 1660, at the restoration of Charles II., contention and confusion were brought into the colony by the opposition of Georges and others to the government of Massachusetts. In 1665 royal authority was proclaimed and a provisional government established. The province was purchased by Massachusetts in 1678, and in 1691 the provinces of Maine and Sagadahoc were brought under the charter of William and Mary, with Sir William Phipps as Governor. In 1739 the New Hampshire boundary dispute was settled by the King in council.

Gov. John F. Hill.

In 1765 began the resistance to British aggression and the Stamp Act, and stamps were burned at Falmouth. Falmouth was bombarded and burned in 1775, and the first naval conflict of the Revolution took place off Machias in the same year. A project for a separate State was mooted in 1786, and in 1819 Maine was made a separate State, after several attempts. March 3, 1820, admission to the Union was gained. In 1830 the State Legislature moved from Portland to Augusta, and in 1832 the latter place was made the State capital. The "Maine Law," to prohibit drinking-houses, was first passed in 1851. It was repealed in 1856 and passed again in 1858, being made a part of the Constitution in 1884. The death penalty was abolished in 1876, restored in 1883, and again abolished in 1887. The growth of the wood-pulp and paper-mill industry began about 1880, and in 1890 there was a rapid development of the lumber, granite, ice and fishery trades.

The chief industry of the State is the manufacture of cotton goods, due to excellent water power and transportation facilities. The lumber industry ranks of next importance. The State holds a high place in the manufacture of woolen products.

Events in 1903. — Among many of the important measures passed by the Maine Legislature were the following bills: Establishing a tax of $15 on all non-resident hunters who come to the State for big game; authorizing the use of "stickers" on official ballots; reducing the tax on savings banks to ¾ of 1 per cent on deposits; increasing the salaries of Supreme Court judges from $3,500 to $5,000; setting apart as Old Home Week the second week in August; making the Naval Reserves a part of the National Guard; authorizing the establishment of municipal fuel yards; establishing a commission to consider a change of the State capital; directing the publication of unclaimed savings bank deposits; enlarging the powers of the Railroad Commission, and exempting religious institutions from the collateral inheritance tax. The "consent clause," whereby existing telephone or telegraph lines were protected from competition, was repealed. Regulations in the use of automobiles on the public highways were established, and the penalty for an assault on an officer was increased. A plan to enforce prohibition all over the State was arranged in March, and by June 30 Bangor was the only town in which liquors could be obtained with any degree of ease. Many arrests of saloon-keepers had been made in April and May, and the heavy fines imposed discouraged attempts to break the the law.



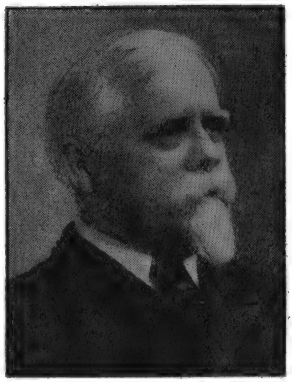
During June extensive forest fires caused much damage to timber in the "woods" and menaced towns and cities. Several places were invaded by the flames, and at one time Bangor was threatened. On September 12 the town of Eustis was practically destroyed by fire, with a loss of about $100,000.

Among the bills which failed of passage was one appropriating $50,000 for the St. Louis Exposition; the important measure asking the resubmission to the people of the section of the Constitution forbidding the sale of liquor; the resolution favoring the election of United States Senators by the direct vote of the people, and the bill increasing the public school funds.

Maryland.

—

Capital:
ANNAPOLIS.



Maryland has an area of 12,210 square miles, and by the census of 1900 had a population of 1,188,044. The first settlement of Maryland was made in 1631, by Captain William Clayborne and a party of men from Virginia. The charter under which the colony was permanently established was granted by Charles I., in 1632, to Cecilius Calvert, second son of Lord Baltimore. The expedition designed to commence the settlement sailed November 22, 1633, and consisted of about 200 persons, mostly Roman Catholics and gentlemen of fortune and respectability. On March 27, 1634, a settlement was established at St. Mary's, near the entrance to Chesapeake Bay, and Leonard Calvert became the first Governor. Captain Clayborne's refusal to submit to the Calvert government resulted in his expulsion from the colony. In 1635 the first Assembly met and submitted several laws to the approval of the proprietary. A dispute which arose respecting them was settled in 1638 and in the following year the first statutes of Maryland were enacted. In 1642 a company of Puritans from Virginia settled in Maryland and began to show a spirit of resistance, and about the same time Clayborne returned from exile and took possession of Kent Island. In 1650 the Puritans' settlement was separated into a distinct county known as Anne Arundel, and shortly afterward Charles County was organized for them. In 1652, assisted by commissioners from England, they established the Commonwealth of Maryland. The efforts of Lord Baltimore to regain the country resulted in several battles, the decisive action being fought March 25, 1655, when the Puritans were victorious. In 1662 the power of the proprietors was re-established.

In January, 1730, Baltimore was laid out, and Frederick City was founded in 1745. The boundary between Virginia and Maryland had been settled in 1668, but that on the side of Delaware and Pennsylvania was not finally adjusted until 1760. Maryland bore an active part in the conflict between the

French and English and during the Revolutionary War. At the beginning of the Civil War many citizens of Maryland favored secession and many entered the Confederate army. The Legislature refused to pass the Ordinance of Secession, but took various measures looking to neutrality. After the election in November, 1861, the majority of the people seemed to be in favor of the Union, and Maryland furnished her quota of troops to the Federal army.

Maryland's most important industry is that of canning and preserving fruits. Iron and steel manufacturing occupies second place, while foundry and machine products are third in rank. In the manufacture of cotton products the State has grown rapidly in recent years, and Baltimore is now the largest producer of cotton duck in the United States.

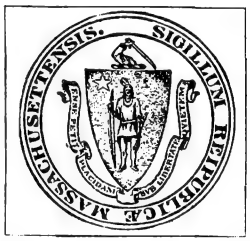
Events in 1903.—Maryland has been distinguished by several extremely close political contests during 1903, the most noteworthy being the three-sided fight on the occasion of the Spring election in Baltimore. Long before the primaries Mayor Hayes and his friends were confident that they could defeat the Democratic organization, but, when the primaries were held, they themselves were overwhelmingly defeated. More than ordinary interest centred in these primaries, owing to the fact that both parties voted under a direct nomination system for the first time, and the result, so far as the Democrats were concerned, was a great victory for Senator Gorman and his State and city machines. The "machine" nominees were chosen almost without exception in spite of a strong fight put up by the opponents of Mr. Gorman. In the election itself there were closely contested fights, and the success of many of the Republicans who earned pluralities was admittedly due to Democratic dissension.

Gov. Edwin Warfield.

A factional fight for the control of the Republican organization in the State aroused much bitterness. Senator McComas was opposed by Representative Mudd, and at the election for delegates it was claimed that votes were openly bought by both sides, in some cases being bid for as though at auction. Senator McComas was successful, but at the convention held in September another opponent developed—W. H. Jackson, a millionaire politician, whose brother was seeking the same office from the Democratic convention as an opponent to Senator Gorman. It was thought that the result of the State election would decide the complexion of Maryland at the Federal election in 1904, Maryland being considered a doubtful State and needing but little weight to turn it either way.

During the Spring a drought, which continued without intermission for nearly seven weeks, played havoc with the early vegetables and fruits, and the representatives of the great canning industries found themselves compelled to pay 20 per cent more than usual for all the strawberries, tomatoes and early peas they purchased.

On March 24 experiments were begun with the big new coke plant at the Maryland Steel Works, at Sparrow Point. It has taken two years to construct the plant, which comprises every kind of labor saving machinery known to this industry, including a pushing machine to drive the finished coke upon the platform.



At the State election held November 3 Edwin Warfield, the Democratic candidate, was elected by a comparatively small majority.

Massachusetts.

—

Capital: BOSTON.

Massachusetts has an area of 8,315 square miles, and by the census of 1900 had a population of 2,805,346. The first settlement in Massachusetts was made on the Elizabeth Islands in 1602, by Bartholomew Gosnold and thirty-two other English colonists. It was soon after abandoned, and it was not until the passengers on the Mayflower established themselves at Plymouth, December 22, 1620, that a permanent settlement was formed. For three years the colony suffered many hardships and was often on the verge of famine. Other colonists joined the party at Plymouth, and when a party under John Endicott arrived in safety several companies were organized and a royal patent was obtained for the Massachusetts Bay Company. In 1629 there came a large reinforcement of men, women and children, and the patent and government of the company were transferred from London to New England. From this time until 1664 there was a series of disputes between the colony and the King, and in the latter year a commission was sent over to look into the affairs of the people. The commission was unsuccessful in arriving at a decision, and in 1684 the High Court of Chancery in England gave judgment for the Crown against Massachusetts, and the charter was declared forfeited. Joseph Dudley was appointed president, and a new commission succeeded the government under the charter. In 1686 Dudley was succeeded by Andros, whose conduct made him so obnoxious that he was seized and imprisoned by the people of Boston. This was a signal for a general uprising, and the colonists then seized the fortifications and the ships in the harbors. The accession of William and Mary ended the troubles. Massachusetts took part in the war between the French and English colonies in 1690. In 1703-4 the province suffered much from the French and Indians, and in 1722 a war for final peace was begun, and ended in 1725. The State's position in the events which preceded the Revolution is well known. During the Civil War Massachusetts furnished a large proportion of Federal soldiers and sailors.

Gov. John L. Bates.

Events in 1903.—Among the important acts passed by the Massachusetts Legislature was a resolution providing for a commission to reconstruct and revise the laws of the State relative to employers and labor. On July 9 Governor Bates appointed as members of this commission Carroll D. Wright, of Worcester; Henry Sterling, of Medford; Royal Robins, of Beverly; David R. Dewey and William N. Osgood, of Lowell. A report will be made at the next session of the General Court. An attempt was made by George Fred Williams in January to formulate a plan whereby the members of all political parties could meet on common ground. The principles involved were the referendum for all legislation, public ownership of public utilities and a restriction of the powers of judges in equity.

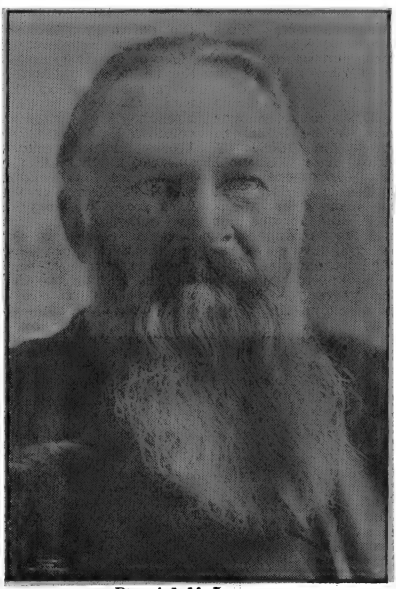
The town meetings held in March showed a marked gain for the Socialists, especially in those towns where manufacturing is the chief industry. In Amesbury the greatest gain was shown, but the most activity was evidenced in Brockton. In Stoughton the Socialists had been organized but three weeks before the meeting, but they

succeeded in electing several important officials. By a decision of the Supreme Court in January the contested election in the town of Haverhill was given to P. B. Flanders, the Socialist candidate. Charges of bribery were brought against a member of the State Legislature by a Boston merchant in May, and the matter was taken up by the Senate for a more thorough investigation. Charges of wholesale repeating in the Eighth District of Boston at the November elections were investigated by the Senate in March. In April the Supreme Court decided that the statute providing for compulsory vaccination is constitutional on the ground that its tendency is toward the general good.

The new corporation laws permit of unlimited capital stock, non-resident officers and directors and directors' meetings, non-liability of stockholders for debts, except for wages and in case of illegal acts, and provides for a charter fee of one-fortieth of 1 per cent of the capital stock and a franchise tax of one-tenth of 1 per cent of the market value of the capital stock.

Demands by cotton mill operatives, and strikes following their refusal, caused a general curtailment of work at the mills at Lowell and Fall River in March. In August, owing to the high price of cotton, due to the dealings on 'change, several of the large mills in the State were closed for a time, or their productions were curtailed.

On July 29 the powder magazine of the United States Cartridge Company, at South Lowell, exploded, killing 20 persons and injuring 70 others. A number of buildings were destroyed and many others badly damaged by the explosion.



Medicine and Surgery in 1903.

R. STRENSCH LE STRANGE, M. D.

When I stated in the preceding issue of The American Almanac that the last twenty-five years have advanced medical science far more than the previous 250 years, we find it proved also in the discoveries relating to scientific medicine of this current year. Pasteur, Lister, Koch, Ramon y Cajal, von Fitz, von Virchow, Roentgen were some of the most conspicuous examples of men eminent in science—giants in their special field. This year brought us Lorenz, the Curies, new methods and new inventions.

Ethics.—The American Medical Association adopted unanimously in May the new code of medical ethics. This defines the duties of physicians to their patients, professional service of physicians to each other, the duties of physicians in regard to consultations, the duties of physicians to each other and to the profession at large, the duties of physicians in case of interference, differences between physicians' compensation and duties of the profession to the public. The adoption of this code will prove to be a decided progress toward bringing the whole profession into accord.

Physiology.—In his paper, "The Ductless Glands as Organs of the First Importance in the Vital Functions and Their Relationship to Disease and Therapeutics," Dr. Sajous, of Philadelphia, discloses an important discovery as a result of fourteen years' study. The two small organs placed just above the kidneys known as the suprarenal glands, regarded as virtually useless, secrete, according to his investigations, a substance which, carried to the lungs, takes up oxygen and forms another substance which becomes mixed with the blood. It is this last substance, called adrenoxin, which supplies the tissues with oxygen, a duty so long credited to the red corpuscles. The suprarenal glands are connected by nerves with a small organ in the brain, the use of which has hitherto not been known, which governs them and regulates their absorption of oxygen. In this organ of the brain, called the anterior pituitary body, all poisons work, and it fights them by arousing the glands to take up more oxygen. More oxygen means more combustion—the burning up of poison—of which the symptom is fever. A strong pituitary enables a man to lay in a good supply of oxygen and to destroy disease germs, and as this organ can be stimulated on occasion by drugs, patients with weak pituitaries may make a better fight against germs. Dr. Sajous considers that what we have been used to call vitality is simply pituitary efficiency.

Dr. Adolf Lorenz.
Copyright, 1902, by Marceau.

Experimental Pathology.—Dr. Loeb, of Chicago, has discovered facts that suggest a cure for muscular and nervous diseases, such as St. Vitus' dance, paralysis agitans, locomotor ataxia and sleeplessness by administering certain salts of calcium. From experiments he concluded that we owe it to calcium ions in the blood that our muscles do not twitch or beat rhythmically like our heart. When we inject into the body of an animal any salts that are liable to precipitate calcium we notice almost immediately twitchings of all the muscles. Therefore, in the pathology of muscular twitchings the concentration of the calcium ions (very minute particles) in the blood should be taken into consideration, as it follows that abnormal muscular twitchings and contractions may be brought about in an organism by a reduction in the proportion of calcium (or magnesium) in the muscles.

Materia Medica.—An entirely new remedial treatment for consumption consists of the inhalation of a vapor produced by heating a mixture of eucalyptus oil, sulphur and charcoal, and it is stated that it is more effective than any serum or other remedy hitherto tried. Sixty per cent treated by Professor Sommerfeld in Berlin were completely cured. The vapor of this new curative agent, called "sanusin," kills the tubercle-bacilli. It will probably be safe to accept for the present the conservative but positive statement of Dr. Engel, the expert charged during the recent experiments with the examination of the sputum, in which he has had a long experience under other forms of treatment. His statement is that under no other treatment has he seen the character of the sputum change so rapidly and uniformly through the diminution and disappearance of bacilli and the elastic fibres peculiar to tubercular disease as under the treatment with sanusin. The American Consul-General at Berlin, F. H. Mason, mentions in his report as the inventor a druggist, Zavier B. Schneider.

Organotherapy.—This line of therapeutics is advancing gradually but surely, and is fulfilling its promises in offering most valuable medications.

Serumtherapy.—The general work of treating disease through the inoculation of animals has been carried on so extensively all over the world that we expect almost anything in the way of result.

(A) Hay Fever.—Professor Dunbar, head of the Hygienic Institute at Hamburg, on the ground that this disease is caused by the pollens of gramineae (grasses), found its cure by a toxine made of serum

taken from rabbits. It is obtained by inoculating these animals with poison extracted from pollens of various kinds of grasses. While the patient is treated with the serum he remains indoors, with closed windows.

(B) Scarlet Fever.—A new anti-streptcocus serum to destroy the germs of scarlet fever was discovered by Dr. Aronson, a bacteriologist of Berlin, and it was given an extensive clinical test by Dr. Baginsky, professor of diseases of children in the University of Berlin and director of the Kaiser and Kaiserin Friedrich Children Hospital. The experiments with this new serum began last July, and the cases experimented on were selected regardless of severity. Eighty-eight per cent of those treated were discharged as cured, and their recovery was without the usual complications attendant upon scarlet fever.

(C) Typhoid Fever.—In practice the treatment of typhoid by means of a serum has until now been unsatisfactory. The new method which has been reported upon by Dr. McFadyen differs only slightly from that to which Dr. Buchner, of Munich, called attention some time ago. The fact that the method proposed has the indorsement of the father of antiseptic surgery, Lord Lister, entitles it to careful consideration on the part of the profession, and good results may be expected.

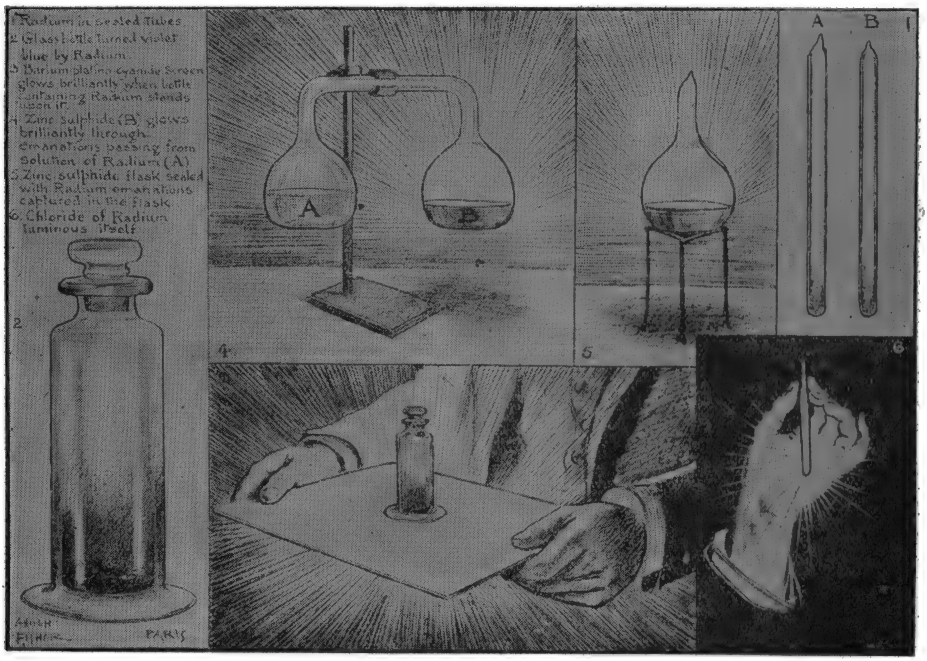
(D) Cholera Infantum.—Last Fall the announcement that, under Dr. Welch, of the Johns Hopkins Medical College, two students had discovered the bacillus of this disease was received with profound interest. Since then qualities of the needed serum have been discovered, and the anti-toxin has been ready for practical use since last Summer (1903) after it was tested with perfect success on animals and persons.

(E) Tuberculosis.—Dr. Marmorek, of the Pasteur Institute in Paris, has succeeded after years of experiment in securing a tuberculosis serum which in numerous cases has proved a specific cure. Still more important will prove Professor Behring's discovery of a serum by means of which cattle can be made immune to tuberculosis. His experiments proved absolutely that a child treated with the serum would be immune from consumption for life.

(F) Tetanus.—Dr. McFarland announces in the Journal of the American Medical Association of July a new method of treating wounds in which the tetanus bacillus is suspected. The treatment consists of sprinkling on the wounds, after they have been cleansed, a dried anti-toxin serum powder. As this preserves its activity indefinitely, it requires no instrumental administration, but can be conveniently sprinkled from the bottle from which it is dispensed.

(G) Locomotor Ataxia, Etc. — The goat lymph treatment has proved decidedly of great value for such ailments.

Neurology. — My own method of "nerve vibrations," mentioned in the last year's Almanac, was applied most successfully in a severe and chronic case of "tic douloureux," in long-standing deafness, in fatty degeneration of the heart muscle, in neurasthenia, insomnia and morphinism, and has proved in such diseases of the utmost value. The vibration theory has consequently reached its recognition as one of the most important therapeutic agents for direct practical use. In the same sense has been introduced in St. Luke's Hospital during the past Winter a system of musical therapeutics, as in certain forms of disease the use of music, as directed with trained knowledge, has been of marked benefit, the relative and specific effects of rhythm and melody and harmony upon persons suffering from maladies such as melancholia and acute and chronic mania showing satisfactory results in many cases. Stimulating music is used for maladies in which there is languor and depression, and brass instruments are strongly recommended in such cases. A soprano voice has been found to be mildly stimulating in comparison with the more soothing and relaxing contralto. Wagnerian music is valuable in cases of a hysterical or congested condition because of its expansive, uplifting and bracing qualities. The course of study and training in this new field of healing includes the departments of the history of music as a healing power, the fundamental principles of musical psychology, the musical gift and how to develop it for healing, diagnosis and the choice of songs and instruments. The commission of experts in mental diseases appointed by the Prussian Ministry of Education to investigate the healing value of hypnotism reports that it is essentially worthless. The report declares that hypnotism cannot produce organic changes nor cure epilepsy nor hysteria, but it can be used helpfully in some instances by removing symptoms through suggestion. The influence of hypnotic suggestion diminishes in proportion to popular knowledge of it. It is most powerful when regarded by a subject as marvelous and supernatural. The commission also notes that hypnotism is less used than formerly. Fancy work has also been applied as a remedy for upset nerves; it has a soothing, hygienic effect on the worker; it arouses the imagination to the desired



Professor and Madame Curie.

degree and leads to an interest in color and design that is mildly stimulating.

Blindness.—Professor Steins, of Paris, alleges that he has discovered the secret of restoring sight to the blind. The announcement is published in the Revue des Revues by Dr. Caze, who explains how Professor Steins tested his apparatus on him, by which the professor is not only able to restore lost sight, but to give vision to those who have never known it. Professor Steins' claim rests on the theory that man does not see with the eye, but with the brain, the eye only serving to receive the image, which the optic nerve transmits to the seat of perception. If, then, the image can be transmitted to the brain without eyes a blind person can see as well as anybody else. The professor's apparatus has the same scientific basis as the telephone, with the substitution of light for sound.

Deafness.—Miller Reese Hutchinson, of Alabama, is the inventor of the marvellous "acousticon," which overcomes deafness of even many years' standing in the most effective way. The appliance is in three pieces. The heart of the invention is centred in a vulcanized disc that may be attached to a waistcoat or underclothing. The reverse side of this disc is

Radium, the Most Mysterious Substance in Nature.

hollow and filled with gases, the nature of which Dr. Hutchinson alone knows. The ear-piece, which resembles that of a telephone, and the vulcanized disc are connected by wires, and an electric storage battery that is easily carried in a pocket supplies the current that connects the disc and the ear-piece.

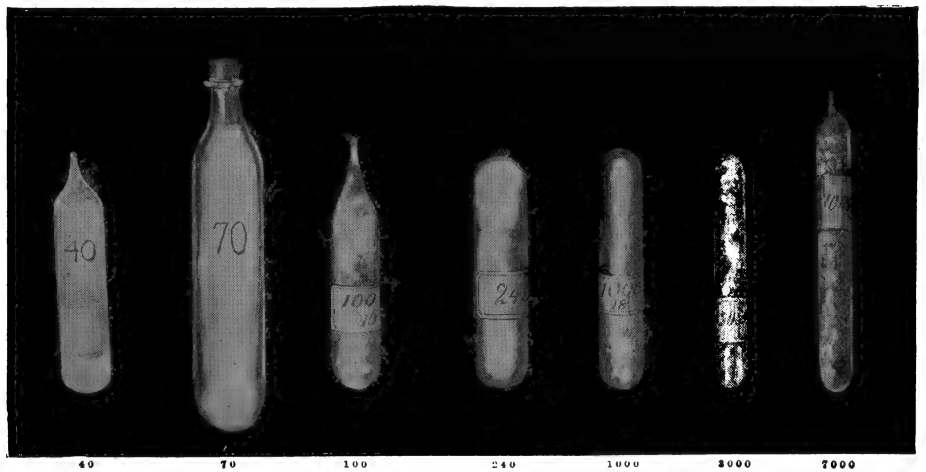
Laryngology and Rhinology.—The electro-magnet has been applied successfully for the extraction of foreign bodies in the air passages. Snoring can be overcome by the use of a very simple device of Dr. **Veis, of Frankfort-a-M.** The device consists of two flannel bandages about four centimetres wide. The middle of one is laid across under the chin and the ends are carried up and tied at the vertex. The other is then laid across the occiput, the ends carried forward and tied over the forehead. At the point where these bandages cross each other on each side of the head they are pinned together to prevent slipping. Very slight pressure need be used in tying the bandage which holds up the chin, as the latter falls only by reason of relaxed muscles, and very little force is needed to hold it in position. Dr. Veis says that in those cases treated by him it was necessary to wear the bandage only from eight to fourteen nights, when the habit was overcome.

Electricity.—Dr. Snow, of New York, has in many cases of different nature proved the great value of the brush discharge received from the static machine. In rheumatoid arthritis, in gout, sprains, inflammations and sweilings the same acts promptly and safely. For locomotor ataxia he used the wave current with decided benefit. Dr. Robert Newman, whose recent death we mourn, left to the profession and to the world his method of electrolysis, which is recognized as being far superior to any other cure applied to diseases of his specialty.

Bacteriology.—Dr. Castellani, of Uganda, Africa, has discovered the microbe of the sleeping sickness. Dr. Meltzer, of New York, a graduate of the University of Berlin, has demonstrated that incessant vibrations and violent shocks are destructive of germ life. He has also furnished valuable data on the problem as to vibration being a factor in the maintenance of life, a theory which I have practically demonstrated, especially in cases of "dying of old age." Formalin has been successfully used in different cases of puerperal septicaemia. This new specific in the treatment of blood poisoning, however, still meets with conflicting expressions of opinion on the result of the treatment. The discussion before the New York State Medical Association on January 19 seems to show that saline solution offers greater safety in such cases than formalin, though it was admitted that the formalin solution in a few cases had been too strong. Future practical experiences will, we shall hope, prove the absolute value of formalin in septicaemia. It must be of incalculable benefit to humanity if in a weak solution—500-750 cubic centimetres—(1-5000), having germicidal properties, which can be injected without mortal injury, we have found the remedy for a deadly disease which has always defied science, as in the case of President McKinley. Dr. Keller, of the University of Pennsylvania, injected formalin in a case of advanced tuberculosis, and, with the complication of acute puerperal septicaemia, the patient's condition seemed hopeless; but she was saved. He is treating several other tuberculosis patients in the earlier stages of the disease with the formalin solution, and he believes it will cure tuberculosis before it has reached the last stages and that it will prove of great relief even in the most extreme cases.

Professor Koch's observations, before the celebrated London address, caused the Imperial Health Office in Berlin to appoint a tuberculosis commission to make systematic experiments. Their report summarizes as follows: "The series of experiments

strengthens Professor Koch's view that animal consumption as the cause of human consumption does not play the role generally attributed to it." At the Williamsport Hospital an injection of formalin was given in a case of developed hydrophobia. Soon after the temperature fell from 104 degrees to normal and the patient improved in every way. At no time since has he shown any sign of hydrophobia and he seems to be certain of complete recovery.



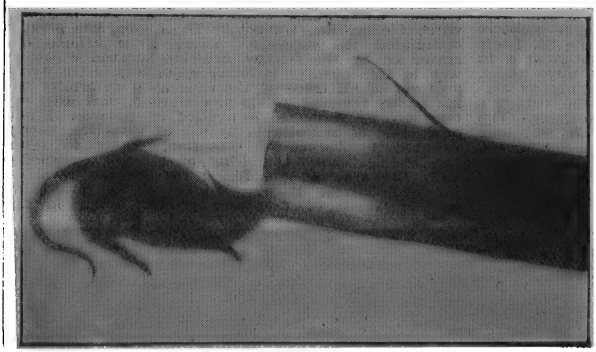
Dr. Garrigne, of Paris, announced in January his discovery of formic acid as a means of curing all microbe diseases—tuberculosis, cancer, diphtheria, hydrophobia and others. The doctor observed that microbes so ravaged the human body that the formiates which vivify the blood are absorbed. When formic acid can no longer be produced the cells die or decompose and the man ceases to live. His theory is to invert this process. To preserve the cells oxygen is necessary, and to produce oxygen he employs formic acid. In a case of tetanus at the St. Louis City Hospital Dr. Nietert injected ten drops of a 10 per cent solution of carbolic acid every three hours, carbolic acid belonging to the same family as formalin, with the result of prolonging the patient's life and offering him a fair chance of recovery. The spasms were reduced considerably and he was able to open his jaws about one inch.

Dr. Beard, of the University of Edinburgh, remarked on the division of the cells, or living units, of the animal body into two groups, such as Weismann set forth. These are, first, the ordinary cells comprising the tissues of the frame, and, second, germ cells, on which rest the duty of reproducing the species. According to Dr. Beard the two groups of cells are distinct from the first, which is rather surprising, seeing that, evolution being postulated all through, a common origin might be regarded as indicating the real manner of their development. He pointed out that germ cells are known to exhibit certain eccentricities of disposition during the progress of development. Thus they may stray away from their proper and natural environment and take up their abode in tissues to which they are strangers. When these vagrant cells settle down in such situations they may attempt either to exercise their reproductive duties in a feeble way or, what is equally important, they may give rise to tumorous or new growths. When it is added that in some cases the tumor appears in the shape of a cancer the interest attaching to Dr. Beard's remark may be appreciated to the full.

Captain Rost, of the British Military Medical Service, who has been investigating malignant cancers bacteriologically for three years, has found in both carcinomata and sarcomata cancers distinct germs of saccharomycetes, which can only develop when the natural chlorine in the tissues falls below the normal quantity. Following this clue, Captain Rost devised a treatment to reinforce the chlorine by special diet, enabling large quantities of common salt, which contains chlorine, to be absorbed. He has experimented with eight patients. One was completely cured and the condition of the others was greatly improved.

Mosquito Destroyers.—The well-known rule of nature that every creature has its natural enemy has been proven by the discovery of the little parasite "agamomermis," the mortal enemy of the mosquito. As there are many technical difficulties in the way of a practical utilization of this "destroyer," of greater importance as a mosquito exterminator seems to be the discovery of a new species of giant mosquito in the Maine woods named "Eucorethra Underwoodi," which eats the larvae of other mosquitoes much as a pickerel does a smaller fish. The victim is caught, shaken violently a few times and swallowed in a few seconds.

Surgery.—The "Lorenz operation" has been the greatest progress in surgery since Lister's introduction of antisepsis. To treat congenital hip disease without knife and without losing blood is the undisputed merit of Professor Lorenz, of Vienna. The extremely encouraging condition of all the patients, without exception, treated by Dr. Lorenz has greatly stimulated the surgeons. Every little cripple operated on by the famous Austrian surgeon while he was in this country is doing splendidly, with every prospect of all trace of the congenital deformity being finally removed. This new method, now used extensively by surgeons, is applied as follows: First, production of anaesthesia by use of narcotics, partly to produce absence of sensation, partly to relax the muscles; second, pulling of the leg outwardly until the head of the femur reaches the level of the acetabulum; third, bending of the hip joint and reposition of the head of the femur in hip socket; fourth, application of plaster of paris, after which the patients are permitted to walk about.



Tubes Showing Radio-Activities from 40 to 7,000.

Another German surgeon of world-wide fame, Professor Mikulicz, of Breslau, operated in the United States, his work being a remarkable elaboration of well-established surgical principles. His perfected methods of performing the most difficult operations show, especially, great rapidity and minute exactness, both essential in surgery. By the success which Dr. Figueira, of Brooklyn, has achieved in operating for a tumor on the brain a new impetus has been given to one of the most difficult and dangerous branches of modern surgery. So delicate is the task involved that medical records show 98.4 per cent of the cases treated have ended mortally, and, with such history staring them in the face, surgeons had almost abandoned the practice of using the knife on the brain as impracticable.

Surgery without the use of ligatures has been exploited and demonstrated by Dr. Downes, of Philadelphia. In all surgical operations as usually performed hemorrhage is controlled by the use of ligatures. The new method consists of the use of various-sized pressure forceps of special design, in the blades of which is an insulated piece of platinum, which is heated by the passage of a suitable electrical current through it. It cooks the tissue under pressure, obliterating its blood vessels. The process is an absolutely aseptic one.

Radiotherapy.—Radio-activity is the great new mystery of science. It is a property possessed by the newly discovered metal radium, disseminated in pitchblende, which is found in sections of Hungary and

Colorado, and also by many other substances. The inexplicable mysteries of radio-activity grow in number every day and there is no immediate prospect of solving them. The possibilities of employing radium in medical work are stupendous, but the practical difficulties are also great. The discoverers of radium, Professor and Madame Curie, of Paris, believe that it furnishes a clue to the nature of all matter. Radio-activity, the ray-producing property of radium, may be also the clue to the mystery of life and the universe. It has already made blind men see and is able to destroy microbes and conquer disease. The relative power of radium to the X-ray is as six to one. Consequently, its curative influence on cancer and tumors will be also greater. In Vienna cancer of the palate and lip, which had been repeatedly but fruitlessly operated upon, has been cured by exposure to the light of radium bromide, the strongest radium preparation in existence. Radium rays also have cured a case of melanosarcoma and several cases of red mole.

Radiograph of a Mouse Caught in a Trap.

Pitchblende, from Which Radium Is Obtained.

Dr. Topham, of Brooklyn, produces a "violet ray" which will penetrate any substance, becoming valuable for radiography. The effect of this ray upon skin diseases has been sufficiently demonstrated to be readily accepted by the medical profession. Unlike the Roentgen ray, it will not burn the flesh. He believes its curative powers almost limitless, his experiments having shown positive cures of three cases of locomotor ataxia, of a number of other nervous diseases and one notable case of infantile paralysis.

Since the discovery of those wonderful radio-active substances, radium and polonium, there has been a distinct stimulus given to the study, not only of radio-active substances, but also to the deeper investigation of those several strange manifestations of light, so imperfectly understood as yet, which have been designated as Roentgen rays, actinic rays and ultra-violet rays. Dr. Finsen, the famous inventor, conducted very extensive and most painstaking researches into the bacteriocidal effects of light, and he has found both ends of the spectrum to possess remarkable curative powers. The red rays have been used most successfully in the treatment of smallpox and for the removal of such disfigurements as birthmarks, moles, etc., and he has also found that by utilizing the blue, violet and ultra-violet rays at the other end of the spectrum lupus has been cured, these rays not only destroying the bacilli, but exciting and stimulating nutrition and exciting activity in granulation, thus assisting very greatly in the rapid recovery from the disease. Professor Finsen has recently received the Nobel prize of $50,000 as a reward for his contributions to surgery and medicine.

Experiments conducted at the University of Colorado indicate that Hodgkins disease can be cured by X-rays, as proved by a severe case treated for two months. Hodgkins disease, or lymphadenoma, is a form of anaemia. Recovery is rare, death generally occurring before the end of the third year.

Railroad Ambulances.—The example the Prussian State Railway set to the world, as I stated in last year's Almanac, has been quickly followed by the Long Island Railroad, which has also introduced hospital or relief cars into the railroad service.

Mexico.

—

Capital:
CITY OF MEXICO.

Under the present Constitution, which bears date of February 5, 1857, Mexico is a federative republic. It was originally divided into nineteen States, but at this time there are twenty-seven, with two Territories and the Federal District, and, while each manages its own local affairs, they are bound together as an inseparable body by the constitutional laws. The form of government in Mexico is broadly similar to that of the United States, the executive vesting in a President, who is elected for a term of four years, and who is assisted by a Cabinet, while the legislative power is conferred upon a Congress, which is composed of two Houses—a Senate and a House of Representatives. The President may serve any number of terms, and the present Executive, General G. Porfirio Diaz, is now in his sixth term, as he had already served five four-year terms when he was inaugurated December 11, 1900.

Under the direction of the President and a Council the administration is carried on by the Secretaries of State in charge of the following portfolios: Foreign Affairs, I. Mariscal; Interior, M. Gonzalez Cosio; Justice and Public Instruction, Just. Fernandez; Agriculture and Colonization, Leonardo Fernandez; Finance, J. I. Limantour; Communications and Public Works, F. Z. Mena; War and Navy, Bernardo Reyes.

The Senate consists of fifty-six members, two from each State, who must be at least thirty years of age. They are elected by the ballots of all respectable males and serve for a term of two years. Representatives must be twenty-five years of age. They are elected for an equal term with the Senators and in a similar manner. The President is elected by electors popularly chosen at a general election.

There is no State religion in Mexico, and all religious sects are equal before the law. The prevailing religion, of course, is Roman Catholic, but no ecclesiastical body can own realty, and since 1863, when all the churches were closed and the lands confiscated, many of the buildings have been assigned to serve as hospitals, schools, etc.

Primary education, which is free and compulsory, is chiefly carried on at the expense of each State, although the Government assists with frequent grants. In 1900 the number of schools supported by the Federal and State authorities was 6,532, and by the municipalities 2,872, in which there were 15,505 teachers and 703,639 enrolled pupils. In addition there were 2,710 private and clerical schools, in which 146,709 pupils were enrolled. Higher education, which is chiefly free, is carried on in secondary schools and seminaries, while there are also colleges for professional instruction, including law, medicine,

mining, engineering, agriculture, commerce, music and the arts and trades. About 21,000 pupils were reported as being in attendance at these schools in 1900.

The judicial power in Mexico is entirely distinct from that of the executive. It includes a Supreme Court, consisting of fifteen judges, who are chosen for a term of six years; Circuit Courts, with three judges, and District Courts, with thirty-two judges.

The chief sources of Mexican revenue are the internal taxation and the customs, less than 15 per cent being obtained from other sources.

Agriculture is quite largely pursued in Mexico, but in a primitive manner. The principal crop is wheat, although great numbers of cattle are raised to be shipped to the United States. The minerals found throughout the country make mining a very important industry to Mexico, nearly all the valuable metals being found in working quantities. The total value of the imports during the year 1901-02 was $64,656,349 (Mexican), while the exports during the same period amounted to $156,168,146.

President Diaz.

Area and Population.—The area and population of Mexico, according to the census of 1900, are as follows:

State or Territory.	Area in Sq. M.	Population.	Governor.
Gulf States:			
Tamaulipas ...	32,128	218,948	P. Arguelles.
Vera Cruz.....	29,201	960,570	T. E. Dehesa.
Tabasco	10,072	158,107	A. Bandala.
Campeche	18,087	84,281	J. Castellot.
Yucatan.....	35,203	312,264	O. Molina.
Totals	124,692	1,734,170	
Inland States:			
Chihuahua	87,802	327,004	M. Ahumada
Coahuila	63,569	280,809	M. Gomez Cardenas
Nuevo Leon....	23,592	326,940	Manuel G. Ritvero,
Durango	38,009	371,274	J. Santa-Marina.
Zacatecas	24,757	462,880	G. G. Garcia.
San Luis Potosi	25,316	582,486	B. Escontria.
Aguascalientes .	2,950	101,910	C. Sagredo.
Guanajuato ...	11,370	1,065,317	J. O. Gonzales.
Queretaro	3,556	228,489	F. Gonzales.
Hidalgo	8,917	551,817	P. L. Rodriguez.
Mexico	9,247	924,457	J. V. Villada.
Federal District	463	540,478	R. Corral.
Morelos	2,773	161,697	M. Alarcon.
Tlaxcala	1,595	172,217	P. Cahuantzi.
Puebla	12,204	1,024,446	M. P. Martinez.
Totals	316,125	7,173,574	
Pacific States:			
Lower Calif'nia*	58,328	47,082	A. Sangines.
Sonora	76,900	220,553	R. Izabal.
Sinaloa	33,671	296,109	F. Canedo.
Tepic*	11,275	149,677	P. Rocha y Portu.
Jalisco	31,846	1,137,311	L. C. Curiel
Colima	2,272	85,026	O. de Lamadrid.
Michoacan	22,874	935,849	A. Mercado.
Guerrero	24,996	474,594	A. Mora.
Oaxaca	35,382	947,910	E. Pimentel.
Chiapas	27,222	363,607	R. Pimentel.
Totals	324,768	4,637,718	
Islands	1,420	.....	
Grand totals..	767,005	13,545,462	

*Territories.

The population of the chief cities, according to the census of 1900, is as follows:

City	Population.	City	Population.
Mexico (capital)....	344,721	Morelia	37,278
Puebla	93,521	Oaxaca	35,049
Guadalajara	101,208	Orizaba	31,512
San Luis Potosi. .	61,019	Aguascalientes	35,042
Leon	58,426	Saltillo	23,996
Monterey	62,266	Durango	31,092
Pachuca	37,487	Vera Cruz..	24,085
Zacatecas	32,836	Toluca	25,904
Guanajuato	41,486	Acanceh	22,919
Merida	24,620	Calaya	21,245
Queretaro	33,152	Zopotlanejo	20,270

Events in 1903.—The currency question has been the dominant theme in business and financial circles in Mexico during the year, and it is the general opinion that some action will be taken that will give greater stability to the silver coinage of the country. It was in line with this effort that Mexico joined with China in a petition to President Roosevelt asking the co-operation of the United States in such measures as would tend to restore and maintain a fixed relationship between the moneys of the gold standard and the silver using countries. In pressing this matter with so much vigor the Government has the hearty support not only of her own financiers, but of the Americans, whose investments in that country now exceed $500,000,000; for while silver is the natural Mexican coin, and any step to displace it would probably meet with an unconquerable opposition, a revision of the monetary system to provide for money at such a fixed stable value as to place the republic on a level with the other great nations of the world seems inevitable.

Politically little of moment occurred during the year. The re-election of President Diaz was a foregone conclusion, and although some few riots occurred during the heat of the campaign, the general policy of the republic underwent no change. In the matter of national improvement, however, the country made some gigantic strides. Permission was granted for the construction of a new railway to extend down the Gulf coast from Matamoras, situated opposite Brownsville, Texas, to Tampico, a distance of about 200 miles. On April 16 the first section of the Kansas City, Mexico & Orient Railroad, running from the port of Topolobampo, on the Pacific coast, to Fuerte, a distance of about 70 miles, was opened to traffic, while the construction of the road between Chihuahua and the Rio Grande border is almost completed. The branch lines constructed by the Mexican National Railway also represent an expenditure of nearly three-quarters of a million dollars.

In mining interests Mexico also developed considerable progress. A phenomenally rich strike of gold in the Parral district and the discovery of what is regarded as one of the most extensive and richest beds of copper ore in the world have attracted widespread attention. During the month of April the government also granted concessions for the quarrying of lithographic stone, and an American company has purchased the Popocatapetl volcano at a cost of $5,000,000 in order to mine the immense sulphur deposits in its crater.

The year 1903 will be memorable in Mexico because of the number of calamities which have occurred. Both yellow fever and the plague have visited the country, causing hundreds of deaths wherever they have appeared, while the wheat famine became so great during the early months of the year that the Federal Government compelled all railroads running from the United States border to reduce the freight rates on grain to an extent of nearly 40 per cent. The eruption of Mount Colima caused great damage, although but few lives were lost. The volcano was more active than ever before, however, and the first eruption was preceded by an earthquake which destroyed houses in many towns. In August a terrific tropical hurricane, which swept over eastern Mexico, left vast amount of destruction in its path.

The transformation of Vera Cruz harbor from a dangerous roadstead into a safe port was an event that was of the utmost importance to the commercial world, while the coming of the Boer colonists, who are to occupy 83,000 acres of ranch land on the Conchas River, and the establishment of another large Mormon colony in the State of Tabasco, will open large areas of unemployed land to cultivation.

The only serious disturbance reported was a battle between the Federal troops and the Maya Indians, in which General Pat, the famous Maya chief, was killed, and Yam and Victorio, two other chiefs, were mortally wounded. During the year an experiment was made in the Sunday closing of barrooms, which resulted quite successfully, and on April 21 President Diaz issued an order providing that prize fights may be held in any State in the republic, so long as the consent of the Governor of that State is secured.

The budget estimates for the year ending June 30, 1903, were as follows: Revenue, $64,823,600; expenditure, $64,738,816. One of the largest items in the annual statement of expenditures has long been that of the public debt. In 1902 the outstanding gold debt amounted to $111,623,400. In 1901 the internal debt amounted to $135,509,271 (Mexican), while the floating debt was $1,296,965 (Mexican).

Michigan.

Capital:
LANSING.

Michigan has an area of 57,530 square miles, and by the census of 1900 had a population of 2,420,982. The discovery and early settlement of Michigan were due to the early fur traders and missionaries. The site of Detroit was first visited in 1610, and in 1641 some French Jesuits reached the Falls of St. Mary. The first European settlement within the territory was the mission at Sault Ste. Marie, which was founded by Father Marquette in 1668. Fort Mackinaw was established three years later, and in 1701 an expedition under Antoine de la Mothe Cadillac founded Detroit. The country came under the dominion of Great Britain in 1763. Shortly after this an Indian insurrection broke out, headed by Pontiac, and an attempt was made to exterminate the white settlers. At the close of the Revolutionary War Michigan was not at first ceded with the other part of the territory along the Lakes, and the Americans did not occupy Detroit until 1796.

At first Michigan was included in the government of the territory northwest of the Ohio, and later it formed part of the territory of Indiana. In 1805 it was made into a distinct Territory, William Hull being the Governor. During the War of 1812 Michigan was exposed to much suffering. Detroit was taken by the British in 1812, and in 1813 Mackinaw and Frenchtown were captured and the people massacred by the Indians. The British were soon after driven out of the territory, and in October, 1814, a treaty of peace was concluded with the Indians. In 1819 Michigan sent her first delegate to Congress. In 1835 a convention at Detroit formed a constitution by which Michigan claimed a strip of territory also claimed by Ohio, and a conflict seemed inevitable, but in 1837 Michigan was admitted into the United States on condition that she relinquish her claim to this territory. On March 16, 1847, the seat of government was removed from Detroit to Lansing. The manufacture of lumber and timber products is the most important in the State, though there has been a decline in this during the past few years owing to misuse of the forests. In the manufacture of furniture Michigan stands near the head of the list in the United States.

Governor Aaron T. Bliss.

Events in 1903.—The Republican State Convention met at Detroit on March 6 to nominate candidates for Justice of the Supreme Court and Regents of the State University. Judge Frank A. Hooker, of Charlotte, was nominated for the first office against seven candidates, and Peter White, of Marquette, and Loyal E. Knappen, of Grand Rapids, were nominated for Regents. The convention passed a resolution reaffirming allegiance to the principles and policies of the Republican party and indorsing the administration of President Roosevelt. Elections were held on April 6. Besides the State offices municipal offices were to be filled in most of the cities. The Republicans carried the State ticket by about 35,000 majority, and in municipal affairs a gain for this party was shown.

Minnesota.

Capital:
ST. PAUL.

Minnesota has an area of 19,997 square miles, and by the census of 1900 had a population of 1,751,394. Minnesota is of comparatively recent settlement, although it was long the seat of Indian trading. In 1680 Hennepin and La Salle, and later La Hontan and Le Seur, entered the region and made some explorations. During the eighteenth century several attempts were made at forming posts within the territory, and in the early part of the nineteenth century extensive explorations were made by Pike, Long, Schoolcraft, Nicolet, Owen and others. It was not until 1812 that the United States had any authority within the present limits of Minnesota. In 1816 a law was passed forbidding foreigners from trading with the Indians, and the military post of Fort Snelling was established in 1819. In 1837 a small tract of land between the St. Croix and Mississippi rivers was ceded by the Indians to the United States and some lumbering operations were commenced on the St. Croix.

The Territory of Minnesota was established March 3, 1849, and a government was organized in June. At that time the western boundaries extended nearly to the Missouri and White Earth rivers. The civilized population was made up almost entirely of the few white settlers around the trading posts and mission stations. In 1851 the Sioux ceded to the whites all their lands in the territory west of the Mississippi to the Big Sioux River. Population increased rapidly after this, and in 1857 application was made for admission into the Union. At the convention meeting to form a constitution a dispute arose and caused a division which promised to hold up the chance of Statehood for a time. A compromise was effected, however, and Minnesota was admitted to the Union May 11, 1858. During the Civil War Minnesota furnished 25,034 equipped men to the Union army and navy. The great development of Minnesota manufactures is due largely to the many tracts of white and Norway pine, to the extensive wheat fields and to the State's favorable position for the transportation of products. The most important industry is flour and grist milling, the State leading all others in the value of these products. Minneapolis is the centre of the flour and mill industry.

Samuel R. Van Sant.

Events in 1903.—The State Legislature unanimously adopted a resolution asking Congress to call a convention for the purpose of amending the Constitution so as to provide for the election of Senators by popular vote. On February 17 a bill was introduced into the Legislature to prohibit the repeated publication of murders or other crimes and prescribing that the facts shall be stated only once and without headlines. Subsequent allusions to the crime should be punishable by a fine of $100. The bill was not passed. Another bill of a radical nature that failed of passage made it unlawful for one person to kiss another unless he can prove he is free from contagious or in-

fectious disease. A weak heart was made to constitute a bar to the indulgence of kissing. Violation of the law, had it become such, would have been accounted a misdemeanor, punishable by a fine of from $1 to $5 for each offense. A proposition was made to Wisconsin to cede to that State part of the town of La Crescent in Houston County on condition that Wisconsin cede to Minnesota a part of the county of Pierce. The two portions are on islands in the Mississippi. La Crescent, Minn., is opposite La Crosse, Wis., and that city would make an island park of the land ceded, while Red Wing, Minn., would do likewise with the portion of Pierce County whose exchange was desired.

A. A. Ames, former Mayor of Minneapolis, who was indicted in 1902 on the charge of bribery, was tried in May, convicted and sentenced to six years in the penitentiary.

Mississippi.

—

Capital:
JACKSON.

Mississippi has an area of 46,919 square miles, and by the census of 1900 had a population of 1,551,270. The first Europeans who traversed the region which is now Mississippi were De Soto and his companions. They made no settlements, and the death of the leader, in 1542, put an end to the expedition. In 1682 La Salle descended the river and took possession of the adjacent territory in the name of the King of France, calling it Louisiana. In 1698 Iberville continued the colonization of the territory, under authority of France. In 1699 he erected a fort at Biloxi, and in 1716 Fort Rosalie was established at the site of Natchez. New Orleans was founded soon after, and attracted many of the settlers who came to the new country, leaving the growth of the interior to proceed but slowly. In 1728, 1733 and 1752 the colonists suffered much from the raids of hostile Indians. April 7, 1798, the Territory of Mississippi was organized by an act of Congress, and was bounded then on the north by a line drawn east from the mouth of the Yazoo River to the Chattahoochee, east by the Chattahoochee, south by the thirty-first parallel and west by the Mississippi River. In 1804 the region north of these limits and south of Tennessee, which had been ceded to the United States by Georgia, was added, the Territory then comprising the whole of the States of Alabama and Mississippi. Alabama Territory was formed March 3, 1817, and on June 10 of the same year Mississippi was admitted to the Union as a State.

Gov. J. K. Vardaman.

On November 29, 1860, a special session of the Legislature was called by the Governor, and on December 10 an election was held for delegates to act in convention upon the Ordinance of Secession. The ordinance was passed by a vote of eighty-four to fifteen on January 9, 1861, and on March 30 of the same year the Constitution of the Confederate States was ratified. During the Civil War parts of the State were scenes of active fighting, the most important battles being those at Corinth, on October 3 and 4, 1862, and at Vicksburg, on July 4, 1863. At the close of the war reconstruction troubles disturbed the State, and an unsettled condition continued until 1870, when Mississippi was readmitted to the Union and civil authority fully restored.

Events in 1903.—The State was stirred and the political issues of the gubernatorial campaign were changed by an incident which occurred in connection with the post office at Indianola, a small town in a rural district of the State. A Mrs. Cox, a negress, had been appointed postmistress late in 1902, and opposition began to develop at once. So strong did the opposition become that Mrs. Cox resigned her post on December 4 in order to avoid trouble. President Roosevelt then declared the post office at Indianola discontinued. At the opening of the political campaign there had been no desire or intention of giving the race question prominence, but the Indianola affair completely changed the situation and even the candidates. The matter seemed to be viewed as an exposition of the attitude of the President upon this question, and many of those who had been in favor of the Administration changed their views at once. The first nominations under the new primary law were held in August. The law provides for the direct nomination of all candidates from Governor and United States Senators down to constable, the framing of all platforms and the decision of all questions. Candidates announce themselves as such or have their friends announce them. Campaign work is done by "stumping" the State or county, holding individual meetings and delivering addresses to those who will come to hear.

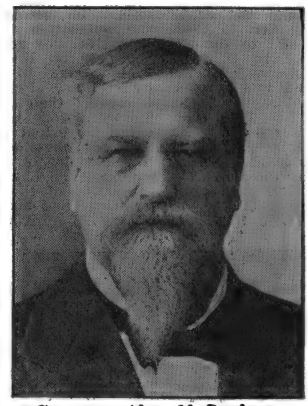
Major James K. Vardaman announced himself as a candidate for Governor on a reactionary anti-negro platform, declaring that if the people would elect a friendly Legislature he would see to it that such a division was made of the school funds as would save the State from the so-called danger of the educated negro.

At the first primary there was no choice, and a second was held on August 27, the opponents being Vardaman and Critz. Vardaman was nominated by about 8,000 majority, and his nomination was equivalent to an election.

The floods in March caused much damage to land lying along the Mississippi, and the cities were in danger from breaks in the levees. On January 29 the Yazoo Canal was opened, restoring to Vicksburg the water front it lost during 1876, when the Federal Government attempted to dredge a canal through six miles of forest, tapping the Yazoo River above that city and diverting the flow of the Mississippi.

Missouri.

—



Capital:
JEFFERSON CITY.

Missouri has an area of 68,431 square miles, and by the census of 1900 had a population of 3,106,665. Missouri formed a part of the Louisiana Purchase of 1803, and was contained in that section known as Upper Louisiana. As early as 1720 the lead mines of the State had begun to attract attention, and in 1755 Ste. Genevieve, its oldest town, was established. In 1762 France ceded to Spain the territory west of the Mississippi and the portion east of that river to England. Lands were granted liberally to colonists, and numerous emigrants from Spain flocked into the country. In 1775 St. Louis, originally a depot for fur traders, contained 800 inhabitants, and Ste. Genevieve about 460. At this time Spain entered into contest with England, siding with the colonies. In 1783 the general peace put an end to hostilities. In the division of the Louisiana Purchase Missouri was included in the District of Louisiana, which

was, in 1805, erected into the Territory of Louisiana, with St. Louis as the seat of government. In 1812, on the admission of the present State of Louisiana to the Union, the name of the Territory was changed to Missouri and its government made representative. In 1810 the population numbered about 21,000, all but about 1,500 of whom were settled within the present limits of Missouri. Immigration from the East began to come in rapidly, and in 1817 the population was 60,000, St. Louis having 5,000 inhabitants. A State Constitution was formed in 1820, and in 1821 Missouri became a State by proclamation of the President.

January 16, 1861, a bill was presented to the Legislature calling for a convention to act upon the Ordinance of Secession. The convention was held at Jefferson City, moving to St. Louis in February and March, but no measures of importance passed, so strong was public opinion against secession. On June 12, some minor conflicts having occurred, the Governor called 50,000 of the State militia to protect the State from invasion. Federal troops were at once sent into the State and the militia was defeated, the State coming under Federal control. On August 5 Governor Jackson, declared out of office by a convention, issued a proclamation declaring the separation of the State from the Union. A number of engagements were fought between the Federals and Confederates, and at the beginning of 1862 half the State was in control of Confederate troops. In the Summer of 1863 the State Convention, assembled to consider the Ordinance of Secession and kept intact by adjournment, passed an ordinance providing for the emancipation of all slaves in the State in 1870. A new State Constitution was framed in 1865 and ratified by the people. The Fifteenth Amendment to the Federal Constitution was ratified in 1869 by a large majority.

Governor Alex. M. Dockery.

Slaughtering and meat packing are important industries in Missouri, and the manufacture of tobacco ranks second. Flour and grist mill products have an important place, due to the extensive wheat fields.

Events in 1903.—The Legislature of 1903 passed several acts of importance. Among them were bills providing for the examination and licensing of plumbers and regulating sanitary construction of houses in the larger cities, reducing and fixing charges by railroads for excess baggage; authorizing Board of Railroad and Warehouse Commissioners to reduce, modify and fix all freight rates; the sale of or giving of cigarettes to minors under age of eighteen years declared a misdemeanor; making use of the flag of the United States, or any representation of such flag, for advertising purposes in any manner declared a misdemeanor; wearing emblem of any secret order without title to do so a misdemeanor; making property of person leaving State subject to execution; establishing a court for control and treatment of neglected, dependent and delinquent children; providing for the application of factory inspection law limited to cities of 30,000 inhabitants; declaring eight hours a day's labor in lead reduction plants; providing for examination as to practical and technical qualifications of coal mine inspectors, managers, foremen and others in charge; reducing taxation rate for State purposes from 25 cents to 18 cents on the $100 valuation—this to enforce provisions of amendment to constitution adopted in 1902.

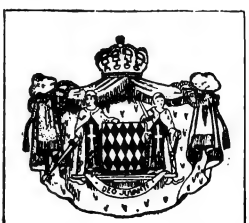
The Legislature submitted several amendments to the State Constitution, to be voted on at the general election of 1904. The more important are: The question of "initiative and referendum" in matters legislative; providing for free text-books for public school children; requiring railroads to issue transportation free to members of the General Assembly and State officers, and to levy a tax for a fund to erect a new capitol building. Also, a resolution was adopted urging a revision of the United States Constitution whereby United States Senators may be elected by direct vote of the people.

Following the boodle investigations and convictions in St. Louis, the discussion of the School Text-Book bill, up in the last house of the General Assembly, led to a demand for an investigation, and a committee of House members sat for eight days, but was unable to secure evidence that would convict. The committee recommended that the Cole County Grand Jury take the matter up. It did so. Lieutenant-Governor Lee confessed to matters which led to his resignation and the indictment of several Senators and two or three "promoters of legislation." One Senator has been tried on the charge of "soliciting a bribe" and convicted. The trials of three more Senators were set for November. Out of the 175 members of the two houses not more than nineteen or twenty were suspected of boodling.

On March 20 the Missouri Supreme Court found five large packing companies guilty of maintaining an unlawful combination to control prices of meat within the State, and issued an order of ouster prohibiting them from doing business in Missouri and an order to pay a fine of $5,000 each and costs of the proceedings. The order of ouster was to be held in abeyance if within thirty days they should accept the judgment and pay the fines. On April 10 the Master Plumbers' Association of St. Louis was declared illegal on the ground that it was a combination formed to maintain and monopolize the plumbing business of that city.

A suit is pending in the United States Courts to vitiate the charter of the Merchants' Bridge, claimed to have violated its charter by the disposal of a controlling interest in the bridge to the St. Louis Terminal Company, thereby permitting a monopoly of means of access to St. Louis from the East.

Much damage was caused in East St. Louis in the early part of June by the floods in the Mississippi River. East St. Louis received the water on June 7. At one time it appeared that the Eads Bridge, connecting St. Louis with the lesser city, would be destroyed. It was not until June 15 that railroad communication from the East was re-established. There were about thirty lives lost.



Monaco.

—

Capital:
MONACO.

Monaco has belonged to the House of Grimaldi since 968. In 1715 it passed to the female line, but at that time the Count of Thorigny, who married Louise Hippolyte, the daughter of Anthony I. and heiress to Monaco, assumed both the name and arms of the family. When his wife died, after she had reigned but a few months, he asserted his right to the throne and ruled over the principality under the name of Jacques I. He was succeeded by his son, Honorius III., who was forcibly deposed by the French Revolution in 1792. In 1814, however, the principality was re-established under the protection of the Kingdom of Sardinia.

The present reigning Prince, Albert I., was born November 13, 1848. He succeeded his father, Prince Charles III., September 10, 1889. He married, September 21, 1869, Lady Mary Douglas Hamilton, and on October 30, 1889, Alice, Dowager Duchess of Richelieu, both of whom were divorced. By his first wife he had one son, Prince Louis, who was born July 12, 1870.

The Roman Catholic Church is the only one which is allowed in Monaco. Over this a bishop presides. In 1819 the French codes were adopted and a Court of First Instance established. There is also a Judge de Paix's Court. The principality has its own coinage, which passes current in the countries which are affiliated with the Latin Union, as well as its own postage issue. As there are no lands to cultivate and practically no trades nor industries to pursue, the only revenue comes from

the gambling concessions, which at the present time yield more than $2,000,000 per annum. As the result nobody in Monaco pays any taxes, the Prince enjoys a handsome income, and the Cathedral, with its bishop and clergy, are well supported upon the proceeds of this unique industry. It was scarcely fifty years ago that Monaco was despairing and bankrupt. Then Francois Blanc took the half-built Casino, with its concession, and ever since then Monaco has been the most prosperous community in Europe. It has done nothing but draw upon the entire civilized world for its support. Some idea of the enormous income of the Casino may be gained from the fact that its direct expenses amount to more than $4,000,000 per annum. This includes nearly $3,500,000, which is the amount paid for the management and the 1,600 employes. The gardens cost $125,000, while it costs something over $200,000 to support the theatre and orchestra. About $125,000 is distributed to the press of Europe, presumably for incidental advertising, and some $60,000 are set aside each year to pay the travelling expenses of patrons who may lose so much money that they would otherwise be unable to leave Monaco. These are but the mere expenses of the Casino, however, the first charge upon the bank's winnings, but they are invariably met.

Prince of Monaco.

Then there are other charges. The public service, which includes the maintenance of roads, lighting, water, carnivals, races, pigeon shoots and many other amusements call for the expenditure of a considerable sum. The bishop, the clergy and the schools receive $45,000, and $100,000 is reserved for "bodyguard, police, law courts and government." At present the sum of $250,000 per annum is paid to the Prince of Monaco far the privilege of keeping the Casino open, and this amount is to be increased at stipulated periods until it reaches $500,000—in 1937. There it will remain until 1947, when the concession itself expires. In spite of this the balance available for dividends and interest in 1900 was $2,400,000, and as the capital of the company consists of 60,000 shares of a par value of $100 the amount distributed was at the rate of $40 per share.

American women were more in evidence at Monte Carlo at the opening of the past season than were the women of all other nationalities put together. Several reports published in April of persons breaking the bank at the Casino aroused interest as to such an event being possible. The Marquis Carlo di Rudini was credited with winning 400,000 francs at one sitting. Several Americans are said to have compelled the bank to suspend.

Montana.

—

Capital: HELENA.

Montana has an area of 146,080 square miles, and by the census of 1900 had a population of 243,329. In 1743 Chevalier de la Verendrye, with a party of French Canadians, entered Montana and discovered the Rocky Mountains, but made no attempt at settlement. The country came into the possession of the United States by the Louisiana Purchase of 1803. In 1804 and 1806 Lewis and Clark had exploring expeditions up the Missouri and across the mountains to the Pacific, crossing Montana twice. Alexander Henry, in 1808, led a party of fur traders into the Yellowstone country, and in 1806-1810 John Colter, of Lewis and Clark's expedition, engaged in hunting and trapping in the territory. Fort Union, the first permanent fort in Montana, was built in 1829 by Kenneth Mackenzie, and in 1832 the first steamer ascended the Missouri into Montana. Fort Benton was built in 1846 by Alexander Culbertson. In 1853-1854 Montana was explored by a scientific and military expedition sent out by Governor Isaac J. Stevens, of Washington Territory. The Gold Creek mines were discovered in 1862, and in the same year the development of the mines of Beaverhead Valley and Bighole River began. In 1864 Montana was organized as a Territory and Helena and Butte City were founded. From 1864 to 1879 there was war with the Sioux, Blackfeet and Cheyennes. In 1874 Helena was made territorial capital. The battle of Little Big Horn, when General Custer and his men were massacred, occurred in 1878. In 1881 the first railroad reached Helena, and in 1883 the Northern Pacific Railroad was completed to this point, relieving the financial distress. In 1889 Montana was admitted as a State. The Montana State University was opened at Helena in 1891.

Gov. Joseph K. Toole.

Events in 1903.—The House of Representatives of the Montana Legislature at its last session passed a law licensing gambling and making it a local option measure in small communities. For eight years previous gambling had been a felony in the State. What was considered the most important act of the Legislature was the passing of a measure known as the Fair Trial bill, providing that any litigant may, upon proper showing, have a judge from another district appointed to try his case where it appears that the judge before whom the action was pending is biased or prejudiced. The measure was introduced in the interest of the Amalgamated Copper Company, and was desperately fought by the Heinze people, against whom the bill was apparently introduced. Certain judges in Butte, it was claimed, had given uniformly favorable decisions to Heinze in litigation between Heinze and the Amalgamated, involving more than one hundred million dollars. Incidentally the litigation between these two resulted in a collision between miners employed by the two parties in a part of a mine awarded to the Amalgamated. The Heinze men took possession of the mine and were allowed to remain in spite of the Supreme Court decision giving the property to the Amalgamated company.

A joint resolution was passed by the Legislature asking Congress to take the necessary action toward a Constitutional amendment for direct election of United States Senators. Impeachment proceedings were taken up by the House of Representatives against Judge E. W. Harney, of the District Court of Silver Bow, for the commission of high crimes and misdemeanors. The House decided that there was not sufficient evidence to show cause for impeachment. The attempt grew out of the Heinze and Amalgamated Copper Company litigation.

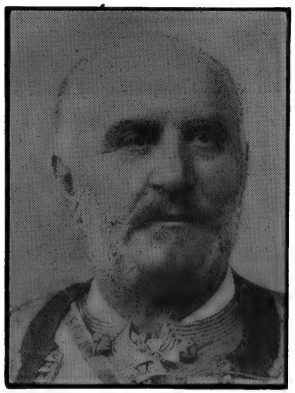
A rich gold-bearing sand was discovered in the old bed of the Missouri River, fifteen miles east of Helena, in March. It was necessary to tunnel for several hundred feet before the river bed was reached, and it was then found that the sediment was thirty feet deep and contained, besides gold, sapphires and rubies.

Several severe earthquake shocks were felt in the mountain regions on March 15, and it was said that

the rotunda of the State Capitol at Helena had been damaged. Cloudbursts in June destroyed much property, but no lives were lost. A heavy snow storm caused the death of many herds of cattle in May, and in September a storm of the same nature injured the standing wheat in southern Montana.

Montenegro.

—



Capital: CETTINJE.

The reigning power in Montenegro has remained in the family of Petrovic Njegos since 1697, when Danilo Petrovic, on being proclaimed Vladika, secured the liberty of the country from the Turks. He at once established himself as spiritual and temporal ruler, and the dual power descended collaterally until 1851, when Danilo I. (Kniaz and Gospodar), who had succeeded to the throne upon the death of his father, Peter II., abandoned both the title of Vladika and the spiritual functions which were attached to it and adopted in its stead the more humble title of Prince.

Nicholas I., the present ruler, was born October 7, 1841, and was proclaimed Prince of Montenegro as the successor to his uncle, Danilo I., August 14, 1860. In December, 1900, he assumed the title of Royal Highness. On November 6, 1860, he married Milena Petrovna Vucoticova (born May 4, 1847), the daughter of Peter Vukotic, Senator and Vice-President of the Council of State. They have had nine children.

The Heir Apparent. — The heir apparent to the throne of Montenegro is Prince Danilo Alexander, the eldest son of the reigning Prince. He was born June 29, 1871, and was married July 27, 1899, to Princess Jutta, daughter of the Grand Duke of Mecklenburg-Strelitz. They have had three children.

Prince of Montenegro.

The Ministry.—The Ministry of Montenegro is constituted as follows: Minister of Foreign Affairs, G. Voukovitch; Minister of the Interior, B. Petrovitch Niegoch; Minister of Justice, Count Vojnovic; Minister of War, J. Plamenaiz; Minister of Instruction and Worship, S. Popovitch; Minister of Finance, N. Matanovitch.

The Nation.—The independence of the limited monarchy of Montenegro has been recognized by all the signatory Powers of the treaty of Berlin since 1878. Both Austria and Russia contribute to its revenues. The power of the executive rests solely with the ruling prince, who is practically the dictator, as four of the eight members of the Council are personally appointed by him.

Almost the entire population of Montenegro profess the Greek orthodox faith, the dissenters being less than 30,000 in number, about half of whom are Mohammedans.

Education is both free and compulsory, and there are schools of higher education for girls as well as boys, a girls' high school being maintained at the expense of the Empress of Russia.

While agriculture is pursued, the work is done in a primitive manner, and practically the only manufactures that exist are for home consumption. Deposits of iron ore have been found between Antivari and Kliksic, for the working of which a concession has been granted to a foreign company.

Montenegro now has no commercial treaty with any country, and its customs tariff is at present 6 per cent ad valorem.

The exports for 1898, the last year for which any figures have been given, amounted to $491,650, while the imports for the same year were $590,345.

The budget for 1902 is the first budget issued since Montenegro became an independent State. This shows revenues and expenditures balancing at $564,000. The country has a public debt of about $450,000.

Morocco.

—

Capital: FEZ.

Little is known of Morocco, its people being fiercely opposed to the incoming of foreigners. The present Sultan, Mulai Abd el Aziz, born February 24, 1878, succeeded his father, Mulai Hassan, at the latter's death, June 7, 1894. He is the fifteenth of the Alides and the thirty-sixth in lineal descent from Ali, uncle and son-in-law of the Prophet. The Sherifian umbrella is hereditary in the family of the Filali Sharifs of Tafilet. Each Sultan is supposed, previous to his death, to indicate the member of the Sherifian family who, according to his conscientious belief, will best replace him. The succession is, however, elective, and all members of the Sherifian family are eligible. Generally the late Sultan's nominee is elected by public acclamation at noonday prayers on Friday after the Sultan's death.

The form of government is an absolute despotism, unrestricted by any laws, civil or religious. The Sultan has six ministers, those for Foreign Affairs, Home Affairs and War, the Chief Chamberlain, Chief Treasurer and Chief Administrator of Customs. There is also a Grand Vizier. These he consults or not, as he chooses. His income is estimated at $2,500,000 a year.

The imports in 1901 amounted to about $8,571,310, and the exports to about $6,589,835.

The area of Morocco can only vaguely be estimated, as the southern frontiers, toward the desert of Sahara, are unsettled. According to the most recent investigation, the area of the Sultan's dominion is about 219,000 square miles. The estimates of the population of Morocco vary from 2,500,000 to 9,400,000, but it is generally considered to be about 5,000,000. Another estimate gives the following result by races: Berbers and Tuaregs, 3,000,000; Shellah Berbers, 2,200,000; pure nomadic Bedouins, 700,000; Mued, 3,000,000; Jews, 150,000; negroes, 200,000. Some districts, including Tuat and other oases, claimed by the Sultan as part of Morocco, have recently been occupied by Algerian troops, but no definite boundary between Moroccan and French territory has been determined. The number of Christians does not exceed 6,000, and of these fully 5,000 are probably in Tangier. Much of the interior of Morocco is unknown to Europeans. Fez, the capital, has a population of about 140,000, and Tangier of about 30,000. Morocco City is the southern capital. The Sultan and his subjects are of the Malekite sect of Sunnite Mohammedans. The differences between sects are chiefly in the attitudes assumed during the recital of prayers.

The regular army consists of about 10,000 disciplined infantry, under the command of an Englishman, and 400 disciplined cavalry, a few batteries of field guns and 2,000 irregular cavalry. In addition to these there are about 8,000 militia cavalry and about 10,000 infantry. A small arms factory has recently been established at Fez, under the direction of two Italian army officers and an Italian civil engineer. The navy consists of two old iron screw ships and an armed cruiser built in 1890.

Events in 1903.—In 1894 a young man became Sultan of Morocco. His mother was a Circassian girl, an European Aryan, and the strain of Arab and Circassian is not good to hold the traditions of the country. The young man took for his adviser an infidel, a newspaper correspondent, and for the chief command of his army a Scotch lord, a soldier of fortune. He sought to advance his country in the lines his advisers suggested, but his people did not

wish their country advanced. So when, in 1902, a religious fanatic named Bou Hamara rose in the mountains and pretended to the throne of Morocco the people believed him and he found many followers.

This was the beginning of the rebellion which formed the only history of the country in 1903. The reigning Sultan ordered from the city of Fez all Europeans, sought to strengthen his cause by a reconciliation with his brother, who had been a prisoner of State, and looked to the standing of his army. The fierce men from the hills came down and burned villages, robbing the people, retreating when attacked and outnumbered, fighting when cornered. So there were periods of peace and war all through the Spring and Summer, victories of both sides, no positive advance made by either, and the people suffered. In September the Government made overtures to the rebels, offering them armistice if they ceased robberies and their threatening attitude. The Sultan, showing foresight, purchased an English country estate in March for a home in case of defeat. The purchase of an English estate by the ruler of another country is almost without precedent, and the act of the Sultan caused considerable comment. The purchase was made in the name of one of his British officers through a London agency. The estate is situated in Norfolk, not far from Sandringham Palace, and is described as being of the best type of English country manor and park. The Sultan has always shown an intense liking for anything foreign, and before the rebellion he had surrounded himself with machines and toys made in Europe. Anything out of the ordinary he welcomed with delight, and the men he liked best were those Europeans who could invent new forms of amusement for him. A correspondent for an English paper tells of a visit paid the Sultan at a time when a consignment of new bicycles had been received. The guest was entertained by being compelled to ride a wheel about a stony courtyard in company with the ruler and some of his ministers until all the machines were destroyed and the riders thoroughly bruised.

Sultan of Morocco.

In June the rebels, not content with disturbing the peace of their own country, crossed the frontiers into Algeria and attacked the French posts established there. On June 2 an engagement was fought in which the French were victorious. A punitive expedition was sent out on June 8 and the town of Zenaga was bombarded and partly destroyed.

Music in 1903.

TIBOR REMENYI.

The musical season of 1902-1903 has been very interesting, and will be, owing to the novelties introduced, epoch-making.

First of all, it was the last season of Grand Opera under the direction of Mr. Maurice Grau. Owing to indifferent health, Mr. Grau has been compelled to abandon the work which he has so masterfully conducted during the last thirteen years. For the first time also in many consecutive seasons we had opera without Plancon. Marcel Journet, the French basso, took his place, and very creditably. He won his public from the start. Calve and Melba remained away also, as did Jean de Reszke, who seems to have retired. What a pity that such artists must get old!

Otherwise we had many of the old favorites back, among them Edouard de Reszke, Anton Van Rooy, Emma Eames, Salignac, Campanari, Alvarez, Scotti, Bispham, Gadski, Marcella Sembrich, Nordica and the ever ready and indispensable little Bauermeister, one of the most accomplished of operatic artists, who can make so much of even the smallest role.

The new artists were Camille Seygard, who was heard in the roles of Margherita and Carmen; Mrs. Fritzi-Scheff, a delightful actress and clever singer; Georg Anthes, tenor, who was heard as Lohengrin, Meistersinger and in other Wagnerian roles, and Carlo Dani, the Italian tenor, whose voice is fresh and pleasing. Luigi Mancinelli and Phillippe Flon led the Italian and French operas, while Alfred Hertz directed the Wagnerian dramas.

One new opera was performed—"Der Wald," by Miss Smyth.

In the thirteen seasons of opera under Mr. Grau eight hundred performances have been given and thirty-five operas have been produced. The standard of artists, orchestra and scenery has always been of the highest, and the record established by Mr. Grau is absolutely unprecedented in the history of private and unsubventioned opera.

Pietro Mascagni, the Italian maestro, composer of "Cavalleria Rusticana," came over to conduct his operas and give concerts. But tangled finances impeded his otherwise artistically successful tour.

Many interesting recitals were given this season. In fact, there was hardly an afternoon when one could not enjoy a programme of varied music at Mendelssohn Hall.

Miss Susan Metcalf repeated her successes of last year. Mr. Francis Rogers, the barytone, covered himself with laurels. He gave a half dozen recitals in New York, singing an extended programme, comprising song literature of all times and all nations.

His intelligent interpretation and strong individuality have made him one of the foremost song singers. Ellison van Hoose, the eminent tenor, after many successful appearances, was called to Europe to fulfill opera engagements at the Theatre de la Monnaie, in Brussels. He had to return, however, for a few weeks in order to sing at the Worcester (Mass.) Festival.

One cannot speak of Francis Rogers and Ellison van Hoose without mentioning their teacher, Mr. Isidore Luckstone, whose extraordinarily strong artistic temperament and unusually extensive and comprehensive knowledge result in so many finished artists. Messrs. Saenger, Deal and Dossert and Mrs. Myers have also done excellent work with their pupils.

Mr. Dossert has been fortunate with his pupil, a young man, Francis Archambault, a French-Canadian, twenty-three years of age, who has a phenomenal basso-barytone voice. His successes have already been notable, and if promises are worth anything Mr. Archambault will soon be famous.

Mrs. Ruby Shotwell Piper, Mrs. Maude Fenlon Bollman and Mrs. Cecila Niles have sung with much success in many concerts all over the country. Mrs. Caroline Skelton, of Denver, who was discovered by Mr. Johnston, the manager, is the possessor of a beautiful high colorature voice and is soon to make her debut.

Mrs. K. J. Collins introduced the "national musical teas" given at the Gerrit Smith studios. This was a decided novelty. Three concerts were performed—one French, one Russian and one Hungarian. At the French concert Mr. Luigi von Kunitz, the violinist, played upon the viola d'amore, and at the Hungarian concert Mr. Desider de Nagy de Lazari was heard in his cimbalom selections. Among the artists who appeared at these concerts—which, it is hoped, will be continued next season—were Raoul Pugno, Marie Keller, Adrienne Remenyi, Bogea Onmiroff and S. M. Fabian.

Mr. Arnold and Mrs. Elodie Dolmetsch brought over with them a quantity of ancient instruments—some of them belonging to the piano family—upon which they played at their concerts. Hearing them, one felt as if living many, many years back. They played compositions by Domenico and Alessandro Scarlatti, Rameau, etc., on the lute, zither, viols and virginals, viola d'amore, viola di gamba and harpsichord. Now that we have heard them, a visit to the room in the Metropolitan Museum of Art where are exhibited all these old and quaint instruments is no more meaningless. We know what delightful music can come out of these odd instruments.

The Philadelphia Orchestra (Fritz Scheel, director), Boston (W. Gericke, director), Cincinnati (Van Der Stucken, director) and New York Philharmonic (Walter Damrosch, director) orchestras have maintained their standard of excellence.

The Kneisel Quartet remains the foremost quartet organization in America.

The Philadelphia Orchestra gave a Beethoven festival, consisting of five concerts (preceded by a lecture by the noted critic, Mr. H. E. Krehbiel), at which Beethoven's nine symphonies and many of his overtures, besides his concertos for solo instruments, were performed. Enough praise cannot be bestowed upon a work of this kind. The concerts were given in Philadelphia between March 20 and March 26, and afforded opportunity to hear in a few days what one may with the greatest difficulty succeed in hearing in a number of years of travel. One must not forget that within the last forty years Beethoven's Ninth Symphony has not been played in New York more than four times and that its choral part has generally been omitted!

France sent us two pianists. Raoul Pugno returned after several years' absence, a more finished artist than before, and was deservedly successful. Mrs. Roger-Miclos arrived just after Mr. Pugno had left and was well received.

After the "Paderewski" triumphal reception of Kubelik last year it was indeed a difficult task for a violinist to make a bid for public favor; yet Kocian, eighteen years old, a pupil of Sevcik, Kubelik's teacher, attempted the feat and came out

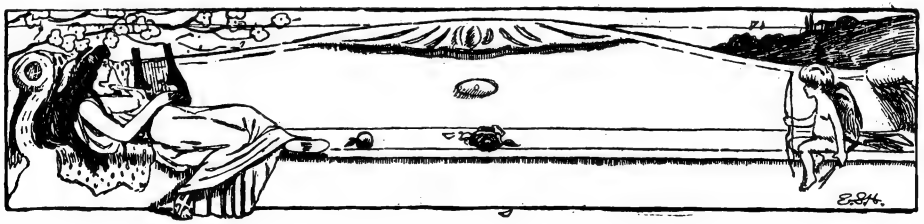
creditably, leaving a favorable impression. But in Hugo Heermann we had the rare privilege of hearing a violinist of uncommon ability and great depth, a true exponent of classical music.

Two new orchestra conductors appeared on the musical horizon and are now steadfastly fixed over us: H. H. Wetzler and J. S. Duss. Mr. Wetzler is a profound student and a skillful reader of Richard Strauss's music. His orchestral concerts have gained him immediate favor. Mr. Duss is indeed a successful and enterprising man. In April he conducted the Metropolitan Opera House orchestra, making an extended tour with Nordica and Edouard de Reszke. On May 31, 1903, he opened brilliantly "Venice in New York." His idea of transforming Madison Square Garden into a miniature but vivid reproduction of Venice, with canals, gondolas and Venetian singers, was certainly original and attractive. There is no doubt that the charming scenery, coupled with the strains of his orchestra, helped many New Yorkers to pass agreeably otherwise unbearable torrid Summer nights.

Outside of the German singing societies, the Arion and the Liederkranz, the sangerbunds and liedertafls so numerous throughout the middle West, and which are a very potent influence toward a better knowledge of good music, most of the musical club work is in the hands of women who in the past ten years have done wonderful things for musical advancement. From Mrs. Collins, president of the National Federation of Women's Clubs, the information is obtained that there are about 125 musical clubs in the federation, with an annual increase of clubs of about 15 per cent. Most of these clubs contain choruses, some of which attain considerable proficiency, and all are for the creation of a general demand for better things musically, a more intelligent appreciation of them, closer study and analysis, and so tend to the development of keener thought.



In church work—Protestant—the opinion prevails that the tendency is toward chorus choirs, vestments and a liturgical form of service. The tendency has become very much more marked lately. It has also led to a much wider demand for a different sort of music in the churches from the styles that have prevailed for so many years—viz., arrangements from operas, secular songs and the like; things good in themselves, but lacking that indefinite but very necessary something that would make them devotional.

To sum up, the musical season has been full of interesting and noteworthy events and replete with brilliant promises. With rapid strides music is becoming more and more an educational agent, a household word in America. The work of such men as Frank Damrosch, with his choral and oratorio societies, and of Mr. Ahrens, with his People's Symphony Orchestra, and of the several musical clubs has done much toward that end. The public taste is eminently good now. The opera we have is a proof of it. We would not stand for such poor operatic performances as are witnessed in Paris, for instance. We want the best and generally get it, and shall continue to do so. What we lack yet is a great American composer.

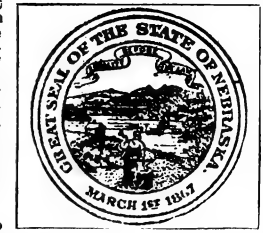
The day is not far distant, let us hope, when we shall have an American composer whose originality in conception and boldness in execution, which are the characteristics of American genius, will entitle him to a place in the Hall of Fame beside Edgar Allan Poe, the poet, and George Inness, the painter, and who will transmit to posterity that spirit of liberty and that rejection of fettering, narrow traditions, those two qualities which are so prominent in all standard American works of art.

The following is a list of some of the compositions played for the first time in America during the season 1902-1903:

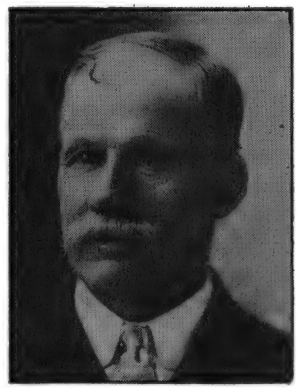
Title of Composition.	Composer.	Performed by
Symphonic Poem, Legende Celeste	P. A. Tirindelli	Cincinnati Symphony Orchestra.
"Der Wald" (opera)	Miss Smyth	Metropolitan Opera Company.
Concerto for Violin	Richard Strauss	Hugo Heermann.
"Dream of Gerontius" (oratorio)	Edgar Elgar	Frank Damrosch (leader).
Requiem (oratorio)	Georg Henschel	Georg Henschel (leader).
Brandeburg Concerto Grosso, for violin, flute, oboe and trumpet	J. S. Bach	Boston Symphony Orchestra.
String Quartet	Chausson	Kneisel Quartet.

Nebraska.

Capital:
LINCOLN.



Nebraska has an area of 76,777 square miles, and by the census of 1900 had a population of 1,066,300. The Territory of Nebraska was formed May 30, 1854, and at that time contained 351,558 square miles, extending from 40 degrees north latitude to the Canada boundary, and from the Missouri River to the crest of the Rocky Mountains. On February 28, 1861, 16,035 square miles were set off to Colorado, and on March 2 of the same year 228,907 square miles were given for Dakota. At the latter date Nebraska received from Washington and Utah a tract of 15,375 square miles lying on the southwest slope of the Rockies, giving to the State its present boundaries.



In March, 1860, a plan of State government was submitted to the people, but was disapproved. On April 19, 1864, an enabling act was passed by Congress, providing for the admission of Nebraska to Statehood, but the action necessary for admission was not taken by the people at that time. In 1866 the Territorial Legislature formed a Constitution which was ratified on June 21 of that year. The first Legislature under the new government convened July 4. On July 28 a bill for the admission of Nebraska as a State was passed by Congress, but did not receive the signature of the President. In January, 1867, another bill was passed and was vetoed by the President. The bill was passed over the veto, however. This act contained a provision that the new State should not deny the right of suffrage on account of race or color, except in the case of Indians not taxed. This was ratified by the Legislature at Omaha February 20, and the compliance with the Congressional conditions was proclaimed by the President. Lincoln was chosen as the seat of government shortly after this.

Slaughtering and meat packing are the principal industries of the State, and South Omaha is now considered one of the great cattle markets of the world. Factory manufacture of butter, cheese and condensed milk forms an attendant industry. The lack of cheap fuel has long hindered the State's development in manufacturing lines, though ease of transportation has been a stimulating factor. Omaha is the centre of the printing and publishing trade of the Middle West.

The crop acreages in Nebraska in 1902 were as follows: Corn, 7,817,962 acres, 252,520,173 bushels; Winter wheat, 1,895,362 acres, 43,972,398 bushels; Spring wheat, 629,788 acres, 874,053 bushels; oats, 1,795,422 acres, 62,121,601 bushels; rye, 160,139 acres, 3,250,822 bushels; hay, 556,398 acres, 968,133 tons. The year ending December 31, 1902, showed the largest stock market business in the history of the State. Receipts for sheep showed an increase of 430,000 over 1901, but the receipt of hogs was below the average. The Omaha Packing Company has recently added a $1,000,000 beef plant to its business.

Events in 1903.—One hundred and seventy-four bills were passed at the last session of the Nebraska Legislature, and most important among them was a new revenue law, formed to increase the income of the State. This bill changed the existing revenue law to provide for the valuation of property at its actual value and assessment at one-fifth, for the election of county assessors, to be subject to the State Board of Equalization, and to provide new methods of taxing insurance companies and for assessing the franchises of franchise corporations. A resolution was passed calling for a constitutional convention in reference to the election of Senators by direct vote. The total appropriations for the year amounted to about $3,600,000, of which $666,000 was for buildings and other permanent improvements. Legislation of less importance concerned bills for new qualifications for attorneys; for the extermination of prairie dogs; prohibiting the docking of horses' tails, making this punishable by a fine of not less than $100.

Gov. John H. Mickey.

Municipal elections were held throughout the State in April and May. In Omaha, where a strong effort was being made to elect an independent candidate for Mayor, nominated by the Omaha Business Men's Association, the Republican candidate was chosen by about 1,000 majority. The Democratic State Convention met at Columbus on August 25. A fusion ticket of Democrats and Populists was nominated, the offices to be filled being one Supreme Court judge and two regents of the university. Resolutions were passed reaffirming the Kansas City platform of the National party.

On May 15 Governor Mickey aroused considerable comment by his statement that a number of attempts had been made to bribe him. He refused to name any particular case, and it was said that the charge was made in order to rid himself of a number of undesirable office seekers who were willing to offer bribes.

Ice gorges in the Platte River caused serious floods in central and southern Nebraska in March. A tornado that struck the towns of Norman and Pauline, on May 25, caused the deaths of several persons, and much damage to property. State and Federal aid was asked in September to provide means of stopping the ravages of the Missouri River, which was cutting into the farms along its banks.

Within a year nearly $1,000,000 worth of fine land disappeared down the stream. The trouble is an old one—of the Missouri River trying to return to its old channel, which it left in 1880, at which time the current changed several miles eastward, flowing close to the hills on the Iowa side. Several million dollars have been spent by the Missouri River Commission in building dikes in the vicinity of Omaha, in an effort to hold the river to its course. In 1896 a costly dike was built about a mile above the point where the river is now cutting in, but it held the stream only one year.

Nepal.

Capital:
KATMANDU.

Nepal is an independent kingdom in the Himalayas, with an area of about 54,000 square miles and a population variously estimated at from 2,000,000 to 5,000,000. The Government is a military oligarchy, all power being in the hands of the Prime Minister, to whom it was delegated by the Maharajah Dhiraj when he came of age, in 1896, he having succeeded his grandfather, May 17, 1881, when he was but six years old. The country has paid tribute to China since 1791. A frontier outrage in 1814 led to war with Great Britain, but peace was declared and a treaty signed December 2, 1815, since when the relations of the country with the British have been friendly. An English resident lives at the capital, but does not interfere with internal affairs. The religion is Hindooism of an early type. There is a standing irregular army of about 25,000 men, with a force of 17,000 regulars stationed at the capital. During the Indian mutiny a detachment of Gurkha troops was sent to assist in suppressing the rebellion in Oudh. The races of Nepal, besides the dominant Gurkhas, include earlier inhabitants of Tartar origin, such as Magars, Guarangs, Newars and Bhutias. The principal articles of export are cattle, hides and skins, opium and other gums, grain, spices, tobacco and timber. The chief imports are cattle, sheep and goats, spices, sugar, cotton, silk, cotton and woollen goods. The Indian rupee passes current throughout the country, though Nepal has a currency of its own in silver and copper.

Netherlands (The).

Capital
THE HAGUE.

The reigning family of the Netherlands is the House of Orange, which was established by Count Walram, a German, in the eleventh century. Through the marriage of Count Englebrecht with Jane of Polanen, in 1404, the Barony of Breda passed into the hands of the family, which at that time settled in the Netherlands. Other successful matrimonial alliances, including that of Willem III. of Orange with a daughter of King James II. of Great Britain, added to the wealth and strength of the family, and it held its position until 1795, when Willem V. was compelled to seek safety in England at the invasion of the French army. In 1813, however, the family returned, and after much diplomatic negotiation the Kingdom of the Netherlands was erected, with the son of the late Stadtholder as hereditary sovereign. As the result of this action Willem I. assumed the throne on March 15, 1816. In 1840 he abdicated in favor of his son, who, after a reign of nine years, bequeathed the throne to his heir, who reigned as Willem III. for forty-one years, when he died (1890), and, in default of male heirs, was succeeded by his daughter, Wilhelmina.

Queen Wilhelmina was born August 31, 1880. Although she succeeded to the throne at the time of her father's death, she was not inaugurated until September 6, 1898. On February 7, 1901, she was married to Prince Henry of Mecklenburg-Schwerin.

The Heir Apparent.—The direct heir to the throne is the reigning and unmarried Grand Duke of Saxe-Weimar, whose grandmother, the late Princess Sophia, was the sister of the late King Willem. As his acceptance of the dignity would require the surrender of the grand ducal throne which he now occupies, it is a question if he would consent to make the change, in which case the legal heir would be Princess Marie of Reuss (born January 20, 1849), the wife of Prince Henry VII. of Reuss, and daughter of the late Duke of Saxe-Weimar. They have four children—Prince Henry XXXII., born March 4, 1878; Prince Henry XXXIII., born July 26, 1879; Princess Sophie, born June 27, 1884, and Prince Henry XXXV., born August 1, 1887.

Queen of the Netherlands.

Religious liberty is complete and constitutionalally guarded in the Netherlands. The majority of the population, including the royal family, are members of the Reformed Church. Public instruction has been compulsory between the ages of six and thirteen for nearly one hundred years.

No juries sit in the Netherlands, justice being administered in 106 cantonal courts, twenty-three district courts, five courts of appeals and one of cassation, the high court of the nation. The country is defended by an extremely small number of fortresses, but by piercing the dikes nearly all the approaching roads can be flooded, while those that are on high ground are well protected by the existing fortifications.

Although the manufactures of the Netherlands are inconsequential, its agricultural interests are of great importance. These include, besides cereals and garden products, tobacco, madder, flax, bulbs, shrubs and trees. The tulip industry is world-famous.

As the Netherlands is a free-trade country, few duties are levied, and these have a fiscal, not a protectionist character. No official return is kept of the value of the general trade, but the following are the best obtainable estimates of the commerce of the country for 1901: Imports, $818,800,000; exports, $697,200,000.

The budget estimates for 1903 are as follows: Revenue, $63,201,700; expenditure, $65,829,650. The public debt in 1902 amounted to $456,156,180.

The Colonies.—The colonial possessions of the Netherlands are entirely islands in various parts of the world. All of them are rich agriculturally, but while they derive a considerable revenue, it does not balance the expenditure on their account. All of them are governed liberally, they possess full religious freedom and have good educational advantages. These possessions are as follows:

THE DUTCH COLONIAL POSSESSIONS.

Possessions.	Area Sq. M.	Population.*	Revenue.†	Expenditure.†
Dutch East Indies:				
Java, Madura and the outposts	736,400	36,000,000	$60,875,000	$63,891,500
Dutch West Indies:				
Dutch Guiana (Surinam)	46,060	68,968	1,040,400	920,800
Curacao	403	52,301	245,200	284,800
Totals	782,863	36,161,269	$62,160,600	$65,097,100

*1900 estimate. †1902.

The Ministry.—The Ministerial Council of the Netherlands is constituted as follows: Minister of the Interior and President of the Council, Dr. A. Kuijper; Minister of Foreign Affairs, Dr. R. Melvil Baron van Lijnden; Minister of Finance, Dr. J. J. T. Harte van Tecklenburg; Minister of Justice, Dr. J. A. Loeff; Minister of Colonies, A. F. W. Idenburg; Minister of Marine, G. Kruijs; Minister of War, J. W. Bergansius; Minister of Public Works and Commerce, Dr. J. C. de Marez Oljens.

The Nation.—The Netherlands is a constitutional hereditary monarchy in which the executive power vests solely in the sovereign and the legislative power jointly in the sovereign and the States-General, the Parliament, which consists of two chambers, the First and the Second. Members of the First Chamber, fifty in number, are elected by the Provincial States for a term of nine years, while the one hundred members of the Second Chamber are elected by the people for four years. Only the Government and the Second Chamber have the power to introduce bills.

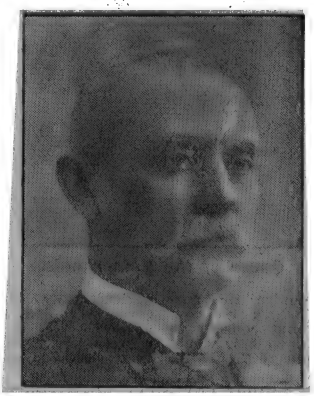
Events in 1903.—As a result of a railway strike, occurring early in the year, the Dutch Government introduced three bills in the Parliament on February 25 as a means of preventing further labor troubles. One of the bills provided for a modification of the penal code, making strikes of State employes illegal and punishable when they interfere with public service. Naturally these bills aroused considerable opposition on the part of laboring men, and popular opinion was vigorously opposed to the criminal clauses. The Government promised to modify them in such a way as to give it more control over the railways, as well as the employes, and to arrange for arbitration. The law was signed by the Queen on April 12. In the meantime, in retaliation, a general strike was ordered on all the State railways early in April. Disorders resulted and there was rioting of such a nature as to warrant a call for troops. The strike included the employes of all State public service departments. On April 12, the day the anti-strike bills became law, the strike collapsed without the end sought—the death of the bills—being effected. The special levy of militia called out to prevent disorder was disbanded the latter part of April.

On April 25 Andrew Carnegie announced a gift of $1,500,000 for a Temple of Peace to be erected at The Hague. The gift was made with the understanding that the Government of Holland be re-

sponsible for its administration. The Government accepted the responsibility, with thanks to the donor.

The war which the Dutch Government has been carrying on against the Acheenese, in Sumatra, for the past thirty years, came practically to a close in August by the submission of the rebel leaders. The war began in 1873 by the refusal of the Sultan of the Acheenese to recognize Dutch suzerainty, over which long negotiations took place. Many expeditions have been sent to suppress the rebels, and the cost has been nearly $200,000,000 and thousands of lives.

It was rumored in June that Queen Wilhelmina showed symptoms of tuberculosis, and it was recommended that she make a trip to a milder climate. Henri Willem Mesdag, the painter, was appointed in February as Dutch art commissioner to the St. Louis Exposition.



Nevada.

Capital:
CARSON CITY.

Nevada has an area of 109,901 square miles, and by the census of 1900 had a population of 42,335. Nevada formed a part of the Mexican concession of 1848, and was created a separate Territory by an act of Congress, March 2, 1861, from part of Utah. It then embraced the region bounded on the north by the present boundary, east by the 116th meridian, south by the 37th parallel of latitude and west by California. Part of California was included by the act which made Nevada a Territory, but the former State would not agree to the transfer. July 14, 1862, a further portion of Utah was added, extending the eastern boundary to the 115th meridian. By an act of March 21, 1864, the inhabitants were empowered to form a State government, and a constitution having been ratified by the people, Nevada was declared a State by proclamation of the President on October 31, 1864. A third portion of Utah was added May 5, 1866, extending the boundary to the 114th meridian, and the portion of the State south of the 37th parallel was added from Arizona.

The first settlement within the present boundary of the State was made by the Mormons at Carson, Eagle and Washoe valleys, near Genoa and Carson City, in 1848, and the two or three years following. Gold was discovered in 1849 near the present site of Dayton, and a few miners were attracted. Not until the discovery of silver, in 1859, however, did the population begin to grow. Within two years mines were in full operation and the population had increased from 1,000 to 16,000.

Gov. John Sparks.

The census reports show that manufacturing industries in this State declined steadily from 1870 to 1890, but gained somewhat during the last decade. The decrease in gold and silver mining accounts readily for the decrease in manufacturing. Car construction and repair shop work were the leading industries in 1900. Flour and grist milling and the manufacture of butter, cheese and condensed milk form other industrial interests.

Hay and wheat are the only crops of any importance in Nevada. Agriculture is carried on in the valleys, which can be easily irrigated, and where the soil is sufficiently fertile to make farming worth while. In 1902 the wheat crop amounted to 537,637 bushels, grown on 19,839 acres, while the acreage of hay was 132,712 acres, amounting to 386,192 tons. On January 1, 1903, there were in the State 76,011 horses, 16,010 cows, 364,165 other cattle, 2,991,166 sheep and 14,158 swine, valued in the aggregate at $14,582,491.

Events in 1903.—Among the important laws passed at the last session of the Nevada Legislature were these: An act providing for the reclamation of the arid lands; authorizing and directing all county and State officials to cooperate with the Secretary of the Interior; providing for office of State Engineer; providing for the compiling of all matters relating to water rights, etc. A new taxation law, which provides that city and county tax rates shall be reduced 10 cents a year until a rate of 75 cents each is reached, and said 75 cents shall thereafter be the maximum city or county rate. An eight-hour law, applying to all mines, smelters and places for the reduction of ores; also work on State, county or municipal buildings, roads, etc. Fish and game wardens were appointed for each county. Bookmaking or poolselling on prize fights or races which take place out of the State were prohibited. Forbidding sheep to be grazed or herded within one mile of any house occupied as a residence, or within three miles of a post office. A resolution was passed asking that the question of electing United States Senators by direct vote be referred to a constitutional convention.

New Hampshire.

Capital:
CONCORD.

New Hampshire has an area of 9,377 square miles, and by the census of 1900 had a population of 411,566. New Hampshire was first visited by Europeans in 1614, and the first settlements were made in 1623, at Dover and Portsmouth. In 1641 the district was annexed to Massachusetts, but in 1679 was made a royal province, with a separate government. Ten years later, in 1689, it again became part of Massachusetts, and in 1741 was once more a separate province. During its early history there was much trouble with the Indians, which culminated in a massacre at Dover in 1789, when the town was burned and nearly all of the inhabitants killed.

Until 1764 it was supposed that the territory granted John Mason in 1629 included what is now the State of Vermont. The district was claimed by New York, and for years disturbances between the two provinces continued, and it was not until 1790 that a settlement was reached.

In 1776 New Hampshire made a public declaration of independence, and men from this State took part in every battle of the Revolution, from Bunker Hill to the surrender of Cornwallis at Yorktown. The Federal Constitution was ratified June 21, 1788. In 1781 a State Constitution was formed, much like one previously adopted by Massachusetts, and on June 2, 1784, it went into force. In 1807 the seat of government was permanently established at Concord. During the Civil War New Hampshire furnished 34,605 men to the Union army and navy.

The abundant water power of the State and the proximity of the southern portion to the markets of New England have been important factors in the growth of manufacturing. Boot and shoe making is of chief importance, and the manufacture of woollen goods ranks second. Manchester is the manufacturing centre of the State, and some of the finest woollen goods in the country come from that city. Lumber and timber products, foundry and machine

shop products, and hosiery and knit goods stand in the order named.

Events in 1903.—Among the important acts passed at the last session of the Legislature were bills providing for the improvement of sanitary conditions in the towns and villages; for the licensing by the Insurance Commissioner of all insurance companies organized within the State; that no bonds, coupons, notes or other evidences of indebtedness issued by railway companies payable more than twelve months after the date of issue shall be sold or disposed of by the company for a less sum than the face value; encouraging the use of wide tires on heavy vehicles by providing for the abatement of the tax assessed against the owners of vehicles upon which wide tires have been placed; requiring non-resident hunters to secure licenses before hunting deer within the State; regulating the sale of liquors by the appointment of a License Commission, whose duty it shall be to grant licenses, under certain restrictions, for the sale of liquors. This last bill means the abolition of prohibition, which has been in force in the State for fifty-eight years. On May 12, under a provision of this bill, special elections were held in all the cities and towns and the question of license or no license for the individual communities was determined. Most of the cities favored license, while most of the towns voted for no license. On the 19th of May the commissioners had granted only nineteen licenses, and but two saloons had been opened—one in Concord and one in Manchester. The commission appointed by the Governor was composed of Cyrus H. Little, of Manchester; Harry W. Keyes, of Haverhill, and John Kivel, of Dover.

Gov. N. J. Bachelder.

Other bills were passed to encourage the planting and preservation of forests, to improve highways and appoint a highway engineer, and to send indigent consumptives to sanitariums.

On January 14 Jacob H. Gallinger was elected by acclamation to succeed himself as United States Senator.

Foot and mouth disease broke out among the cattle near Bedford in March, and a rigid quarantine was at once instituted by the Department of Agriculture. It was not raised until late in the Summer, when the disease was eradicated.

The cotton mills at Newmarket were closed March 30 on account of a disagreement with the weavers about overtime work. A settlement was reached in a short time. A fire at Laconia on May 26 destroyed property to the extent of $500,000. The drought of April and May caused a loss of about $1,000,000 to the farmers of the State.

New Jersey.

—

Capital:
TRENTON.

New Jersey has an area of 8,173 square miles, and by the census of 1900 had a population of 1,883,669. The first colony in New Jersey was probably planted at Bergen between 1617 and 1620 by the Dutch of New Amsterdam, who claimed the entire country. In 1623 Fort Nassau was built by the Dutch. In 1634 England obtained a grant of land along the Delaware, and later on a party of Swedes and Finns purchased land in the same region from the natives. The Dutch and Swedes united against the English, driving out that colony, and then the Swedes themselves were driven out by the Dutch. In 1664 Charles II. disregarded the claims of the Dutch and granted to the Duke of York all the land lying between the Connecticut and Delaware rivers. New Amsterdam was captured, and shortly afterward Elizabeth, Newark, Middletown and Shrewsbury were founded. Philip Carteret was made Governor of the region now embraced in New Jersey, but in 1670 the people revolted, drove out Philip and chose his brother, James Carteret, as Governor.

In July, 1673, the Dutch recaptured New Amsterdam, then New York and the surrounding country, but held it only one year, when it was reconveyed to Great Britain. From 1674 to 1681 Andros held the office of Governor of all the British colonies. In 1675 a Quaker settlement was formed at Salem, and the country below Little Egg Harbor was occupied by them. In 1682 William Penn and eleven others purchased this whole region. In 1702 the proprietors surrendered the rights of the province to the Crown, and New Jersey became a royal province, governed at first with New York, but in 1708 it was given a separate administration. In 1776 a State Constitution was formed, and the first Legislature met at Princeton. In 1790 the State capital was moved to Trenton. During the Revolutionary War the battles of Trenton, Princeton, Millstone, Red Bank and Monmouth were fought on New Jersey soil. During the Civil War the State furnished 79,511 fully equipped troops to the Union army and navy. For two decades New Jersey has stood sixth in rank in manufactures, its industrial position being due largely to its proximity to great markets and its transportation facilities. Of greatest importance is the textile industry, and the State stands high in the manufacture of silk. The refining of petroleum has also grown to a condition of considerable commercial importance.

Events in 1903.—The State Legislature at its last session passed an important bill regulating the speed of automobiles within the State. The bill is made applicable to any motor-driven vehicle not propelled exclusively by muscular pedal power. It provides that automobiles may be driven at the rate of one mile in six minutes around curves and at important cross roads in the country, at one mile in seven minutes in cities and at one mile in three minutes in the open country. Licenses are required to drive a motor vehicle, and before such are granted it must be shown that the driver is competent to manage the machine. All automobiles are required to show a license number in conspicuous figures. Non-residents as well as residents are made amenable to the law, and no exception is made in the case of physicians. Three constitutional amendments passed to be presented to the people at the primaries in September were defeated when the popular vote was taken.

Gov. Franklin Murphy.

The first election under the primary law passed at the Winter session of the Legislature was held September 8. Under the law ward conventions for the nomination of Aldermen and minor officials are abolished and candidates are nominated directly by the people. There were important contests in Jersey City, Hoboken and Newark, and where heavy votes were polled there was considerable delay in counting owing to the imperfect understanding of the law and the nature of the ballots.

The General School law of the State, passed by the Legislature, which provides for a sort of State-

wide graded school system, was declared unconstitutional by the Court of Errors and Appeals in September. The law was brought to the attention of the Supreme Court in March, and was then declared constitutional, but errors were found in it, and the Appeal Court was applied to for a final decision. The question will go before the next session of the Legislature, and it is likely an entirely new law will be framed.

The report on new corporations started in New Jersey showed a decrease in number and fees during the year. The charters of 927 companies were dissolved for non-payment of the annual tax. Action on the abandonment of the Morris Canal was deferred until the next session of the Legislature.

On February 19 a trolley car loaded with school children was struck by an express train at a grade crossing in Newark and nine of the children were killed. Indictments were brought against the officials and executive board of the North Jersey Street Railway Company, charging them with manslaughter. On August 31 the case was brought to trial, and was taken from the jury by the court and the defendants were acquitted. February 9 the Barnes Chemical Works, at Paterson, was destroyed by fire, with a loss of about $100,000. February 21 the dye works of Lamond & Robertson was burned, with a loss of $40,000. July 22 Paterson was struck by a tornado, which rendered 65 families homeless. During the year the city was rapidly recovering from the effects of the disaster of the year before, and in celebration of its rejuvination the week of September 18 was set apart as "Forget It" week, when the city was given over to pleasure. Heavy rains caused another flood in Paterson and Passaic October 9, 10 and 11. Thousands of persons were thrown out of work and hundreds rendered homeless in the former city, and $3,000,000 in property was lost.

New Mexico.

Capital:
SANTA FE.

New Mexico has an area of 122,687 square miles, and by the census of 1900 had a population of 195,310. New Mexico was among the first of the interior sections of the United States to be visited by the Spaniards, nearly a century before the English landed on the Atlantic coast. Some time before 1537 Alvar Nunez visited the country, and in 1539 the expedition under Marco de Niza, and a year later another, under Coronado, made some explorations. About 1581 Augustin Ruiz, a Franciscan missionary, entered the country, but was soon murdered by the Indians. Formal possession of the region was taken by Juan de Onate in either 1595 or 1599, and the missionaries who accompanied his expedition met with much success in Christianizing the Indians. Many of the Indian tribes, and especially the Pueblos, were found in an advanced state of civilization and were among the first to embrace the new religion offered by the Spanish priests.

Gov. Miguel A. Otero.

The oppressions of the newcomers aroused a feeling of resentment in the Indians, and they began to make resistance, and in 1680 succeeded in driving the Spaniards from the country. In 1698 Spain regained possession of the region and held it until 1846, when Santa Fe was taken by the United States troops under General Kearny, who soon after conquered the whole territory from Mexico. In 1848 it was ceded to the United States by the treaty of Gaudalupe Hidalgo. A territorial government was formed in 1850, and since 1875 the question of admitting New Mexico to Statehood has been before Congress. The aggregate value of the manufactures in the Territory is small, mining and stock raising being the most important industries, and agriculture ranking next. New Mexico has a larger number of sheep than any other Territory, and several large wool-scouring plants have been recently established.

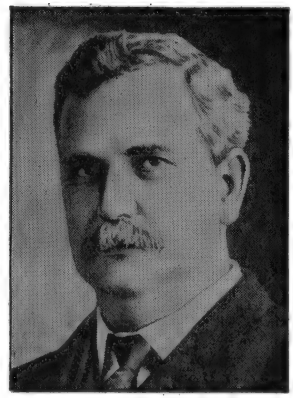
Events in 1903.—The Omnibus Statehood bill pending before the National Congress engrossed the attention of New Mexico during the year and was made the subject of a memorial presented by the Territorial Legislature. The bill provided for the admission of New Mexico, Arizona and Oklahoma into Statehood. New Mexico claimed the right to Statehood on the grounds that she had the requisite population and was fully entitled to independent government, and had furnished more soldiers for the Spanish and Civil wars in proportion to her population than any other State or Territory. Adjacent States were also memorialized, asking their aid in securing the much-desired change of government.

Among the many bills passed by the Territorial Legislature were the following: An act to permit charitable, benevolent and scientific institutions having no capital stock to consolidate upon consent of three-fourths of the board of directors of each; an act creating the office of game and fish warden of the Territory, to provide for the protection of game and fish, establishing game laws and providing penalties for their violation; an act regulating the admission of foreign corporations, compelling them to file with the Secretary of the Territory a copy of their charters; an act changing the method by which the death penalty shall be inflicted, making executions private, to be witnessed by not more than twenty persons, including members of the medical profession, officers of the law, clergymen and representatives of the press; an act authorizing the practice of osteopathy within the Territory; an act creating county boards of horticultural commissions and to promote the horticultural interests of the Territory.

New York.

Capital:
ALBANY.

New York has an area of 53,719 square miles, and by the census of 1900 had a population of 7,268,894. Lake Champlain, in the upper part of New York State, was discovered in 1609, and the same year Henry Hudson discovered New York Bay and entered the river which bears his name. The land, under this discovery, was claimed by Holland. In 1614 privileges were granted to any company opening trade with the natives. Quick advantage was taken of this offer by several Dutch companies. The first settlement was made on Manhattan Island. In 1621 the Dutch West India Company was incorporated, and in 1623 eighteen families settled at Fort Orange, now Albany. In 1626 Manhattan was purchased from the Indians. During 1638 Indian troubles began, which lasted until 1647, when Peter Stuyvesant became Governor of the colony and conciliated the natives. In 1664 a charter to all the land between the Connecticut and Delaware rivers was granted the Duke of York, and in August of that year New Amsterdam was captured and named New York. At this time the slave trade, begun by the Dutch in 1627, had



grown to such proportions that New York contained more slaves than Virginia.

In 1688 Andros became Governor of the English colonies and appointed Nicholson Lieutenant-Governor of New York. The next year the people of the town of New York revolted against the harsh methods of the ruler and seized the government, to be administered for William and Mary. In 1690 Schenectady was burned by the Indians and the people massacred. During the contest between the French and English colonists in 1754 the upper part of the State was subject to much fighting. In 1759 the French were finally driven out across the borders into Canada.

In October, 1775, Tryon, the last of the royal Governors, was driven from the province. In 1731 the Connecticut boundary was established, and in 1789 the claims of Massachusetts were settled. In 1790, to end disputes that had continued nearly a century, Vermont was made a separate Territory, New York receiving $30,000 in return for her claim. In 1800 the first idea of a canal to the lakes was broached, and in 1808 the first survey was made. A law authorizing its construction was passed in 1816, and work was begun the following year. In 1825 the canal was completed.

During the Civil War New York furnished 455,568 troops to the Union army.

Events in 1903.—Probably the most important act of the New York State Legislature was the passage of the Canal bill, which provided for a referendum at the next general election on the appropriation of $101,000,000 to be expended in improving the canal system of the State. No bill met with more determined opposition, coming chiefly from the Republicans, and in spite of the fact that the question was to be submitted directly to the people a strong and continued fight was waged. The bill proposes a thousand-ton barge canal in place of the Erie Canal, to run from Troy to Buffalo, partly over the route of the old canal and partly by newly constructed channels. The bill also provides for the improvement of the Oswego and Champlain canals by deepening and widening.

Gov. Benjamin B. Odell, Jr.

Fourteen bills promoted and proposed by labor and humanitarian organizations were passed. Four of them provide for the regulation of the employment of children; one provided for the licensing of newsboys under fourteen years of age, another affects child labor in mercantile establishments and a third increased the penalties for false statements in employment certificates. The Hughes bill to prevent discriminations by labor unions and employers against members of the National Guard was passed and approved. The general establishment of children's courts was made obligatory. This requires that all cases involving the commitment or trial of children under fifteen year of age be heard apart from the trial of other criminal cases, a separate docket and record to be kept, and as far as possible a separate courtroom provided. The age for which abandonment of children is a misdemeanor was raised from six to fourteen years. Junk dealers are prohibited from purchasing any merchandise from any child under the age of sixteen years.

A law regulating the speed of automobiles, known as the "Bailey law," provided a scale of penalties for the violation of its provisions. The first offense was to be punishable by suspension for two weeks of the right to operate; second offense, suspension for one month; third offense, revocation of right to operate. The bill included provisions requiring the registration of all machines, a clause which was declared unconstitutional by the Supreme Court in August. On January 20 United States Senator T. C. Platt was re-elected, receiving 111 out of 117 Republican votes.

The Franchise Tax law, providing a tax for special franchises and the assessment of such by the State Tax Board, was declared unconstitutional by the Appellate Division of the Supreme Court in January on the grounds that, while the legality of taxing franchises is unquestioned, the assessment should be done by local officers and not by a State board. The case was taken to the Court of Appeals, which on April 28 handed down an opinion adverse to that of the Appellate Division, holding that special franchises extending through several municipalities cannot be taxed by local authorities.

An epidemic of typhoid fever at Ithaca in February and March caused 64 deaths and the illness of 655 persons. It was thought to be due to a pollution of the water supply of the city, which had been furnished by a private corporation. On March 2 the citizens of Ithaca decided to purchase the water works and make themselves responsible for the purity of the supply. In September several large artesian wells were completed, enough to furnish the city with absolutely pure water.

An unusual condition of affairs occurred in Livonia, Livingston County, in March. The newly-elected town officers, finding the election held on March 10 to be invalid, took steps to have themselves removed from office, fearing that their official acts might be at any time set aside on account of this fact.

During April and May serious fires occurred in the Adirondack Mountains, destroying several hunting camps and an incalculable amount of fine timber. On June 7 a heavy rain checked the fire, but by that time fully 1,000,000 acres had been denuded.

The Mohawk River rose above the danger mark in February, and on March 2 a large dam near Schenectady gave way, flooding the lowlands and causing the destruction of much valuable property. A train of tank cars exploded at Olean on March 10, killing twenty-two persons and injuring scores of others. The train caught fire and the people killed and injured had been attracted by the glare to watch the flames.

On March 22 the American Falls at Niagara went dry. For the first time in fifty-five years people were able to walk about in the river bed. The extraordinary condition was due to an ice jam which formed in shallow places up the river.

Nicaragua.

—

Capital:
MANAGUA.

Nicaragua was discovered in 1502 by Gil Gonzales Avila, who found the country under the rule of a cacique named Nicarao. The country was soon subjugated, and the history of Spanish rule which followed was much the same as that of other South American countries. On September 15, 1821, Guatemala, to which Nicaragua was attached as a province, proclaimed its independence of Spain. The movement was followed by Nicaragua and the other provinces, and the Central American Confederation was formed. Nicaragua and Honduras soon withdrew from the union and proclaimed themselves free and sovereign States. In 1847 the British invaded the country, and in 1855 a filibustering expedition conducted by William Walker aroused the people to resistance.

The President,—General Jose Santos Zelaya (1902-1906).

The Cabinet.—Secretary of Foreign Affairs, Jose Francisco Aguilar; Secretary of Interior, Adolfo Altemirano; Secretary of Finance, Felix Pedro Zelaya; Secretary of Public Works, Jose Dolores Gomez.

The Government.—Legislative powers are vested in a Congress of one House, the members of which are elected by universal suffrage for a term of two years. The number of members is forty. Judicial power is vested in a Supreme Court, two chambers of second instance and judges of inferior courts. The republic is divided into thirteen departments, two comarcas and three districts, each of which is under a political head. The Mosquito Reserve is now a department and is named Zelaya. The

heads of the departments have supervision of finance, instruction and other matters, and are military heads of the sections.

The Nation.—Nicaragua has an area of about 49,200 square miles and a population of about 500,000, including uncivilized Indians. The mass of the population consists of aboriginal Indians, mulattoes, negroes and mixed races. The number of Europeans is small, though on the increase. The Mosquito Indians are under the protection of Great Britain, whose government, it is said, is willing to withdraw all claims to jurisdiction in the country. Immigration is encouraged, and in 1900 a concession of 60,000 acres was granted for colonization, the concessionaire endeavoring to encourage agricultural immigrants from northern Europe.

Education is encouraged. There are ten colleges and two universities, and, according to an official statement, there were 323 elementary schools in 1900. A National Industrial, Commercial and Scientific Museum has been established at Managua. The constitutional religion of the republic is Roman Catholic, but all forms of faith are permitted.

Coffee forms the principal agricultural industry of the country, and its cultivation is being rapidly extended, chiefly by Germans, who own most of the plantations. In 1902 the coffee crop was about 30,000,000 pounds, the largest ever produced. Bananas are extensively cultivated in the Bluefields region, and there are several rubber plantations in this section which give promise of large yields in the future. The sugar industry is expanding, as is also the cultivation of cacao. Tobacco is cultivated, but it is coarse and it serves for home consumption only. There are more than 100 mines in the republic, most of which are worked by American and British companies. Gold mixed with silver is found in nearly all of these. Manufacturing is carried on for local uses only, the principal articles manufactured being furniture, boots and shoes, cigars and cigarettes, sugar, rum, beer, candles and soap. Railroads belong to the Government, except the Silica Railway, seven miles long.

President Zelaya.

Events in 1903.—A rebellion broke out in the Department of Chontales, near Lake Nicaragua, in March, and spread to other departments. Its cause was assigned to the friendship shown by President Zelaya to President Sierra of Honduras in his unsuccessful attempt to retain the Presidency of that country. There was much intriguing and counter plotting. The revolutionists seized the steamers on Lake Nicaragua, enabling them to escape the force sent against them by the President. Later they took the Government gunboat and were able by its aid to resist the attempts made by Government troops to dislodge them. At no time did the rebellion assume very serious proportions, although it was said the rebels had received aid from President Bonilla, the successful contestant in Honduras. Its leaders were finally captured and imprisoned. On July 12 President Zelaya granted amnesty to all of his political enemies, pardoning, as well, political prisoners.

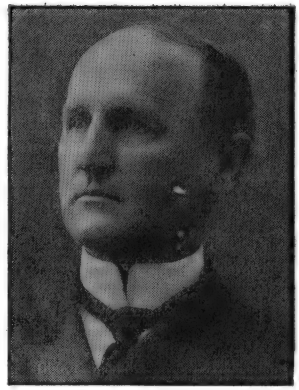
The final rejection of the canal treaty by Colombia in September brought the Nicaraguan route to the front. Nicaragua was made second choice in the bill passed by the United States Congress in the Spring providing for the construction of a canal across Central America. Since December 10, 1901, the United States has held an option on a lease in perpetuity to a strip of land, including the canal route, and but little action by the Nicaraguan Government will be necessary to give the United States complete rights to dig the channel. Considerable work of a preliminary nature has already been accomplished, including a railway extending through an almost impenetrable swamp.

A concession has been granted a citizen of the United States giving him the sole right to exploit for a term of twenty-five years all gold, silver, copper, coal, coal-oil, precious stones and any class of precious metals in a territory equal to about one-sixth of the whole republic. In return the Government is to receive 12 per cent of the net profits of the undertaking, $100,000 in gold having been paid in advance.

North Carolina.

Capital:
RALEIGH.

North Carolina has an area of 52,474 square miles, and by the census of 1900 had a population of 1,893,810. A party under Ralph Lane, sent out by Sir Walter Raleigh, made the first attempts at settling North Carolina, landing on Roanoke Island. Quarrels with the Indians caused the party to stay but a year, and it returned with Sir Francis Drake's fleet. Other colonists were sent out by Raleigh the same year and the year following, but none returned, and all were supposed to have been murdered by the Indians. It was not until the seventeenth century that any permanent settlements were formed. In 1663 Charles II. formed the Province of the Carolinas, which he granted to eight noblemen, who were joint proprietors and vested with jurisdiction over the colonists. A scheme of government was written by John Locke and was made the fundamental law for about twenty-five years. Albemarle, the name then given to what now constitutes North Carolina, was augmented by settlers from Virginia, New England and Bermuda, and by the beginning of the eighteenth century the colony had already become noted for its tobacco. About 1711 the Tuscaroras began a war of extermination against the whites, but, with the assistance of the people of the other colonies, the North Carolinians subdued them in 1713, and later other hostile tribes were also reduced to subjection. In 1729 North Carolina became a royal province and was given a government separate from South Carolina. In 1775 an association for the defense of the rights of the colony was formed in Mecklenburg County, and all allegiance to England was renounced, anticipating the united colonies by nearly a year.



On May 21, 1861, at a convention assembled at Raleigh, the Ordinance of Secession was passed and the Confederate Constitution ratified. Delegates were chosen to the Confederate Congress. Forts Hatteras and Clarke were captured by the Federal forces August 29, 1861, and on February 8, 1862, Roanoke Island was taken. Newbern was captured March 14 of the same year. On January 15, 1865, Admiral Porter and General Terry captured the defenses of Cape Fear River, and on February 22 Wilmington fell. Raleigh was captured on April 13, and on April 26 Johnston's army surrendered, ending hostilities in the State. The Fourteenth Amendment to the Federal Constitution was ratified November 13, 1865, and the Fifteenth Amendment on March 4, 1869.

Events in 1903.—The North Carolina Legislature in 1903 passed 1,230 acts, the greater part of which were of local or restricted application, and of the rest but few were of general interest.

The most striking new legislation of the session is an act to regulate the manufacture and sale of liquors, popularly known as the Watts bill. The principal new feature is that which restricts the manufacture and sale of liquors to incorporated cities and towns. Another act amends the law relating to permanent roll of voters. Its effect is to give life to the "grandfather clause" of the recent suffrage amendment to the State Constitution, which disfranchises most of the negro voters while protecting nearly all white citizens in the right to vote. Chapter 380 provides for the establishment and enlargement of libraries in the rural public schools. Chapter 499 provides pensions for disabled Confederate veterans, ranging from $72 a year for total disa-

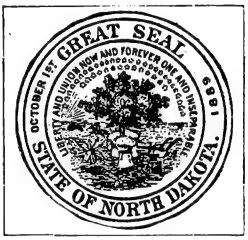
bility to $30 for partial disability. Chapter 517 provides for the inspection and labeling of certain commercial food stuffs. Chapter 577 provides for the registration of trained nurses, but does not abridge the rights of nurses not registered. Chapter 764 regulates the hours of labor in mills and factories and prohibits the employment of children under twelve years. Chapter 886 provides for the preservation of song and game birds and incorporates the Audubon Society with large powers. Chapter 927 prohibits overcharges and certain other abuses of railroads and other corporations. A joint resolution introduced into the House of Representatives relating to a proposed constitutional amendment for the direct election of United States Senators was adopted by both houses.

Gov. Charles B. Aycock.

Lee S. Overman was elected to the United States Senate, to succeed J. C. Pritchard.

The Legislature incorporated the seven colored normal schools of the State into three, one of the largest of which is in Fayetteville. This school has a record of twenty-six years' good work, and is one of the most completely equipped colored normal schools in the South. Some surprise was felt by the "black" Republicans of the State when President Roosevelt appointed as postmaster in the town of Wilson a member of the "lily white" faction of the party. It had been expected that the negro applicant for the position would be chosen. An ordinance of an incorporated town in North Carolina required all shops where merchandise was sold to close at 7:30 o'clock every evening, except Saturday, during July, August and September. The Supreme Court decided that, in absence of a more express statute, the town could not pass such an ordinance.

The cotton yield of North Carolina for 1902 amounted to more than 545,300 bales, of which 518,068 were ginned within the State.



The principal crops for the year ending December 31, 1902, were as follows: Corn 2,706,682 acres, 37,622,880 bushels; Winter wheat, 576,558 acres, 3,055,757 bushels; potatoes, 24,890 acres, 3,024,416 bushels; tobacco, 219,263 acres, 142,520,900 pounds.

North Carolina had a larger yield of rice than any State except Texas.

According to a report of the Department of Agriculture there were 2,101,354 farm animals in North Carolina, of which 162,438 were horses and 138,048 were mules. The number of milch cows was 201,460; other cattle, 307,772; sheep, 220,682, and swine, 1,071,154.

North Dakota.

Capital:
BISMARCK.

North Dakota has an area of 70,879 square miles, and by the census of 1900 had a population of 319,146. The Territory of Dakota, of which North and South Dakotas were formed, originally constituted part of the Territory of Minnesota, which was organized in 1849 from part of the Louisiana Purchase of 1803. In 1854 the Territory of Nebraska was formed, comprising then the present State of Nebraska and all of Dakota. On March 2, 1861, the Territory of Dakota was organized, comprising then the States of Montana and Wyoming. The first permanent settlements by whites were made in 1859 in Clay, Union and Yankton counties. On November 2, 1899, the Territory was divided and the States of North and South Dakota formed and admitted to the Union at the same time. The history of the settlement and growth of the country is identical with that of the Territories of which it originally formed a part.

The principal industries of North Dakota are agriculture and stock raising, though there has been an increase in manufacturing the last few years. The manufacturing interests depend upon local needs, however, and, except in the case of flour and grist mill products, the entire product of the manufactures is consumed at or near the point of production. During 1902 coal mines were opened in the western part of the State, from which an excellent quality of lignite is obtained. The coal deposit had been known for some time, and the coal famine of the Winter of 1902-03 brought about its development.

Gov. Frank White.

Events in 1903.—The State Legislature re-elected Henry Hansbrough to the United States Senate on January 20. There was no opposition.

At the beginning of 1903 North Dakota had on hand a surplus of $670,409.35 over all expenditures for the year before. The receipts had been $2,125,282.24, and the total expenditures $1,915,785.34. The total funded debt of the State at the beginning of the year was $262,300. According to the Crop Reporter the principal field crops of the State in 1902 were as follows: Corn, 82,700 acres, 1,604,380 bushels; Spring wheat, 3,954,229 acres, 62,872,241 bushels; oats, 766,590 acres, 29,437,402 bushels; barley, 501,984 acres, 15,861,557 bushels; potatoes, 23,725 acres, 2,491,125 bushels; hay, 135,420 acres, 224,797 tons; flaxseed, 2,160,000 acres, 15,552,000 bushels. The yield of flaxseed exceeded all that grown in the rest of the United States. According to the Department of Agriculture the number of farm animals in the State at the beginning of the year included 358,770 horses, 7,032 mules, 166,665 milch cows, 570,956 other cattle, 827,781 sheep and 175,403 swine. The yield of coal from the newly developed lignite mines in the western part of the State amounted in value to more than $500,000 in 1903.

Active work in carrying out the irrigation plans of the Federal and State Governments was begun during 1903. Under the irrigation act of June 17, 1902, North Dakota was to receive its share of the appropriation for the work, and as the State had already a considerable fund for the same purpose, there was but little delay in commencing preliminary operations. A topographical survey of the arid sections of the State was begun in April, under direction of the United States Geological Survey. The first work consisted of an examination of the western part of the State, for the diversion of the main Missouri River and its tributaries in the northern and southern parts of the State. Wherever conditions might seem to warrant the expenditure of the money for irrigation purposes, a more careful survey will be made and an estimate of the cost asked.

Ohio.

—

Capital:
COLUMBUS.

Ohio has an area of 44,464 square miles, and by the census of 1900 had a population of 4,157,545. Ohio was first visited by La Salle in 1668, and some exploration of the region was made in 1680 by French adventurers, who caused a quarrel with the English by claiming this country for France. In 1749 the "Ohio Company" was formed for the development of this region, and in 1763 France ceded her claim on the territory to Great Britain. By the terms of the treaty of peace of 1783 Ohio became part of the United States. From 1784 to 1800 the claims of various States to this territory were ceded to the United States and the claims of the Indian tribes settled by treaty. In 1786 the second Ohio company was formed, and the next year the Northwest Territory, including the district north of the Ohio and east of the Mississippi, was organized. The first permanent settlement was made at Marietta, in 1788, and the same year Cincinnati was founded, under the name of Losantville. From 1788 until 1795 there was much trouble with the Indians, settled finally by the treaty of "Three Fires," by which the whites secured title to land comprising two-thirds of the State. Cleveland, named after Moses Cleveland, was founded in 1796.

Ohio was formed into a separate Territory in 1800, and two years later was admitted to Statehood. The First General Assembly under the State Constitution met at Chillicothe in 1803. In 1812 Columbus was laid out as the site of the State capital. In 1818 the first steamboat, the Walk on the Water, was launched on Lake Erie. In 1836 the first Western railroad was opened, from Toledo, Ohio, to Adrian, Michigan, with horse power at first and, in 1837, with steam power. The State began to be noted for wheat growing about 1840, and in 1863 her coal and iron mines began to be developed. Manufacturing became an important industry about 1865, and for a decade grew rapidly. The Standard Oil Company was formed in 1870, and during the next two decades the State's oil fields were rapidly developed. During the Civil War Ohio furnished one-eighth of the Federal troops.

The most important industry in the State is the manufacture of iron and steel, Ohio leading all States west of the Alleghany Mountains. Natural gas is used as fuel in some of the rolling mills and steel works, and the coke needed is furnished by Pennsylvania and West Virginia. Local ores are largely used. Flour and grist milling, meat packing and the manufacture of malt liquors are other important industries.

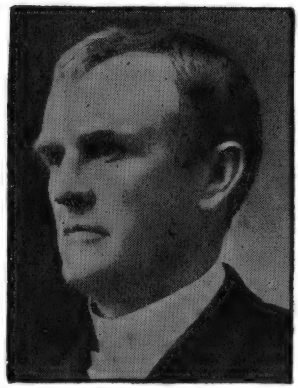
*Term expires January 1, 1904.

*Gov. Geo. K. Nash.**

Events in 1903.—City elections were held throughout the State on April 6, and in general Republican gains were shown, though there were but few changes in the administrations. In Columbus the Democratic candidate, Mayor Hinkle, was defeated by Jeffrey, a Republican. Mayor Fleischmann was re-elected by an increased majority in Cincinnati, and Tom L. Johnson was again chosen Mayor of Cleveland. Toledo's Mayor, Samuel M. Jones, was elected for a fourth term. In Cleveland a strong fight was put up to prevent the re-election of Mr. Johnson, and efforts were made to unite the opposing factions of the Republicans in that city. Mr. Johnson's victory was complete, however, and placed him at the head of the party in the State. It was considered a blow sufficient to weaken the chances of Mark A. Hanna when he comes up for re-election to the United States Senate. Mr. Hanna has an hard fight ahead of him. The State Republican Convention ws held at Columbus on June 4. Myron T. Herrick, of Cuyahoga, was nominated for Governor without opposition, and other candidates were selected without trouble. The State Committee was chosen on June 18, the influence of Senator Hanna being shown in the selection of the members. General Charles Dick was re-elected chairman.

The Democratic convention met on August 26. A programme arranged by Tom L. Johnson was carried out completely. Mayor Johnson was nominated for Governor by acclamation, and, although there was some opposition from the Zimmerman faction, the nomination was made unanimous. John H. Clarke, of Cleveland, was endorsed as candidate for the United States Senate. Resolutions were passed announcing adherence to the Kansas City platform of 1900.

The centennial of Ohio's Statehood was celebrated at Chillicothe on May 20 and 21. Early in the year a topographical survey of the State was begun by the United States Zoological Survey, in co-operation with the State. The work will result in a complete topographical map of the waterways and the oil and coal regions. The chapel of Oberlin College was destroyed by fire on January 25; February 19 property worth $250,000, including the Y. M. C. A. building and Fountain Theatre, was burned at Springfield; several business houses were burned, and the St. Nicholas Hotel damaged in Cleveland on April 26. In March serious floods in the Ohio River threatened the towns along its banks and did much damage to farm land and bridges.



Oklahoma.

—

Capital:
GUTHRIE.

Oklahoma has an area of 38,958 square miles, and by the census of 1900 had a population of 398,331. The history of Oklahoma before it was constructed into a separate Territory is identical with that of the region of which Texas and New Mexico formed a part. When Indian Territory was created as a home for all the Indian tribes most of what is now Oklahoma was within its bounds. Some time in the early seventies the name first appeared in political history, the occasion being a bill introduced into Congress to create a Territory out of part of Indian Territory, to be known as Oklahoma. The measure failed of passage and for more than a decade nothing was heard of the country. It was not forgotten, however, as in March, 1889, an amendment was tacked on to the Indian Appropriation bill providing for the opening to homestead settlers of the little area of land embracing less than 3,000,000 acres and lying in the centre of what is now the great Territory. The land was opened in April, 1889, and the first rush of Oklahoma "boomers" took place. In June, 1890, the Territorial Government first came into existence, and by the act which brought this about a strip of land known as "No Man's Land," consisting of 3,681,000 acres, was added as Beaver County. Other sections have been added from time to time until the Territory at present contains 24,933,120 acres which respond readily to cultivation. Oklahoma is primarily an agricultural and stock-raising country, with indications of becoming a min-

ing section before another decade has passed. Gold, lead, silver and zinc have been found, though not yet in paying quantities, and surface sandstone and gypsum are widely scattered over the Territory. The most promising mine industry of Oklahoma at present seems to be that of salt, of which there is said to be enough on hand to supply the nation. In manufacturing there has been a large increase during the last decade, but the total is insignificant. The rapid development of cotton raising has been attended by a like development in the manufacture of cottonseed oil and cake.

Gov. Thos. B. Ferguson.

Events in 1903.—A peculiar case came up in January regarding a prisoner sentenced in Oklahoma and imprisoned in Kansas. Oklahoma has no penitentiary and has made arrangements with Kansas whereby prisoners are sent from the Territory to the State, where they are guarded, fed and put to work until the expiration of their sentences. In January one of the convicts instituted habeas corpus proceedings before the Supreme Court of Kansas, arguing that the State of Kansas had no right to hold him prisoner for a crime committed in another State or Territory, and that the courts of Oklahoma had no right to sentence him to prison in Kansas. The matter came near causing considerable trouble to the Territorial authorities, who felt themselves near the point where they might be obliged to hire a special train and convey back to the Territory the 285 convicts serving time in Kansas, with no adequate accommodation ready. The youth of Oklahoma as a Territory made the demand for Statehood at the Winter session of Congress even stronger than that of New Mexico or Arizona. Most of the inhabitants are from the States, where they have had a larger voice in the affairs of government than is permitted in the Territory, and the paternalism of the Federal supervision has proved irksome to them. The Territory seems well equipped materially for Statehood. The last census, made for the schools in 1902, showed a population of about 149,000, and to this the population of the new lands must be added, making the total about 570,000, or more than Maine or Vermont or Florida or Oregon. In December, 1902, there were 13,000 farms opened, and growth has been continuous since. The assessed value of the Territory in 1902 was $60,000,000. The Atchison, Topeka & Santa Fe Railroad has taken up the development of the country and is building extensive feeders through the Territory and into Indian Territory. In connection with this work elaborate colonization plans have been perfected whereby farming communities may be started and helped.

On May 23 a tornado struck the town of Carmen and tore it literally to pieces. About thirty lives were lost and much property was destroyed. On September 12 a tornado did extensive damage near Bloomington, in southwestern Oklahoma, destroying farm buildings, but causing no deaths.

Fire in Oklahoma City on February 4 destroyed property to the value of $250,000.

Oman.

Capital: MUSCAT.

Oman is an independent State of southeastern Arabia, with an area of 82,000 square miles and a population of 1,500,000. The capital was occupied by the Portuguese until the seventeenth century, and after various vicissitudes it was taken in the eighteenth century by Ahmed bin Sa'eed, of Yemenite origin, who was elected Imam in 1741, and whose family has since ruled. On the death of the Sultan, in 1854, Zanzibar was detached from Oman and placed under the rule of the second son, and subsequent troubles curtailed the area of the State in Asia. The revenue of the Sultan amounts to about $250,000. In 1901-02 the exports were valued at $1,641,076 and the imports at $2,996,488. There is a weekly mail to and from Bombay.

The principal imports are rice and other provisions, arms and ammunition and cotton goods, and the exports consist chiefly of dates and mother-of-pearl, which go to England and India.

The closest relations have for years existed between the Government of India and that of Oman, and a British consul and political agent resides at Muscat. The number of vessels entered and cleared at the port of Muscat in 1901-02, the last year for which reports are obtainable, including the native craft, was 425, of 176,000 tons, of which 273, of 161,448 tons, were British. The telegraph cable was extended to Muscat in 1902.

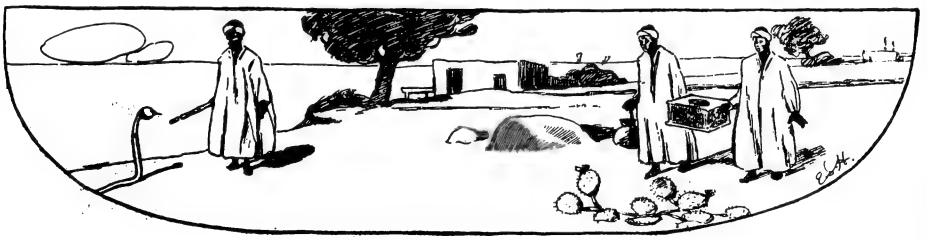
Oregon.

Capital: SALEM.

Oregon has an area of 96,838 square miles, and by the census of 1900 had a population of 413,536. In 1543 Cabrillo and Ferrelo sailed along the Pacific coast and discovered Oregon, but made no claim to it. In 1578 Sir Francis Drake, while circumnavigating the globe, rediscovered the coast for England and named it Nova Albion. Nearly 200 years later, in 1741, Behring discovered Mount St. Elias and took possession of all contiguous territory in the name of Russia. In 1774 Nootka Sound was discovered, and the next year Heceta landed on the soil of old Oregon and took possession for Spain. Captain James Cook discovered and named Capes Flattery, Foulweather and Gregory in 1778, and in 1792 Vancouver explored the coast and charted North Pacific waters. On May 11 of the same year Captain Robert Gray entered Deception Bay and discovered the mouth of the Columbia River. By the purchase of 1803 the United States obtained from France her claims to this territory, and in 1804-06 Lewis and Clark crossed the continent and sailed down the Columbia to the ocean. The first house ever constructed on the Pacific coast by a white man was built by Captain Nathaniel Winship in 1810. In 1811 the trading post of Astoria was established for J. J. Astor's fur company, and the same year an English fur company entered Oregon in competition for the fur trade. In 1812 Astoria was captured by the British, but was returned to the United States at the close of the war, a treaty being signed in 1819 for the joint occupancy of Oregon by the United States and Great Britain.

In 1834 the first settlement was made in Willamette Valley by Jason Lee and a missionary party, and from 1836 to 1846 there was a large immigration of settlers from the East. Portland was founded in 1840. On May 12, 1843, a provisional government was formed, the first American government on the Pacific, and in 1846 England gave up her claims to any part of the territory, boundary being fixed at the forty-ninth parallel. In 1848 Oregon was given a Territorial form of government, and in 1850 the seat of government was moved to Salem. Washington Territory was created from part of old Oregon in 1853, and in 1863 Idaho was made a Territory. Later parts of Oregon were taken to add to Wyoming and Montana. In 1857 Oregon adopted a constitution, and the next year was admitted to Statehood. During the Civil War the State took no actual part in the conflict. A Lewis and Clark centennial celebration is planned to be held in 1905.

Events in 1903.—The principal acts of the Legislature of Oregon at its twenty-second session, begin-



ning January 12, 1903, were: The appropriation of $500,000 for the holding of an exposition at Portland, Oregon, in 1905, in commemoration of the expedition of Lewis and Clark into the northwest country in 1805; the passage of a corporation license tax law which fixes graduated fees for the filing of articles of incorporation and requires the payment of annual license fees varying according to the amount of the authorized capital stock; the passage of an inheritance tax imposing taxes upon all inheritances, bequests or gifts in anticipation of death where the estate exceeds $10,000 and the inheritance exceeds $5,000—the tax is computed only upon the excess over the amounts stated; the passage of an act requiring that capital punishment be inflicted within the walls of the State Penitentiary; an act prohibiting the circulation of publications given principally to criminal news or reports of the deeds of criminals; an act authorizing country school districts to consolidate and provide transportation for pupils residing in distant portions of consolidated districts; an act authorizing the State to carry its own fire insurance on its buildings and to rebuild any that may be destroyed —no emergency fund is created, but authority is given for the issuance of State warrants; an act making it lawful to conduct theatres on Sunday; an employers' liability act, otherwise known as a fellow-servant law, applying only to railroad companies; an act for the punishment of persons who injure birds or disturb their nests or eggs without a license, and then only for scientific purposes, licenses to be procured from the president of the Agricultural College or the State University; acts making it a criminal offense to blacklist laborers, to interfere with their right to join unions or to refuse to join unions, or to use deception in securing employes by misrepresenting the facts as to the existence of a strike or by failing to disclose the existence of a strike.

Gov. George E. Chamberlain.

The Legislature elected Charles W. Fulton, Republican, of Astoria, United States Senator on the forty-third ballot. A deadlock had lasted from January 20 until February 21, and its breaking was a signal for a scene of unprecedented rejoicing in the State Capitol.

On June 14 the town of Heppner in eastern Oregon was almost completely destroyed by a flood which resulted from a cloudburst. More than three hundred persons were drowned and property to the value of more than $1,000,000 was swept away. Heppner lay in a narrow valley through which flowed a small stream. Within a few minutes the little river had become so swollen that it carried away bridges and houses, giving the people no chance to escape to higher ground. Relief committees were organized at once, and the entire State responded to the appeals for help.

Paraguay.

Capital:
ASUNCION.

While under the rule of Spain this country was called the Province of Panama, and included all of the territory east of the Andes and south of Brazil, but when the Spanish yoke was thrown off, in 1811, and the new States of Argentina, Uruguay and Bolivia arose Paraguay also became a separate republic. Since then, in 1870, the nation has been compelled to cede 1,328 square miles to Brazil as a war indemnity, and in 1876 the Province of Bermejo was ceded to the Argentine Republic. In 1815 the country was seized by Dr. Jose Gaspar Rodreguez Francia, who ruled as dictator until his death in 1840. In 1842 a National Congress elected two nephews of Dr. Francia joint Consuls of the nation. Two years later a new constitution was adopted, and Don Carlos Antonio Lopez was chosen ruler. Other Presidents were elected under this constitution until 1870, when a revolution brought about a change in government and a new constitution was proclaimed.

The President.—Juan Ezquarra (1902-1906); vice-president, Manuel Dominguez.

The Cabinet.—Secretary of Interior, Ed. Fleytas; Secretary of Foreign Affairs and Colonization, the Secretary of the Interior; Secretary of Finances, Fulgencio R. Moreno; Secretary of Justice, Religion and Public Instruction, Cayetano Carreras; Secretary of War, Antonio Caceres.

The Government.—The President is elected for a term of four years, and the vice-president at the same time and for a like period. The National Congress consists of two Houses—a Senate and a Chamber of Deputies—the members of which are chosen by direct vote, the former in the ratio of one to every 12,000 inhabitants and the latter one to 6,000. The country is divided into twenty-three counties, which are governed by chiefs and justices of the peace.

President Ezquarra.

The Nation.—Paraguay has an area of about 157,000 square miles and a population estimated at about 630,000, of which about 100,000 are Indians. Nearly three-fourths of the territory was national property, but during late years almost all of it has been sold.

Cattle raising is one of the most important industries of the nation, and there is much excellent grazing land in all parts of the country. The growing of yerba mate, or Paraguay tea, is also of much importance, and the land for this purpose, formerly in the hands of the Government, is now in the hands of private individuals or companies. Other industries are tobacco, timber, fruit growing and the cultivation of maize, mandioc and beans. Oranges are exported in large quantities, and attempts are being made to cultivate the rubber plant. Much valuable timber is obtained from the extensive forests, and a great deal of it is exported to neighboring countries and to Europe. There are several agricultural settlements or colonies opened in recent years which have tended to encourage the cultivation of the most paying crops and the development of the stock-raising facilities.

Paraguay contains many valuable minerals, mostly unworked for lack of capital and transportation facilities. Iron is found abundantly in the south and marble in the north, and pyrites, copper and kaolin are plentiful. Concessions have recently been granted to companies to work the mineral districts south of Asuncion.

There is a railway from Asuncion to Pirapo, a distance of about 156 miles, and other lines are being projected. The roads are poor, and transportation generally is difficult and expensive.

There are several private colonies within the republic, and, while all are on a firm financial basis, the Elisa colony is in the most flourishing condition. Started in 1890 by the Paraguayan and River Plata Bank on the left bank of the Paraguay River, about nine miles from Asuncion, in 1902 it contained about 285 inhabitants, exclusive of a floating population of laborers aggregating some 150 souls.

During that year nearly 250 animals were slaughtered and the agricultural products of the colonists were disposed of at good profit.

Patent System of the United States.*

It is not clear to whom is due the credit of the clause in the Constitution which vested in Congress power "to promote the progress of science and useful arts by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries." It was not in the original draft of the Constitution presented to the convention by Mr. Pinckney, May 29, 1787, but on the 5th of September the committee reported five clauses which it was proposed to incorporate in the Constitution, the fifth being the patent and copyright clause as it appears in the Constitution. In the discharge of the duty thus laid upon Congress the organic patent act of April 10, 1790, was passed.

In 1793 a new patent act was passed, which, with certain amendatory acts, remained in force until the act of 1836, when the patent system, virtually as it exists to-day, was established. Prior to 1836 there was no critical examination of the state of the article preliminary to the allowance of a patent application. Since the act of 1836 there have been various enactments, modifying and improving the law in matters of detail; in 1839 an inventor was given the right to use his invention prior to applying for a patent therefor, for a period not exceeding two years; in 1861 the term for a patent, which had been fourteen years, was increased to seventeen years, and extensions were prohibited except as to patents granted prior thereto, and in 1870 the patent law was revised, consolidated and amended; but in its salient features the patent system of to-day is that of the law of 1836.

The first patent granted by the general Government was to Samuel Hopkins, July 31, 1790, for an improvement in pot and pearl ash manufacture. The last patent granted for the year 1889, at the close of the first hundred years of the patent issues, was to William Dreyer, No. 418,664, of December 31, 1889, for an electro-magnetic typesetting machine. These two patents are suggestively symbolical of the progress of the century in invention and manufactures—the first akin to the primitive industries of a new country and the last serving the exacting demands of a highly organized industrial system.

The Patent Office possesses a library of more than 76,000 volumes, the best scientific library in the country. An annual appropriation is made by Congress for the purchase of books. The office transmits to foreign governments publications of patents issued by the United States, for which a sum of about $5,000 is used annually. In return the office receives copies of foreign patents. In a year from 25,000 to 28,000 applications for patents are examined and passed upon, and about 3,000 trademarks, prints and labels are registered. The work is constantly increasing in volume, and no small part of it is the arrangement and classification of patents granted, and the furnishing of printed copies to persons having lawsuits at issue or wishing copies of decisions for business purposes.

*Prepared from the special Patent Bulletin issued by the Census Bureau.

The total number of patents issued during this century of invention was 428,621. The following is a comparative table showing the growth in number of patents issued each decade to citizens of the United States and to citizens of foreign countries.

THE GROWTH OF PATENTS.

Period.	Patents.		Designs.		Patents and Designs.

There is an inter-relation between patents and the manufacturing industries of the closest kind, and a remarkable parallelism may be drawn between the two. As the industries have flourished so have the patents, while, on the other hand, the increasing patents have made possible (because profitable) new and greater industries. Just how closely this inter-action is operative may be traced in the following table:

COMPARATIVE TABLE OF PATENTS AND MANUFACTURES, 1850 TO 1900.

Year.	Patents.				Manufactures.					
	No. Issued. During the Decade.	Per Ct of Increase.	No. of Live Patents	Per Ct of Increase.	No. of Establishments.	Per Ct. of Increase.	Capital Invested.	No. of Wage-earners.	Wages.	Gross Value of Products.

When the Japanese Government was considering the establishment of a patent system, which was created by their Patent Act of March 1, 1899, they appointed Mr. Korekiyo Takahashi a special commissioner and sent him to the United States to gather the data obtainable in regard to our patent system. Answering a question of the examiner of designs, who had been helping him in his research and who had inquired of him its purpose, Mr. Takahashi said: "I will tell you. You know it is only since Commodore Perry, in 1854, opened the ports of Japan to foreign commerce that the Japanese have been trying to become a great nation, like other nations of the earth, and we have looked about us to see what nations are the greatest, so that we could be like them; and we said, 'There is the United States, not much more than a hundred years old, and America was not discovered by Columbus yet four hundred years ago;' and we said, 'What is it that makes the United States such a great nation?' and we investigated and we found it was patents, and we will have patents."

PATENTS IN FOREIGN COUNTRIES.

(From the latest report of the United States Patent Office.)

The following table shows the number of patents issued by the United States, as compared to foreign countries from the earliest period to December 31, 1902. (Foreign figures for 1902 estimated.)

Country.	To 1870 Inclusive.	1871 to 1902.	Total.	Country.	To 1870 Inclusive.	1871 to 1902.	Total.

Note.—The detailed account of the business transacted annually by the Patent Office will be found in the American Year Book.

Pennsylvania.

Capital:
HARRISBURG.

Pennsylvania has an area of 45,928 square miles, and by the census of 1900 had a population of 6,302,115. Between 1609 and 1624 explorers under the auspices of the Dutch West India Company made explorations along Delaware Bay and River, and established forts and trading posts. From 1624 until 1664 they continued in actual possession of both sides of the river without much colonization. Swedes settled along the west bank of the river in 1638 and entered readily into the colonization of that part of the country. In their dealings with the Indians they were markedly successful, following the same principles as did William Penn years later. In 1655 the Swedes were conquered by the Dutch, but retained their language and customs until absorbed in the rapid influx of population that followed the purchase of the country by William Penn in 1681. Philadelphia was founded in 1682. Under the charter granted to Penn by Charles II. the present area of Delaware was included in Pennsylvania and called the lower counties. In 1699 a separate Legislature was granted the colonies, but they remained under the same Governor until the Revolution.

The boundaries of Penn's grant had been indefinite. Those east, north and west were settled without difficulty, but much discussion arose regarding the line between Maryland and Pennsylvania, and it was finally adjusted by the survey of Mason and Dixon in 1767. The settlers of the lower counties were, after the Swedes, originally Friends, or Quakers, and the colony for this reason became the seat of learning and refinement of the Western world long before the Revolution. About 1730 began the German immigration, which peopled several of the counties adjacent to Philadelphia and has given prominence to the history of the State. Following the Germans came an influx of Scotch-Irish, dating from 1715 to 1725. The affairs of the colony were administered under a government framed by William Penn until 1776, when a provisional constitution was formed by Benjamin Franklin. In 1790 a new constitution was adopted. In 1838 provision was made for the election of county officers, instead of their appointment, and in 1850 judiciary officers were made elective. Except for a brief period, when the seat of government was at Oldchester, Philadelphia was the capital during the entire proprietary period. In 1799 Lancaster was chosen as the seat of government, and in 1812 the capital was moved to Harrisburg. During the Civil War raids were threatened by the Confederates, and in 1863 the invasion occurred, culminating in the battle of Gettysburg. During the war Pennsylvania furnished 387,284 troops to the Federal army.

Samuel W. Pennypacker.

Events in 1903.—Judge Samuel W. Pennypacker was inaugurated Governor on January 20 to succeed William A. Stone. In his inaugural address he expressed himself in favor of less profit for capital and more compensation for labor and protection of the right of an individual to sell his labor in the highest market. He commented forcibly upon what he termed the methods of sensational newspapers, and suggested that some means be taken to compel all newspapers to publish the name and address of the editor in order to place the responsibility for articles published.

One of the first acts of the Legislature was to elect Boies Penrose to the United States Senate to succeed himself. The Governor's remarks about newspapers brought before the Legislature a bill known as the Grady-Salus bill, framed to effectually muzzle newspapers. The act was passed by a large majority and was signed at once by the Governor. So drastic was the wording of the law that the publication of the simplest personal item without the person's consent might be termed libelous. The law also requires the name of the editor to be printed on each issue of the paper. The signing of the bill was a signal for most of the newspapers to show their utter disregard for the statute, and Governor Pennypacker was cartooned throughout the State in a manner not always gentle.

Municipal elections were held in Philadelphia on February 17. John Weaver, Republican, was elected Mayor by the usual Republican majority. Other offices were well divided between the two parties. In Pittsburg the Recorder-elect, V. W. B. Hay, made a clean sweep of all employes in his department, causing considerable comment by such wholesale discharges.

The Democratic State Convention for the nomination of candidates for Auditor-General, State Treasurer and Judges of the Superior Court was held at Harrisburg September 2. Three of the candidates nominated were members of the Legislature who had voted against the Grady-Salus Libel law.

Heavy floods in the Ohio, Monongahela and Allegheny rivers caused by the melting snow became dangerous in March, and on the 2d of that month the lower part of Pittsburg was flooded. Much damage was done in the lowlands to farms. The steel furnaces at Sharon were submerged, and at Wilkesbarre several mines were flooded. On July 5 a dam near Jeanette burst, causing a flood in that town. About thirty lives were lost and the property damage amounted to more than $1,500,000. A tornado struck Connellsville on August 28, destroying houses and injuring people. One death from lightning was reported.

Pensions of the United States.

In the history of nations there has been no government which has treated its disabled, its wounded or its superannuated veterans with the liberality of the United States. That this liberality has been abused is undoubted. It was to be expected that, out of the million or so veterans who survived the civil war, there should be some who would use the opportunities given them for taking an unfair advantage of the Government. On the whole, however, the system has worked admirably, and many a family has been saved from want and distress by the generosity of the nation toward those who had been its successful defenders.

The report of the Commissioner for the fiscal year ending June 30, 1903, shows those on the pension rolls to be classified as follows: Revolutionary War—Widows, 2; daughters, 3. War of 1812—Survivor, 1; widows, 1,115. Indian Wars—Survivors, 1,565; widows, 3,169. Mexican War—Survivors, 5,964; widows, 7,910. Service after March 4, 1861 (general laws)—Army invalids, 264,139; army widows, 86,866; navy invalids, 4,142; navy widows, 2,221; army nurses, 624. Act of June 27, 1890—Army invalids, 427,711; army widows, 155,249; navy invalids, 16,010; navy widows, 6,992. War with Spain (general laws)—Army invalids, 8,798; army widows, 3,488; navy invalids, 402; navy widows, 174. A grand total of 996,545.

Removals from the rolls during the year were 47,388, and of the 40,907 deaths 29,123 were soldier pensioners, 27,842 having been volunteers of the Civil War.

It is expected that the death rate among the pensioners during the year ending June 30, 1904, will be about 45,000, and the losses to the roll from other causes will be about 6,000. Owing to the new

laws enacted by Congress the pension roll will probably pass the one million mark during the current year. Ohio has the largest number of pensioners, 102,318. Pennsylvania comes next with 101,164. New York next with 89,921, and Illinois next with 71,627. Alaska has the smallest number, 87.

The disbursements for pensions from July 1, 1790, to June 30, 1805, were $96,445,444. Since the latter date there has been paid out a total of $2,942,178,146, at an expense for maintenance and expenses of the bureau of $95,647,935. There was paid out in pensions during the past year $137,759,654, at a cost of $3,993,217.

The average annual value of a pension is $133.49, and over one-half the pensions are of $10 a month or less. The classification and the number in each class was as follows: $6 a month and under, 129,614; from $6 to $8 inclusive, 344,620; from $8 to $10, 83,696; from $10 to $12, 296,084; from $12 to $14, 22,926; from $14 to $15, 3,732; from $15 to $16, 9,034; from $16 to $17, 43,784; from $17 to $18, 736; from $18 to $20, 7,316; from $20 to $24, 26,216; from $24 to $25, 3,114; from $25 to $30, 14,477; from $30 to $36, 540; from $36 to $45, 3,536; from $45 to $50, 3,254; from $50 to $72, 3,787; from $72 to $100, 77; at $125, 1; at $166.66 2-3, 3; at $208.33 1-3, 1; at $416.66 2-3, 2.

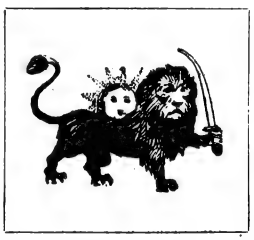
The work of the bureau is managed by ten divisions, each having separate duties, which are carried on under the control of the Commissioner and his two deputies. To these are added five adjudicating divisions, the Eastern, Middle, Western and Southern, and the old War and Navy divisions.

By the acts of July 14, 1862, and March 3, 1873, it is provided that any officer, soldier, sailor or marine, disabled by reason of wounds received or disease contracted in the service and in the line of duty, may be pensioned for such disability during its continuance. In case of his death from causes originating as above set forth, his widow or his child or children under sixteen years of age become entitled to pension. If he left no widow or child under sixteen years his dependent mother, father or orphan sisters or brothers are entitled in the order named.

The act of June 27, 1890, provided that any officer, soldier, sailor or marine who served 90 days or more in the military or naval service of the United States during the late War of the Rebellion, who has been honorably discharged therefrom, and who is suffering from disability of a permanent character not the result of his own vicious habits, which incapacitates him from the performance of manual labor in such degree as to render him unable to earn support, is entitled to pension under this act of not less than $6 a month nor more than $12 a month. In case of the death of any person named above his widow becomes entitled to pension provided she married him prior to June 27, 1890, and that she is without other means of support than her daily labor. If she remarries or dies the child or children of such soldier under the age of sixteen years becomes entitled.

The act of May 9, 1900, which is an amendment of the act of June 27, 1890, provides that in determining inability to earn a support each and every infirmity shall be duly considered, and the aggregate of the disabilities shown be rated. It is also provided that a widow may have title to pension if she is left without means of support other than her daily labor, and an actual net income not exceeding $250 per year.

By the act of August 5, 1892, all women employed by the Surgeon-General of the Army as nurses during the late War of the Rebellion for a period of six months or more, and who were honorably relieved from such service, are granted a pension provided they are unable to earn a support.



There is no law granting service pensions to any person for service rendered since 1858.

Note.—The detailed account of the business transacted annually by the Pension Bureau will be found in the American Year Book.

Persia.

—

Capital:
TEHERAN.

The reigning Shah of Persia is Muzaffar-ed-din, born March 25, 1853, and the second son of Nasr ed-din, whom he succeeded May 1, 1896. He has six sons and twelve daughters. The royal family is very numerous, there being some thousands of princes and princesses, but the official year book only mentions two uncles, two aunts and about one hundred great-uncles and cousins of the Shah. The present Shah (master of the lives and goods of his subjects) is the fifth of the dynasty of the Kajars, which took possession of the crown after a civil war extending from 1779 to 1794. It is within the power of the Persian monarchs to leave the crown, without regard to the natural heir, to any member of their family, preference being usually given to a prince whose mother was a Kajar princess, which the mother of the present Crown Prince is not. The form of government is similar to that of Turkey. All the laws are based on the Koran. The Shah is regarded as Vice-General of the Prophet, and as such claims implicit obedience.

His Executive Cabinet is composed as follows: Prime Minister, H. H. Ali Asghar Khan, Amin es Sultan; Minister of Foreign Affairs, H. E. Mushir-ed-Dowleh; Minister of the Interior, H. E. Dabir-ul-Mulk; Minister of War, H. H. Amir Kahn, Sardar; Minister of Commerce, H. E. Vakil-el-Molk; Minister of Justice, H. E. Amin Khalvat; Minister of Agriculture and Domains, Nassir es Saltaneh.

The country is divided into thirty-three provinces, which are controlled by governors-general. The country, which extends about 700 miles from north to south and 900 miles from east to west, contains 628,000 square miles, a vast portion of which is an absolute desert. The population in 1900 was estimated at from nine to nine and a half millions, of whom not over 1,000 were Europeans.

Shah of Persia.

Of this population about 8,000,000 belong to the Shah's faith, 800,000 are Sunnis, 9,000 Parsis, 35,000 Jews, 45,000 Armenians and 25,000 Nestorians.

There are a number of colleges supported by public funds, in which students are instructed in religion and Persian and Arabic literature, as well as in certain scientific subjects, and many schools for children, while private tutors are very common. The bulk of the population, however, is taught only to read the Koran. The revenue for 1900 is estimated at about $7,500,000, while there is no recent record of expenditure.

The Persian army numbers about 105,000, but of these only half are liable to be called upon for service, while the standing army does not exceed 24,500.

The product of the country, besides grain, is chiefly silk. The pearl fishery, of which there are no records, is also an important industry. The mineral products are considerable, but want of good roads and distance from markets have prevented any considerable development of them.

In 1901-02 the imports were valued at $27,920,000 and the exports at $7,414,840.

A railway six miles in length was opened in 1888 and is in the hands of a Belgian company. The river Karun, at the head of the Persian Gulf, has been open to foreigners as far as Ahwaz. There is a system of telegraph with about 4,800 miles of line. The first regular postal service was opened in January, 1877, but no statistics are obtainable.

The Russian Government is making strenuous efforts to control the trade of Persia, but England is bound to maintain her rights in the country, and the

rival efforts may result in a serious clash between the two countries.

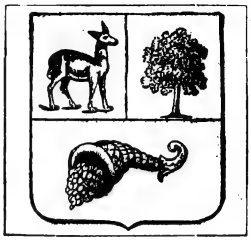
Events in 1903.—The Persian Government feared a pro-British rebellion in the early part of the year, and steps were taken to rid the country of those suspected of being dangerous to its welfare. Prince Ein-ed-Duleh was transferred from the office of Governor of Teheran, the capital of the country, to a province, where he would be less able to stir up sedition. In May an agreement was declared to exist between Persia and Russia whereby no railroads shall be constructed in Persia except by Russians or the Russian Government for ten years from the accession of the present Shah.

Serious disturbances occurred in the province of Zezd, southern Persia, in the latter part of June, caused by a popular outbreak against a sect of religious reformers called Babis.

Peru.

—

Capital:
LIMA.



When Pizarro discovered Peru he found a great nation enjoying a second epoch in civilization. Of the first but little has been told in the traditions of the Incas. Those inspired monarchs had found and submerged it beneath the new and more refined religion of the divine light and the sublimely perfect communism they brought with it. Constant employment of the people in systematic labor and organized recreation, without oppression or tyranny, with no rank of wealth, among a race too gentle to be ambitious, too docile to be vicious, produced a state in which the Spanish adventurers who conquered the land found industry, virtue and contentment. It was the highest type of civilization yet reached on this hemisphere, and probably the highest of which the aboriginal American was capable.

In the beginning of the present century Peru had become the centre of Spanish power on this side of the Atlantic. The more distant provinces of Chili and Buenos Ayres were first able to throw off the Spanish yoke, but the destruction of Spain's power was essential to their continued independence. The conquest of Peru depended on the command of the sea, and in 1818 a fleet of six vessels was fitted out. In 1820 an army landed on the Peruvian coast and marched on Lima, where it was enthusiastically received, and on the 28th of July, 1821, the independence of Peru was declared. From this time on there was a succession of revolutionary outbreaks at intervals of from two to fifteen years until 1855, from which time, with the exception of a local insurrection of little importance, there was peace in Peru until the outbreak of the Chilian war in 1879. The present constitution was formed in 1856 and revised in 1860. Slavery and the Indian tribute of the mita—only another name for slavery—were abolished by its provisions. The unexpected declaration of war by Chili in April, 1879, found Peru totally unprepared on land and sea for the conflict. She fought for five years, however, the people showing unexampled patriotism and devotion, when, the Chilians being successful, a treaty of peace was signed and was ratified March 8, 1884. A Constitutional Congress met at Lima on the 30th of May, 1886, and General Caceres was unanimously elected President of the republic. His task was a most distressing one. The country was utterly ruined. The pall of death covered every household. The loss of the flower of the country's manhood on the field of battle had greatly reduced the population. The treasury was empty. The army was reduced to an effective force of 2,400 infantry, 600 cavalry and 500 artillery. For police there was a gendarmerie of 2,400 men, while the navy was reduced to two small vessels. The administration of General Caceres was a constant struggle with adverse circumstances, but he succeeded in restoring perfect order in all parts of the republic and in every department of the Government. He retired August 10, 1890, and since then, as during his incumbency, Peru has been in possession of a firm and stable government, under the influence of prudent, far-sighted statesmen, who devote themselves to the material development of the country and the elevation of its people.

President Candamo.

The President. — Manuel Candamo was elected President in May, 1903, and was installed in September. Dr. Alarco was chosen first Vice-President.

The Ministry. — The Ministry as constituted in 1902: President of the Council and Minister of the Interior and of the Police, Dr. A. Deustua; Minister of Foreign Affairs, Senor Anibal Villegas; Minister of Justice, of Public Instruction and of Worship, Senor Jose Viterbo Arias; Minister of War and Marine, Senor M. F. Diez Canseco; Minister of Finance, J. J. Reinoso; Minister of Public Works, Senor Teodoro Elmore.

The Nation.—The Constitution of the Republic of Peru is modelled after that of the United States, as the executive power vests in a President, who exercises these functions through a Cabinet of Ministers and the legislative power in Congress, composed of a Senate and a House of Representatives. In Peru, however, there are two Vice-Presidents, but they have practically no duties to perform except in case of the death or incapacity of the President. These three executive officers are elected for a term of four years by the direct vote of the people, and they are not eligible for re-election until after another four years have passed.

The Senate is composed of forty-eight members, who are required to have an income of about $1,000 per annum or to belong to one of the learned professions. The House of Representatives contains 108 Deputies, and once in every two years one-third of the members of both branches are retired by the drawing of lots. Senators and Deputies are then elected by direct vote to fill the vacancies.

While the Peruvian Constitution provides for absolute political equality, it does not permit religious freedom. The Roman Catholic Church is the national church, and although there is a certain amount of toleration shown the advocates of other religions, the constitution stipulates that the practice of any other faith shall be prohibited. Until 1897 non-Catholics were unable to contract legal marriages.

Free public schools are supported by the municipalities, and elementary education is compulsory. High schools are maintained by the government in the capital of each of the departments, and there are several good universities in the country at which the cost of attendance is nominal. The Universidad de San Marcos, at Lima, is the most ancient in America, its charter having been granted by Philip II. in 1572. Lima has a public library.

Peru is largely an agricultural country, and its mining interests are also extensive. In 1900 there were more than 5,000 mining claims in operation, and gold, silver, copper, lead, zinc, quicksilver, coal, sulphur, salt and petroleum are among the products which are found in paying quantities. The value of the ores of all metals exported in 1901 was in excess of $17,000,000.

In manufacturing industries Peru has made more progress than many of the South American republics. Straw hats are plaited, coarse woollen cloths and blankets are woven, and there are several cotton mills. Among the other articles manufactured are beer, boots and shoes, candles, cigars, clothing, furniture, lard, matches, olive oil, saddlery and wines. Nearly all the rich guano deposits, which were formerly under the control of the Peruvian Company, reverted to the Government in 1901, and when those that are still in the possession of the corporation have been reclaimed the work will be conducted as a national monopoly. Coal is reported to exist in Hualgayoc. It is as an agricultural country, however, that

Peru holds highest rank, and its chief productions are cotton, coffee and sugar. Cocoa, rice, tobacco and maize are also grown; rubber is collected in large quantities, and the exports of cinchona, dyes and medicinal plants represent a large part of the annual income, while the exports of hides and wool amount to almost $4,000,000 a year. In 1901 the exports amounted to more than $42,000,000, while the imports were about $27,000,000.

The financial statement for 1901 places the revenues of the country at about $15,000,000 and the expenditures at about $14,000,000.

Events in 1903.—As ex-President Romana said in his last message to Congress, the peaceful meeting of that body this year marked the definite triumph of law and order in Peru, after a wave of political feeling which was most threatening. Moreover, as the concord now existing is the result of sacrifices made by the various parties, there seems to be little reason to fear that it will be disturbed. In view of these facts, therefore, the election of President Candamo was in the nature of a compromise, and as he has the support of all factions it is believed that he may even be able to settle such old standing disputes as the Tacna and Arica matter, an achievement which would give Peru a clean bill of health for the first time in many years.

During the Spring locusts invaded the Department of Cuzco to such an extent as to seriously threaten the crops. By prohibiting the shooting of birds and by taking other drastic measures the Government succeeded in exterminating the pest before the loss became total. The Government was equally successful in preventing the spread of the bubonic plague, which broke out in the suburbs of Callao. The official investigators believe that the disease had its origin in a shipment of rice which was brought from Bangkok and landed at Pasco. The plague, however, was confined to the flour mill in which it first broke out, and of the five persons attacked only three died.

On May 25 the new gunboat Loreto, which was built at Birkenhead for the Peruvian Government, sank forty miles off the Scilly Islands. It is surmised that the boat was so strained by the heavy swells in the Irish Sea that her seams opened, letting her heavy machinery drag her to the bottom.

Philippine Islands.

Capital:
MANILA.

HARRY H. CULVER,
Manila, P. I.

Despite the ills and obstacles that have blocked the way to prosperity in these Islands in the last year, the insular finances are in quite a satisfactory condition. Revenues have grown, and, while there have been some very heavy expenditures, the Government still has a comfortable balance to its credit. To have attempted to restock the plantations upon the resources of the Government would probably have forced us into debt, but happily the generous American Government came to our relief with a magnificent gift of $3,000,000, and we are spared the embarrassment. The money spent upon farm animals is to be returned to the treasury after it has served its first purpose, and will then be used for some permanent improvement—probably highways, which are much needed in nearly every section of the islands. A portion of the money will likely be used in founding an American university, now demanded to crown our educational system.

The customs collections continue to be very satisfactory, with material gains, and the increased figures are being maintained in a manner that is very assuring.

The pacification of the islands is entirely completed, except in the Moro country, which now is receiving the attention of the authorities, who have drafted a measure giving the Moros a military form of government. The complete tranquilization of the islands, so far as ladronism and robbery are concerned, has not as yet been effected, but very rapid progress is being made in accomplishing that end.

To the casual observer ladrones look as if most of ther were mere boys who are incapable of judgment or of realizing the full seriousness of the step they took when they joined themselves to those bands which have been insanely operating against the established government and generally committing acts of violence and lawlessness. In spite of their youth, however, the evidence against them showed they were full-fledged ladrones, or "revolutionarios," and the constabulary officers aver that they make the most dangerous class of ladrones, as, on account of their youth, they can frequently go where older men would arouse suspicion. However, the work of suppressing ladrones is going on very satisfactorily, and is practically all being done by Filipinos. The Filipino scouts are natives, with American officers. All the fights that now occur between our forces and the ladrones are fights between brown men and brown men. The United States army performs the same function here as in the United States. It is a reserve force, to be called on in cases of necessity.

Gov. William H. Taft.

Those who have given attention to the general drift of things political in these islands during the past year have doubtless noticed the gradual revolution which is taking place in the Government's attitude toward the Filipino people. The very benevolent policy with which our civil government was ushered in some two years ago has of late been taking on a somewhat sterner and more sober aspect. The Federal party, from which so much was expected, is at present little more than a name. It evidently accomplished what it believed was its mission, and now, when its services would seem to be sorely needed in the work of preaching the benefits of peace and the perils and destructiveness of dissatisfaction and disorder, it has lapsed into a most regrettable desuetude. But while the Federal party has apparently retired from further active service, a most pernicious counter activity is being shown by those whose influence is for evil. One cannot but notice that since the lull subsequent to the close of the war a reaction has taken place among the people, and this is being used by these breeders of disaffection and sedition to swing the people away from the paths of peace and contentment. It is largely as a result of such pernicious agitation that the Government at this time finds itself compelled to restrict the liberality of its policy. In face of sedition it has no other option. But it is the Filipinos themselves who suffer. For every swing on their part toward disaffection and treason there is a corresponding swing on the part of the Government toward stringency and severity. If they find that privileges are withdrawn and that the lines grow tighter they will have themselves to blame.

The welfare of the Phillippines at this time demands that the fullest possible assistance shall be given by the United States to develop and utilize the prolific natural resources of the islands. They are valuable if used; not otherwise. This can be done by putting a moderate tariff on tropical products and allowing free entry to the United States. Even supposing that such a policy should compel those of the mainland to pay a few cents more per pound for the various commodities it would not be any real loss, as the money would only go out of one national pocket into the other. But there is a broader view. Development of the resources of the Philippines will create work for the people, and work at fair wages is a better pacifier than an army of soldiers, and less costly. The working people have no time or inclination for conspiracies and insurrections. The islands are a part of the cession to the United States at least, and they are entitled to the generous consideration of our people. But, as it is

now, it is impossible for the Philippine manufacturer of cigars to send his goods to the United States without paying as a duty a tariff amounting to 75 per cent of the Dingley tariff, or 75 per cent of $4.50 per pound and 25 per cent ad valorem in addition.

The method of production in the islands is very crude and the labor is unreliable; but with the help that would come with the reduced tariff we would not be able to produce enough to affect injuriously the producers of sugar and tobacco in the United States. Such action on the part of Congress would afford a stimulus to American capital to enter the islands, and it would afford help and encouragement to the people, who have suffered enormous hardships because of the devastation of the war and the ravages of the diseases that have caused such losses to them in the taking off of their cattle and horses.

Commercially speaking, conditions are bad, and many Americans, discouraged with the way things are, or are going, are leaving the islands. As to the causes assigned for such a state of affairs—the reduction of the army, the lack of sufficient and efficient labor, the backwardness of agriculture, etc.—while they doubtless account to a large extent for the migration which has taken place, yet there is another factor which, I think, has also contributed largely to bring about the present exodus. I refer to the manner in which the American colony out here has been formed. As is known, a considerable, if not the major, part of the American population of the Philippines has come from the army of occupation. When the volunteers went home those who remained naturally had to adapt themselves to what there was to do. They came here primarily to fight and not to work, and had, of course, nothing definite in view in regard to what profession or sphere of labor they should enter. The result has been that many have been occupied in positions more or less temporary and unsatisfactory in their nature. Being here and desiring to stay, for a time at least, they have contented themselves in many cases with places which have been makeshift and contingent. Naturally, when the period of depression arrived and stringency and contraction became the order of the day they found themselves affected, and, their position not being firm and secure, it became advantageous to move.

In the future I look for Americans who come here to have something definite in view and to have the means to carry it out. There are abundant opportunities here for the right kind of men. Especially is this true in the line of manufactures. With labor-saving machinery and up-to-date methods there is scarcely a branch of human industry which could not be made richly remunerative. Such factories as we now have pay well, and tend to prove that others would likewise prosper. We could have more hat and match manufactories, and there is also an opening for more lumber mills, for paper mills, for wood and cabinet work, for tanners, for potteries and for other industries where modern, labor-saving devices could be brought into play. For American capitalists who embark in such enterprises I believe there will be ample dividends in return, and in the future I look for such a class to come here. Such outgoings or migrations as the present will then be things of the past.

Within the past two or three months the northern province, which promises to be our Klondike and our health resort, has experienced a renewal of public interest in its welfare, and there are indications that a gratifying impetus will be given to its efforts for proper recognition. Perhaps the most important of the recent events which have been chronicled, and the one which is most likely to be pregnant and far-reaching in its results, is the visit of the Commission, making Baguio, Benguet, the permanent Summer seat of government. With the benefit likely to be derived from the presence of Governor Taft and the Commission at Benguet there have come of late very favorable and auspicious reports of the mining prospects in that section. These have not generally been made public, those interested saying that so many "salted" stories have been sprung on the people of Manila that they have now become skeptical of even the truth, and it would be almost useless to try to interest local capital in developing even honest and promising claims. They say they prefer to wait until the time is ripe and all their plans perfected before making generally public any more reports of their "finds." Should it be that these discoveries are as rich as those who have made them claim Benguet will undoubtedly experience what is known as a mining boom.

Congress gave us relief by passing the Constabulary bill, which authorizes the employment of the native Filipino scouts who are now enlisted in the regular army for the suppression of ladronism in the islands, with regular army officers; $3,000,000 for the benefit of agriculture, and a currency based upon the gold dollar as a standard. All of that legislation has been of great benefit to the people here in the islands.

The negotiations in the Philippines between the Vatican and the United States regarding the sale of lands held by the friars and the removal of the native monks from the islands was called off by Pope Pius X. on September 29. Mgr. Guidi, sent to Manila as apostolic delegate to conduct the negotiations, was recalled. It has been decided by the Vatican that hereafter Philippine Islands questions must be dealt with directly by the Pontificial Secretary of State and by the Government at Washington, or by a special representative of the Holy See, sent to the United States from Rome. The failure of Mgr. Guidi's mission has been set down to the fact that he would not accept the price offered for the friar lands by the United States Government.

The Philippine Commission has the earnest co-operation of the best people of the islands. The subject of independence, as a fact, is receiving very little attention from the Filipinos. They are rather looking to the immediate need for an improvement in the conditions in the islands, and in doing that they assist the Commission in its work.

From now on, whether from general policy or from the press of necessity, I look for a gradual recession from the impossible leniency and liberality which have hitherto characterized our dealings with these people. It is to be regretted that such a reaction is taking place, but under the circumstances it seems inevitable.

Historical.—The Philippine Islands, ceded to the United States by the treaty of December 11, 1898, consist of an archipelago embracing an extent of sixteen degrees of latitude and nine degrees of longitude. There are 1,725 islands in the group, with a total area of about 122,000 square miles and an estimated population of 8,000,000. The island of Luzon is the largest, having an area of 47,238 square miles, and Mindanao is second in size, measuring 36,237 square miles.

The Government is composed of a civil Governor and seven Commissioners, of whom four are Americans and three Filipinos. There are four executive departments—Interior, Finance and Justice, Commerce and Police, and Public Instruction. There are thirty-nine provinces, each with a Governor, Secretary, Treasurer, Supervisor and Prosecuting Attorney. The Provincial Governor is elected by the people through the Municipal Councillors of the towns, who are elected by direct vote. There is a Supreme Court, with seven judges, and fourteen judicial districts. Policing is done by native constabulary, under American inspectors, and by municipal police.

The chief products of the islands are hemp, sugar, coffee, copra, tobacco leaf, cigars and indigo. Some gold mining is carried on in Luzon, and coal is mined in Cebu, where transportation facilities prevent a large output. Copper, silver, lead and iron are also found in the islands, and sulphur, marble and kaolin are mined in paying quantities.

Events in 1903.—The largest investment by an American in Manila was reported in March, when a company of New York men received a franchise for an electric railroad and an electric light, heat and power plant, to be constructed at once. The electric road is to be thirty-five miles in length and will connect Manila and the suburbs. The syndicate will pay 2½ per cent of gross receipts for its franchises for fifty years. The American Federation of Labor sent a delegate to the country in February to inquire into the industrial conditions there. It was said that any effort to have Chinese laborers admitted would meet with a vigorous resistance by the labor unions. The proposed destruction of the walls of Manila, the only walled city in the islands, has been abandoned on account of instructions given Governor Taft by the Secretary of War. On May 19 2,000 native houses in the Tondo district of Manila were destroyed by fire, rendering 8,000 persons homeless.

On May 16 a hurricane devastated Santa Maria, Balacan and Luzon. Severe and continued earthquake shocks disturbed Guam in February and raised the level of the island fully six inches.

It was reported in June that the Philippine Government was preparing, with the approval of the War Department, to create an opium monopoly to sell to the highest bidder. The bidders were to be confined to Chinese and the concession was to hold for one year.

Ruperto Rios, a fanatical Filipino leader in the province of Tayabas, was convicted of murder in May and sentenced to be hanged. Twenty-seven of his followers were also convicted and sentenced to various terms of imprisonment.

View of Newport Harbor, Made with an 18x72 Panoramic

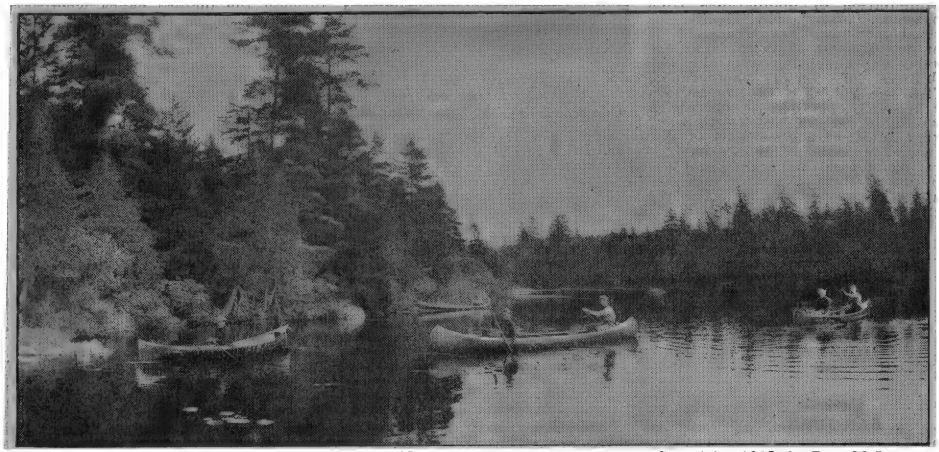
Photography in 1903.

BURR McINTOSH.

Photography as a science has advanced quite as rapidly during the past year as almost any of the applied arts.

It is only within the past few years that it has been thought worthy of being regarded as a real one. Everybody who is at all interested in photography is aware of its history from the time of the introduction of the first daguerreotype in 1832 and on through the various stages of development. It is not with the dry scientific features that we have to deal in the present article. Photography very closely resembles some other arts in many ways, and is very similar to one with which it is closely allied in a business sense—the stage. The stage is one of the noblest arts and one which gives us as much genuine delight as any other. There are artists of the higher grade on the stage—men and women who have the dramatic sense to create what have truthfully been described as masterpieces. Experience is not a necessity in producing these impressions. The younger man or woman may be born with what can only be described as a "divine spark," or with genius. Others who have been in the business for a great many years are loathe to give these the credit for their abilities, and present the argument that they have been in the business twenty, thirty or forty years, and, therefore, must of necessity be able to present more artistically, more faithfully, the pictures which they have been called upon to produce. Photography is in this regard very closely allied to the stage. There are thousands who are contented to remain on a certain level. A few of these may possess an ambition or desire to rise to a higher sphere, but those who have both the brain, knowledge and ambition to occupy original positions are so comparatively few that almost every one is known to the general observing public. It is to the men who have original thoughts and create new artistic effects that the art of photography must look for its future guidance.

Paris Figaro's 1,000 Franc Prize Picture.
(Won by Mr. McIntosh against more than 30,000 competitors; copyright, 1903.)



Silver in its primitive state must be mined by those who are best fitted by nature to seek it in its seeming security; afterward it must be separated from its earlier surroundings by the aid of the brains, hands and experience of others. Later it is converted into its best state for manufacturing purposes. Many people who may own it up to this time are content to dispose of it to the manufacturer of Mexican or Chinese silver coins. Others seek various modes of making it more valuable. It is from this point that various artists bring their skill, experience and artistic taste to render it in some instances almost invaluable. The amount of steel used in the average railroad rail of to-day, if converted into fine watch springs, would be of inestimable value; so with silver developed into the highest state; so with photography. It is not the mere cost of the paper upon which photographs are printed, of the plates upon which the likenesses are imprinted, or upon the men who do the routine work which finally results in the finished picture. It is primarily the ability to reproduce a faithful likeness, then to add an artistic pose, coupled with a background and lighting effect which combine to create a homogeneous whole which, when it confronts you, impresses with its conglomerate completeness. The mere fact that one has a pretty face before the camera does not in any sense guarantee that a beautiful and artistic photograph will be presented. There are many women of beauty to-day who, from years of experience, are natural posers, who may sit for twenty or thirty exposures in one day and not find one satisfying result. Upon other occasions they may find nine-tenths of the attempts to reproduce them successful. It is to the ability to reproduce faithfully and artistically acknowledged beautiful subjects that the art of photography owes its greatest advancement. Fifteen or twenty years ago most of our large weekly publications em-

Camera, with One Exposure, Covering an Arc of 180 Degrees. Copyright, 1903, by Burr McIntosh.

ployed an enormous staff to reproduce drawings of people and events. To-day the camera, which tells the story in so infinitely graphic a manner, is relied upon almost wholly for results. People in the United States are no longer content with drawings. They must have photographs. In England the late Boer War was depicted in nearly all the illustrated publications through the channels of the artists who of necessity were compelled to draw largely on their imaginations. During our recent conflicts in Cuba and in the Philippines no illustrations ever satisfied the American public, which has been so keenly educated up to photographic reproductions, except those that were actual photographs. The ones that were taken during the greatest stress, in the midst of the greatest danger, were infinitely more valuable. It is the keenly alert daily newspaper which has educated the people up to this condition. To-day it is an ordinary occurrence for a flashlight photograph to be made of an event at 9 or 10 o'clock at night, and to be faithfully and well reproduced in a morning paper, which goes to press within the next three hours. There have been actual instances in New York during the past year of photographs made after the result of a storm which have been reproduced and on sale in the streets within less than two hours. That is not art, but it is what enables art to exist—it is business. The greatest progress, because of the fact that it is most interesting, has been made in the development of the panoramic photographs. For years we have been familiar with small cameras which reproduce everything within a radius of 100 or 120 degrees. They were, of necessity, distorted, but science has developed the panoramic camera until it is to-day almost perfect. The large photograph reproduced at the head of this article was made with the aid of a camera which makes a photograph 18 inches high and 72 inches long, covering an angle of 180 degrees. On a clear day every object within a distance of seven miles can be faithfully reproduced. This is at present the acme of panoramic reproductions as far as size and scope are concerned. What the future may bring forth can only be surmised, but anything larger than this must be regarded, until proved differently, to come under the head of freak creations.

No photographs of nature or country scenes are more complete or more perfect than an average 12x24 panoramic reproduction, which covers an area of 140 degrees. The beauty of these cameras is that they are, because of the small portion of the film exposed at any one time, almost instantaneous. The acme of these results has been obtained during the last few months. A photograph similar to the one reproduced at the head of this article was made at the finish of the last Yale-Harvard boat race. It was instantaneous, and was taken the second the judges' boat fired the gun, which declared that the race was over. The smoke is seen coming from the gun, and the outlines of the oars of both crews are absolutely sharp, as is the position of each person and every flag in the line of vision.

A Nature Study. Copyright, 1902, by Burr McIntosh.

Color photography has made no well-defined advancement. The Ives process, which is unquestionably the most faithful reproducer of color, is at a standstill. With the aid of what is called the "kromskop" photographs of paintings, bric-a-brac and scenery are faithfully reproduced, but as this entails looking through a set of glasses which combine the three primary colors, red, green and yellow, it is robbed of any practical value. There are to-day hundreds of photographers who are able to repro-

duce colored effects by combining the printings from three negatives made through screens of the three primary colors, but no matter how well these may be done, no copy can faithfully reproduce nature. Color photography seems as far from realization as at any time during the last ten years. The man who will be able to make a chemical combination which will result in faithful reproductions of nature will make one of the greatest fortunes of the age, as well as being a benefactor to the entire art-loving world.

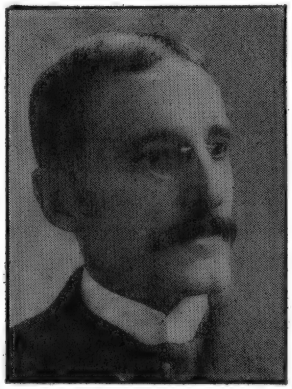
Photography in the astronomical world has made a very distinct advance during the past year, and the stellar universe has yielded through the aid of the delicately sensitive plates which have been employed in these researches results which have proved to be of incalculable value to the seekers after astronomical knowledge. In the estimation of the writer, valuable developments during the coming years will be found in the manipulation of photographs from balloons. Many scientifically inclined men who are interested in the development of photography are to-day experimenting with the possibilities of aerial photographs. With the aid of a captive balloon it is easily possible to operate a panoramic camera which will show every detail of a given part of the country for a distance of ten miles. The inestimable value of this in the making of local maps and for kindred reasons, to say nothing of the far greater value during times of war, cannot be overestimated. The time will come, and very shortly, when the captive balloon will be completed which will enable the large panoramic photographs to be made and sent to the ground for development. Then, in less than an hour, the exact location of every armed force within a radius of ten miles may be shown. The value of this to the combatant cannot possibly be estimated. One of the most interesting phases of outdoor photography to-day is the new rapid camera. It is now possible to make, with the aid of the latest invention, an exposure in one twelve-hundredth part of a second. Horses, trains or anything in action must of necessity be absolutely halted on the plate which is given this aid. There is no more interesting study to-day than the development of instantaneous photography.

One of the most interesting fields which has been developed within the past few years, and more dur-

Three Examples of Artistic Posing of One Subject.
Copyright, 1903, by Burr McIntosh.

ing the last year than in all others, is in advertising. Many people to-day can truthfully say that they look through the advertising columns of a publication with almost as keen an interest as they do through the picture pages, whereas a few years ago they were seldom opened. The reason for this is that bright and attractive reproductions are seen on these pages, not only of thoughts from the minds of clever men who devise them, but for the fact that some pretty and interesting face peers out at you. There are to-day hundreds of girls making their living as photographic models in this entirely newly developed field. A drawing is as relatively effective in this regard as it is on the illustrated pages. People prefer reality, and when a clever advertisement is enhanced with the aid of a pretty face or figure the investment is infinitely more valuable.

Porto Rico.



Capital:
SAN JUAN.

Porto Rico has an area of about 3,668 square miles, and by a census made in 1899 had a population of 953,243. Porto Rico is the smallest of the Greater Antilles, and was discovered by Columbus in 1493. In 1509 it was invaded by the Spaniards, under Ponce de Leon, who rapidly exterminated the natives and established Spanish settlements more or less permanent. The island remained under the dominion of Spain until December 11, 1898, when it was ceded to the United States by the treaty which ended the Spanish-American War. The Government of Porto Rico is administered by a Governor and Cabinet appointed by the President of the United States. The Cabinet, with five other persons, constitutes an Executive Council, of which at least five members must be natives. This constitutes the Upper House of the Porto Rican Legislature. The House of Delegates, or the lower branch, consists of thirty-five members, elected, five each, from the seven provinces of the island. The franchise is restricted by a small property qualification and an easy educational test. The Executive Council may refuse to pass acts passed by the House of Delegates, and the Governor has the usual power of veto over the acts of both Houses.

Agriculture is practically the only industry in Porto Rico, nearly 79 per cent of the total population of the island living in the rural districts. Sugar, coffee and tobacco are the principal products, though fruits and vegetables are raised in quantities for export as well as for home consumption. The sugar industry has been stimulated since United States occupation, and there is a demand for Porto Rican coffee in Europe, where it is liked better than in the United States. Almost the entire product of the tobacco fields goes to the United States for manufacture. Orange, pineapple and vegetable plantations have been started by people from the United States and are giving promise of becoming successful. There is scarcely an acre of land on the island that is not suitable for cultivation, and the climate and the nature of the soil preclude any danger of famine, even though the population were trebled.

Events in 1903.—The third session of the Porto

Rican Legislative Assembly was convened on January 12, at San Juan. The Federal party was represented in the House of Delegates for the first time. Manuel F. Rossy was re-elected Speaker, and Charles Hartzell was elected chairman of the Executive Council. On the 14th Governor Hunt delivered his annual message, recommending the cession of Culebra Island and certain land of San Juan to the Federal Government for naval purposes; advising a limitation of appropriations; suggesting that the jurisdiction of the Supreme Court be enlarged and constituted a Court of Appeals. The Legislature adjourned March 14. Measures transferring land to the United States, founding the Porto Rican University and establishing a Board of Medical Examiners were the important bills passed. The House of Delegates voted unanimously to address a memorial to the United States Congress praying that Territorial government be granted, that the Constitution be extended to that country and that the Executive Council be made a legislative body with full legal powers. On March 16 E. B. Wilcox was appointed Judge of the District Court at Ponce, and Charles E. Foote, of Lexington, Ky., was appointed to a like office at Humacao. Attorney-General James S. Harlan resigned his office on March 17 and started for the United States to resume law practice in Chicago.

Gov. William H. Hunt.

Jose Ramon Latimer was appointed Mayor of San Juan on February 17, to succeed Manuel Egozcue, who had been removed on charges. Mateo Fajardo was removed from the office of Mayor of Mayaguez in May, and Leopold Cabbassa was appointed in his place.

The municipal police of Mayaguez were removed in April and insular police substituted for them, and the Chief of Public Works was arrested on the charge of frauds amounting to $20,000.

Wholesale smuggling resulted in an investigation by the Treasury Department of the Federal Government. Evidence was brought out that showed some thirty persons—civilians and army and navy officers—to have been engaged in evading the customs laws by bringing in liquors, etc. Complaints were brought against four officers in April and arrests were made. A survey for a trolley line between San Juan and Ponce was completed in August. It is expected that the line will cost about $3,000,000.

Portugal.

—

Capital: LISBON.

The House of Braganza, the reigning dynasty of Portugal, dates from the latter part of the fourteenth century, when Alfonso, an illegitimate son of King John I., was created Count of Barcellos by his father, and, later, Duke of Braganza by Alfonso V. When the House of Avis, the old reigning family, became extinct by the death of King Sabastian's successor, Cardinal Henrique, the throne passed to Philip II. of Spain, but even the fact that he was a descendant of a Portuguese princess did not make the people feel kindly toward their Spanish rulers, and after about sixty years of dissatisfaction they revolted and proclaimed Don John, Duke of Braganza, King. The present ruler, King Carlos I., is descended from this monarch, King John IV., whom historians have surnamed "The Restorer."

Carlos was born September 28, 1863, and was the son of King Luiz I. and Queen Maria Pia, the daughter of the late King Victor Emmanuel II. of Italy. He succeeded to the throne on October 19, 1889. On May 22, 1886, he married Princess Maria Amelia, daughter of Phillippe of Orleans, Comte de Paris. They have had two children.

The Heir Apparent.—The heir apparent to the throne, is Luiz Philippe, Duke of Braganza, who was born March 21, 1887.

The Ministry.—The Ministry of Portugal is constituted as follows: Premier and Minister of the Interior, E. R. H. Ribeiro; Minister of Foreign Affairs and of Finance, F. M. Santos; Minister of Justice and Worship, A. Campos Henriques; Minister of War, L. A. P. Pinto; Minister of Marine and the Colonies, A. T. de Sousa; Minister of Public Works, Industry and Commerce, M. A. de Vargas.

King of Portugal.

The Nation. — The basic principle upon which the Kingdom of Portugal is established is the charter granted in 1826 by King Pedro IV. In the sovereign is vested the moderating authority. The Legislature consists of two chambers—the House of Peers and the Hall of Commons. The hereditary peerage is being gradually abolished, and at the present time the King can appoint not over fifty peers besides those of royal blood. Deputies to the Hall of Commons are elected every four years by the people.

The State religion is that of the Roman Catholic Church, but other faiths are tolerated. According to the census returns, the proportion of the population, including children, that could not read was 82.4 per cent in 1878 and was 79.2 per cent in 1890.

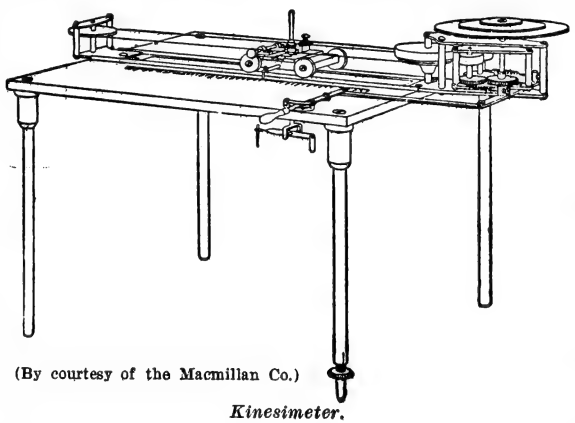
The budget estimate for 1903-04 was as follows: Revenue, $59,319,368; expenditure, $61,063,000. The public debt of Portugal in 1902 was about $846,000,000.

The Colonies.—The Portuguese colonies are to be found in Africa and Asia, but while several of them are thriving and prosperous, practically none of them is self-sustaining. These possessions are:

Portuguese Possessions.	Area Sq. M	Population.	Exports.	Imports.
Africa:				
Cape Verde Islands	1,480	147,424	$356,000	$2,844,000
Guinea	4,440	820,000	332,980	950,800
Princes and St. Thomas Islands	360	42,103	2,038,000	3,525,500
Angola	484,800	4,119,000	5,370,000	7,270,000
East Africa	301,000	3,120,000	6,428,000	11,100,000
Asia:				
Goa (India)	1,390	494,836	?	
Damao and Diu	168	77,454	687,400	2,412,000
Timor	7,458	300,000	135,000	196,000
Macao (China)	4	78,627	14,068,200	17,920,000
Totals	801,060	9,267,444	$29,415,580	$46,217,800

Nearly one-half of the territory of Portugal (45.8) is waste land; about 15 per cent is under cultivation, 7 per cent is in fruit, 2 per cent in vineyards and 27 per cent is used as pasture. Cotton spinning and weaving and the fishing industries are important. The statement of the commerce for 1901 was as follows: Imports, $62,597,440; exports, $30,535,640.

Events in 1903.—During February part of the Portuguese Cabinet resigned, the King accepting the resignation. It was reported that the Cabinet crisis was due to the critical financial position of the Government, report going even so far as to claim that the crown jewels had been pawned to the Bank of Portugal. In his speech from the throne at the opening of the Cortes on January 2 the King spoke encouragingly of Portugal's commercial and financial prospects. On February 28 a new Cabinet was announced, formed by Senhor Hintze Ribeiro, ex-Premier and Minister of Finance, at the direction of the King. The only changes were the Ministers of Foreign Affairs, Finance, Marine and Public Works.



Serious riots occurred in northern Portugal in January as a result of an attempt on the part of peasants to rescue poachers from the police. On March 15 the inhabitants of Coimbra refused to pay taxes and made forcible resistance to the Government officers. Riots resulted, and neighboring villages were aroused. The trouble started on March 11 from a strike of stall holders in the markets against an order to renew their licenses. The courts were attacked and property was destroyed. The tax collectors made their escape at the first outbreak of the trouble. The police and local military were unable to cope with the uprising, and special troops were sent from neighboring towns. Eight dead and a score of injured were reported.

Psychology.

HERBERT GARDINER LORD,
Professor of Philosophy, Columbia University.

Psychology may be defined as the Science of Mind. But in that case both "Science" and "Mind" need defining. By science is here meant natural, or positive, science; by mind is meant conscious process. This separates it definitely from what psychology once was thought to be—a branch of metaphysics. It is no longer an inquiry into the nature of the soul, any more than chemistry or physics are inquiries into the nature of matter. As we take for granted matter in these sciences, and inquire how matter, whatever be its ultimate nature, acts, so in psychology we take mind, whatever be its nature, and investigate its processes; we seek the uniformities in these processes and their relations to each other.

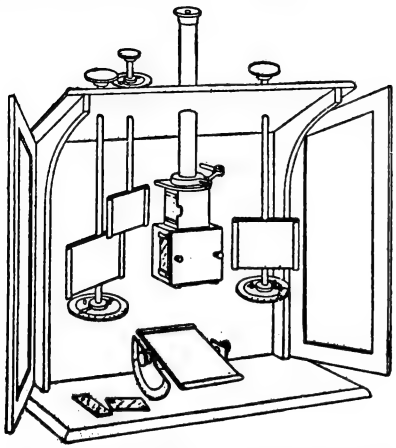
This is a revolutionary change, putting psychology among the natural sciences, and giving to it the inductive method of those sciences. This limitation of the matter to be investigated and defining of the methods, begun some thirty years ago, has already produced excellent results, and promises still greater. As Professor Munsterberg, of Harvard, has expressed it, as the Nineteenth Century has been the century of the physical sciences, physics, chemistry and biology, so the Twentieth century will be the century of psychology. It is likely to transform materially religion, philosophy, ethics, aesthetics, education—in fact, all the theory and practice of life.

(By courtesy of the Macmillan Co.)

Kinesimeter.

Of course, many of the problems that the older form of psychology tried to solve still remain. These, though implied in the modern science, cannot, from the very nature of that science as a natural, or positive, science be solved by it. They belong to that branch of inquiry which may be named rational psychology, or philosophy of the mind, and they fall outside the limits of an inductive science.

This modern psychology adopts in general the methods of the natural sciences, and their assumptions. It observes, experiments, generalizes, verifies, as they do, presupposing those invariable uniformities called natural laws, in the phenomena of mind, as they are assumed in the phenomena of the external world. It has, of course, its own special application of those methods. The method of introspection, for example, is peculiar to it, and it is the foundation of its whole procedure. All observations and experiments of a more external nature get their value for psychology only as they receive meaning and value through the introspection of the observer of mental processes and events within the solitudes of his own mind. Thus it is that the introspective method of the older psychology has not lost its central and fundamental position in the new. But it has added to it auxiliary and regulative methods in those particular branches of the science called physiological psychology and experimental psychology. In the first of these the close and detailed co-relation of nervous activity, particularly in the cortex, or outer surface of the brain, with conscious process, is studied. In the second the conditions of conscious process are fixed by the experimenter, and results are carefully observed, accurately measured and recorded by all manner of ingeniously contrived machines. No hard and fast lines can be drawn between these two objective methods, since physiological psychology without experiment would lose much of its efficiency, as, needless to say, experiment without knowledge and observation of physiological processes would be futile. And both alike are valueless without introspection, which, however, they in turn check and render accurate, by elimination of numberless sources of error to which it is prone. It will be readily seen that these three forms of inquiry into which the one science of psychology, as a natural science, is divided, are really nothing but a matter of emphasis which is placed on one or other of the three methods of study—introspective, physiological or experimental—no single one of which is altogether absent in any case. We have not three psychologies, but one, studied from differing points of view. These three methods, with varying emphasis on one or other, are applied to the solution of a great variety of problems. This gives us a number of special fields of psychological investigation. A brief enumeration and description of some of these will best convey to the reader some idea of the extensive activity in recent years in this special branch of positive science.



There is, first of all, the analysis of the mind of the normal adult, to get some clear conception of its structure and activity, which gives us what is called analytical psychology.

There is next, the question of the evolution of mind. On this psychology builds on the sure foundation of biology and raises a superstructure of mental growth over the substructure of brain growth. It is called in general genetic psychology. It is comparative psychology where the animal mind is studied by necessary comparison with the human

mind, and mind is found evolving through lower forms up through higher, till it reaches its highest form in which we know it in man.

On the basis of this, often, and greatly helped by it, as in turn rendering help of its own, is child psychology, beginning with the first dim dawn of consciousness in the infant, and recording the steps of the process by which it passes through childhood and adolescence to maturity.

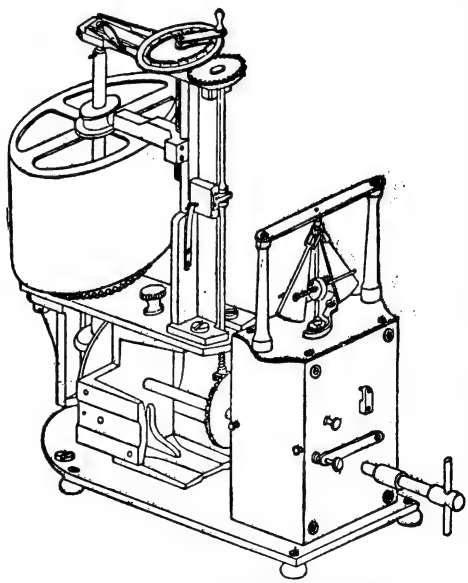
Of great value as these mere rudiments of a science have been already to education, a yet more

Hering's Apparatus for Testing Color Blindness.

(By courtesy of the Macmillan Co.)

extraordinary and revolutionary influence is it found to have as the order of individual mental development and the fixed laws of it are discovered. This gives us educational psychology, the application to mind training of the discovered laws of mind growth.

So far psychology may be thought to have concerned itself essentially with the individual mind. But the mind of man is mind because it is social, and the study of mind as it manifests itself in characteristic ways in social movements and in races opens up a wide, interesting and perhaps fruitful field of investigation. Already we have psychological studies of the crowd, of mobs and panics, of mental epidemics. The Crusades, religious revivals, the flagellants craze, economic panics, the excesses and vagaries, the violences and diabolisms, of all sorts of movements, from the lynching mob, the greenback craze, the South Sea Bubble, to the horrors of Parisian revolutionary mobs, are all believed to be illustrations of mental laws. In this case we have social psychology.



In the same spirit we have had attempted psychology of peoples, a study of the mental characteristics and the process of the development of a nation—like the English—which gives us what will be, if it is ever realized, a race psychology.

It will be sufficient in this general view of the field to mention last abnormal psychology. This is in turn divided into two branches, the first concerning itself with the mental laws of insanity, the second with those of crime.

In order to give an even more impressive view of the wide and intense activity in this sphere of scientific research, it will be well to name and briefly characterize special studies that have been published in the last few years. Of course nothing more can be attempted than to mention a few of the almost innumerable treatises, monographs, review articles that come from the psychological laboratories of universities and the pens of individual investigators. Passing by the many more technical studies, such as concern the relations between mental activity and the circulation of the blood, or those on the special senses, as the location of sound, the perception of space, we may mention such special studies as discuss sleep and dreams, the unconscious cerebration during sleep, the failure of movement in dreams, the failure of memory of dreams, the duration of dreams. Then there may be noted such treatises as discuss separate feelings, as timidity, fear, by Dugas and Mosso; such discussions as concern themselves with particular mental activities, as Duprat on "Lying," "Le Mensonge," or Dugas's "Psychologie du Rire," and Sully's delightful essay on "Laughter," a book of 450 pages, discussing in twelve chapters such questions as the physiology and hygiene of the laugh, the cause of the laugh, the origin and development of it, the laughter of the savage, laughter in art and comedy, the ultimate value of laughter. The list of such things could be made of almost any length. But of equally popular interest are the attempts that have been made to apply psychology to other fields of study. For example we have books on the psychology of ethics, Irons; on the psychology of economics, Tarde; on the psychology of socialism, Le Bar; on the psychology of the fine arts; Dixon's "Psychology of Music." We have, again, books on the psychology of religion, such as James's "Varieties of Religious Experience," sane and broadly sympathetic, yet scientific in the best sense; Marshall's "Instinct and Reason," which finds the basis of religion more deeply founded than in reason. With these might be mentioned such studies as Brewster on "L'Ame Païenne," Bremard's Psychology," published by the Macmillan company, chological analysis of Joseph Smith, in his "Founder of Mormonism." This last is an example of the application of psychological method to the study of the history of religion. In F. W. H. Myers's "Human Personality and Its Survival After Death" we have psychology applied to the solution of the problem of immortality.

After this may come rightly reference to the work that is being done on hallucinations, apparitions, thought transference, or mind reading, double consciousness, hypnotism.

If to the foregoing be added notice of the well-equipped psychological laboratories in such universities as Harvard, Yale, Columbia, Princeton, Clark, Chicago, California and others, and then attention be called to the existence in America alone of two reviews devoted to psychology, besides others of philosophy and medicine, that discuss at intervals psychological questions, and to the fact that this activity is not confined to America, but characterizes, as well, England, Germany, France and Italy,

The Ludwig-Baltzar Kymograph.

(By courtesy of the Macmillan Co.)

enough will have been said to give some impression of what psychology is doing in 1903.

A text-book which is of value to instructors and students in psychology is Titchener's "Experimental Psychology," published by the Macmillan Company. This book embodies the work of a long list of students in the psychological laboratory and is intended as a guide to laboratory work. It contains full explanations of methods and gives tables of results determined by long series of experiments. The pictures in this article are selected from this book.

Railroads in the United States.

GEORGE H. DANIELS,
of the
New York Central
Railroad.

In all the ages of the world transportation has been, as it is to-day, associated directly with the advancement of the human race. It began in the dawn of the world with human burden-bearers; then, in certain countries, the dog, the burro or pack mule; in others the horse, the camel and the elephant, the sailing vessel, the canal-boat, the steamship, the stage coach, the horse car and the railroad.

I think it will be agreed by all that the steam railroad is the highest type of transportation, and when I say that all the money in the world—gold, silver and paper—would not buy one-third of its railroads, one may get some idea of the vastness of the industry. Railroad mileage has steadily grown, until now we have over 200,000 miles of steam railway in the United States. These railroads employ over 1,000,000 men whose wages amount to over $600,000,000 annually. Their capital is over $12,000,000,000, and their earnings last year exceeded $1,500,000,000. They carried more than 600,000,000 passengers and 1,100,000,000 tons of freight.

We are all impressed by the object lessons which are the essential elements of the kindergarten system. I want to present one object lesson in regard to American railways.

In 1851 the American Railway Guide for the United States, published in New York, consisted of 144 pages, 5¼x3¾ inches. It contained the time tables and information regarding 149 railroads. But the Official Guide for the United States for August, 1902, contains the time tables and information regarding 957 railways, requiring over 900 pages, 7⅛x10⅛ inches, to show it. In 1851 there were a little over 9,000 miles of railway open for traffic in the United States. In 1903 there are more than 200,000 miles in operation, with new lines constantly being built and others projected. In order that the German nation might have knowledge of the most advanced theories and practices in the construction and operation of railways, an imperial German commission was sent to the United States a short time ago, for the purpose of examining American railways and making such recommendations as their investigations should suggest.

In the report of the commission, which was recently published, one of the first sentences is as follows: "Lack of speed, lack of comfort, lack of cheap rates, are the charges brought against the German Empire's railways, as compared with those of the United States." They recommend the adoption of many of our methods, explaining in their report that they were far superior, not only to those in vogue in Germany, but also surpass those of any other country on the globe. The annual budget of the Russian Empire discloses the almost incredible efforts in railway extension that the government of the Czar is putting forth. It is a fact not generally known that the two men who are nearest to the Czar of Russia, and who, perhaps, have a greater influence than any of the others in shaping the commercial policy of the present government of that great empire, are M. de Witte, the Imperial Minister of Finance, who, sixteen years ago, was a station agent at a small town on one of the railways of Russian Poland; the other is Prince Michel Hilkoff, who, when little more than a boy, left St. Petersburg to seek his fortune, learned mechanical engineering in the city of Philadelphia, served as brakeman, fireman and in many minor positions, and is to-day Imperial Minister of Railways of the Russian Empire and a member of the Cabinet.

More than twenty years ago one of the Imperial Ministers of China, in a report to the Emperor and Empress, urged upon them the construction of a system of railways from the principal ports to the interior of the empire. In his report he used this significant sentence:

"Japan, which is a mere speck upon the map, is

Photo by Yates.

A Modern Freight Train.
Eighty Loaded Cars Being Hauled by One Locomotive.

building railways, and her people are being benefited thereby. Should not your Celestial Empire, which comprises one-twelfth of the land area and one-quarter of the population of the globe, do as well as this handful of people among the islands of the sea?"

To-day this suggestion is being carried out, and railroads are being constructed in a dozen different directions in China.

Railroads Supersede Canals.—One hundred years ago the Governor of the great State of New York advised his friends not to invest their money or waste their time in aiding to build railroads, expressing the opinion that, while it was possible that improved methods of construction and perfected machinery might, in the remote future, enable the people to move a car upon a railroad at the rate of five or six miles per hour, he did not believe that they could ever be made of material advantage, and that any attempt to transport passengers and freight by railroad from one part of the country to another, must result in endless confusion and financial loss. Notwithstanding this prediction the railroads have grown to such vast proportions that at present there are in the United States more than $200,000 miles of steam railroads.

It is beyond question that American railroads today furnish the best service in the world, at the lowest rates of fare, at the same time paying their employes very much higher wages than are paid for similar service in any other country on the globe.

In the United States the first-class passenger fares in 1898 averaged 1.98 cents per mile, although on some large railways the average was several mills less than 2 cents per mile; in England the first-class fare is 4 cents per mile; third-class fare for vastly inferior service is 2 cents per mile.

In Prussia the first-class fare is 3 cents per mile; in Austria 3.05 cents per mile, and in France 3.36 cents per mile.

Our passenger cars excel those of foreign countries in all that goes to make up the comfort and convenience of a journey.

Our sleeping and parlor car system is vastly superior to theirs; our baggage system is infinitely better than theirs, and arranged upon a much more liberal basis—American railroads carry 150 pounds of baggage free, while the German roads carry only 55 pounds free.

The lighting of our trains is excellent, while the lighting of trains on most foreign lines is wretched.

We thought before the purchase of Alaska that our territory was large, but what vistas of commercial enterprise present themselves to us as we contemplate the fact that it is 3,144 miles from San Francisco to St. Michael's, Alaska, where an empire in extent awaits development by American capital and energy, and that it is 7,729 miles from San Francisco to Manila, island of Luzon, and that this is only one of hundreds of rich islands that await similar development. In contemplating the extremes of our domains we should not overlook the islands which lie in our new Pacific pathway.

You will be interested in knowing that the Manila and Dagupan Railroad on the island of Luzon, which is the principal one of our Philippine group, is laid upon mahogany ties, the road passing through forests of that valuable wood and over inexhaustible beds of coal and other rich minerals. Shall we wonder, then, that American railroads are seeking connections that will secure a portion of the commerce that must come from the development of this rich region, which has so recently been added to the territory of the United States?

Religion in 1903.

REV. THOS. B. GREGORY.

The year 1903 witnessed far more than the customary amount of activity in the religious world.

During the year the various branches of the Christian Church vied with one another in the work of extending the influence of the Gospel both at home and in foreign lands; and it may be said with entire safety that the past year will go down into history as having been one of extraordinary religious effort. Beginning in due chronological order, we may mention the splendid victory that was won by the Methodist Episcopal Church in raising the great "Twentieth Century Fund."

When, in 1898, it was proposed by the Methodist bishops that a fund of $20,000,000 be raised for various church purposes many shook their heads in doubt. Would it be possible to raise so princely a sum? Was not the very idea too Utopian for serious consideration?

But in spite of these doubts the church applied itself to the great task that was before it with a vigor that was commensurate with the dignity of its object, and lo! by the end of January, 1903, the mighty fund was a reality—with several thousands to spare!

In this connection mention should be made of the

action taken by the representatives of the boards and benevolent agencies of the General Synod of the Evangelical Church in the United States, which met during the month of March, 1903, in York, Pa.

At the York meeting a plan was agreed upon to create a "Twentieth Century Fund" for the general use of the church.

The 250,000 members in the General Synod Lutheran Churches were asked to give one cent a day for one year.

The intent of the General Synod was to make the fund at least $1,000,000.

Another of the significant movements of the past year was that made by the Presbyterians in regard to the revision of their creed, known as the "Westminster Confession."

For many years there was more or less agitation in the ranks of the Presbyterian Church concerning certain desired changes in the venerable creed, and after repeated fruitless attempts at revision it was finally voted, at the General Assembly which met at Los Angeles in May of the year just closed, that the proposed revision be made, thus settling the controversy that had to a greater or less extent disturbed the denomination for a couple of decades.

One of the most important articles of the Westminster Confession, as changed by the action of the Los Angeles General Assembly, is that which declares that those dying in infancy "are not lost, but are included in the election of grace, and are regenerated and saved by Christ through the Spirit."

Equally interesting with the action of the Presbyterian General Assembly at Los Angeles was the discussion in the Protestant Episcopal Church of the question as to whether or not there should be a change of the name of that church from the "Protestant Episcopal Church" to the "American Catholic Church."

The question did not come before the general convention of the church, but was debated with more or less ardor by the various diocesan conventions, when it was finally concluded by a majority of the dioceses that "any change of name of the Protestant Episcopal Church in the United States of America at this time would be inexpedient."

The year 1903 witnessed a more energetic attempt than was ever before made in the direction of church unity.

It was in the Presbyterian Church that the attempt at church-merging was the most pronouncedly active.

The various bodies into which the Presbyterian Church is divided made earnest overtures to each other and to the mother body for reconciliation and organic union, and, while nothing definite came of the attempt, it was confidently felt that substantial results would follow in the near future.

A somewhat startling feature of the religious situation of the year just closed was the rather heated controversy concerning the Mormons.

The "Mormon question" was undoubtedly largely revived by the election of one of their prominent members—Reed Smoot—to the upper branch of the national legislature.

When the Statehood bill was taken up a heated discussion arose regarding polygamy and the relation of the Mormon Church to politics in the West, in which, according to the opinion of some Senators, it was "disclosed that in certain States and Territories of the Union there was a powerful religious organization, a church not only asserting a practice that is believed by the American people to be wicked in its results—the practice of polygamy—but also asserting itself as a dominating political influence over the minds and actions of its followers. This was against the spirit of American institutions and was one of the things that the American people strongly objected to—the interference or domination of the church in temporal matters."

It may be said, in passing, that the agitation in this country over Mormonism reached across the waters, and in June Hugh J. Cannon, superintendent of the Mormon mission in Germany, was ordered by the police to leave that country. Soon afterward similar orders were served on eighty-six other Mormon missionaries in Germany.

The year 1903 witnessed the advent in America of the strange Oriental faith known as Buddhism. After two or three ineffectual attempts at planting that religion in this country the zeal of its devotees was crowned with success. In March the Rev. K. Hori, with the title of "Superintendent of the Japanese Buddhist Mission in America," came over to look after the various local missions, of which it is claimed there are about a dozen, mostly on the Pacific Coast, from Los Angeles to Seattle.

As the American discussion of the Mormon question crossed the seas and found its echo in Germany, so the religious disturbance in France was not without its effect upon this country.

Many of the religious orders expelled from France sought refuge in this country, where they looked for the hospitality that was denied them in their own land.

Religious circles in America and throughout the world were deeply stirred the past year by the Turkish atrocities in Macedonia and in other sections of southeastern Europe.

The Bulgarian Government early in the year called the attention of the European powers to a list of atrocities of which the following is the summary:

"One hundred and thirty-one cases of massacre, rapine, pillage and incendiarism.

"Three thousand women and children driven from Deres.

"Two thousand eight hundred cast into prison.

"Two hundred Bulgarians shot and burned to death in Smerdesch and 250 houses burned.

"Five men and two women tortured to death in Gorna.

"Every Bulgarian in Salonica cast into prison.

"Inhabitants of Schtif tortured with hot irons."

Later on the Turks invaded Macedonia with a large army and, setting all the recognized usages of civilized warfare aside, gave the world such a spectacle of blood as it had not seen for a long time.

The indignation aroused in America by these barbarisms no doubt had no little to do with the bringing of the Turk to terms and the cessation of the unspeakable cruelties which had stretched through many months.

During the past year the religious world lost many of its most distinguished men.

On September 7 passed away the venerable Rt. Rev. Thomas Marde Clark, Episcopal Bishop of Rhode Island and senior bishop of that church in America.

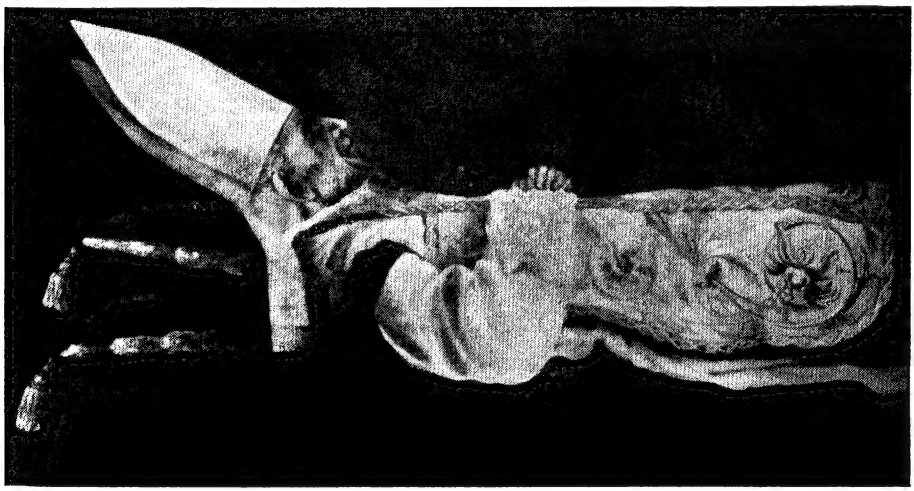
Bishop Clark was born in 1812 and was, therefore, at the time of his death, ninety-one years old, having been bishop since 1854 and presiding bishop since 1899.

Bishop Clark's influence in this country was wide and pre-eminently wholesome, and it will be many a day before his beautiful spirit ceases to tell upon the church in which he so zealously and unselfishly labored.

The Episcopal Church of America lost, on May 17, another great worker in Bishop Thomas A. Starkey, of the Newark diocese.

Following are the names of other prominent men who were taken away from the church by death during the year 1903: Bishop John F. Hurst, Methodist Episcopal Church, at Washington, May 3; the Rev. James Hale Mason Knox, president of Lafayette College, Presbyterian, at Baltimore; Very Rev. F. W. Farrar, dean of Westminster, at London, March 22; Rt. Rev. Arthur Temple Lyttleton, Bishop of Southampton, England, Feb. 20; the Very Rev. Geo. Granville Bradley, dean of Westminster, March 2.

LEO XIII.



PIUS X.

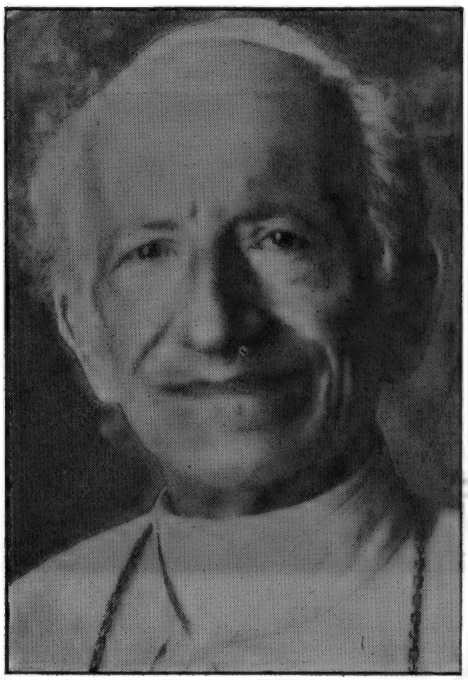
America, for the first time in the history of the Roman Catholic Church, extending over a period of nearly 2,000 years, was called upon to play an active role in the election held last August at Rome of a successor to Leo XIII. in the chair of St. Peter. It was the first occasion on which the New World was represented in a conclave, and it is understood that the United States, in the person of Cardinal Gibbons, Archbishop of Baltimore, had no small share in directing the suffrages of his fellow-members of the Sacred College toward the choice of the Patriarch of Venice as Bishop of Rome and supreme head of the Catholic Church under the name and style of Pius X. Had the European powers had their way at the conclave it is probable that some prelate would have been chosen who had achieved more renown in statecraft and in diplomacy than as a churchman, and who possessed that noble birth and patrician line-

F. CUNLIFFE-OWEN.

age that had come to be regarded by the public as an indispensable qualification for the occupancy of the Holy See. But while it is impossible to speak with any degree of certitude about the proceedings of the conclave, which are more or less preserved as state secrets, yet it is generally understood that if the tiara was, for the first time in hundreds of years, awarded to a prelate of humble origin, who had risen to the highest dignity of the church from the rank of village priest, who had held aloof from statecraft and diplomacy to such an extent that his political opinions were virtually unknown, and who had concentrated his whole attention, first upon the administration of his parish, then on his diocese and lastly on his archiepiscopal province, it was in no small measure due to the representative of the United States in the conclave. In fact it is no exaggeration to assert that the Cardinal Archbishop of Baltimore is largely responsible for the selection of a churchman rather than a diplomatist or statesman, and of a son of the people rather than an aristocrat, as Bishop of Rome.

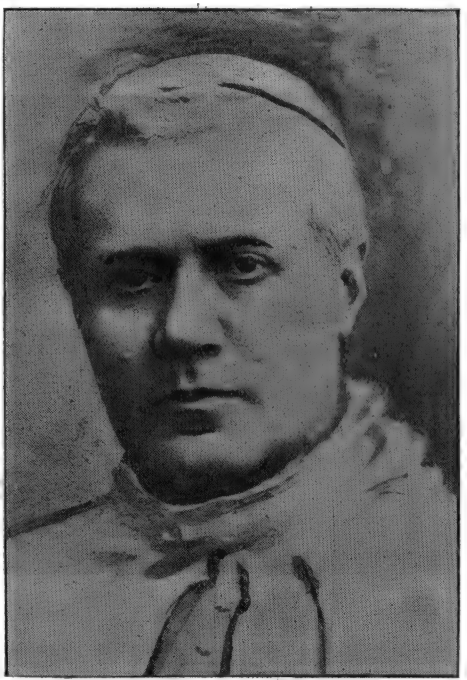
It is timely to call attention to the influence now exercised by the United States in the control of a church that numbers among its adherents some 250,000,000 of Christians in every portion of the known world, in view of the circumstance that this influence is of as recent growth and of as modern origin as the development of this country into one of the half dozen great powers that are in a position collectively to enforce their will upon the remainder

Pope Leo Lying in State.



of the world. Leo XIII. was a child of four when the English captured the national capital and destroyed the White House, while the Roman Catholic population of this republic was then so small that it numbered but a few thousands, subject to John Carroll, a Jesuit priest, who, at the personal request of George Washington, had been appointed by Pius VIII. first Bishop of Baltimore. To-day the Roman Catholic population of the United States exceeds 11,000,000, constituting in point of numbers, wealth and influence far and away the most powerful and important of all the religious denominations in this country and governed no longer by one diocesan, but by more than one hundred bishops and archbishops, one of the latter, indeed, occupying a seat in that Sacred College which is the Senate of the church. It is universally admitted by students and statesmen in all parts of the world that the growth of the prosperity and of the grandeur of the United States are very far from having attained their maturity, but are, in the natural order of things, bound to go on increasing with the same phenomenal rapidity that has characterized their progress during the last quarter of a century. And just in the same way that the Catholic Church here has kept pace with this progress until now, so it may be expected to remain abreast thereof in the future, destined assuredly to become a still more powerful factor than at present in the direction and control of the Roman Catholic universe from Rome.

To Leo XIII. Roman Catholics in America owe a deep debt of gratitude, for, imbued with modern ideas and liberal doctrines, he may be said to have contributed more than any of his predecessors to democratize the church and to divest it of everything that savored of a monarchical institution. In former times a notion prevailed that obedience to the Catholic Church involved allegiance to some monarch reigning, not by the will of the people, but by right of inheritance, which used to be known as "right divine." This impression was naturally fostered by the crowned heads, who love to describe themselves as "the anointed of the Lord" and who sought in this way to use the church as a means for retaining their hold upon the loyalty and submission of their people. To such an extent was this carried that in certain parts of Europe the profession of republican sentiments was regarded in the light of religious infidelity, and a man who was opposed to the monarch as necessarily being at variance with the church. Leo XIII. put an end to this, and lost no occasion to point out that Catholicism was not inseparable from monarchical institutions and that an ardent republican could be quite as devoted and obedient a son of the church as a subject of any king or emperor. Indeed, he actually went to the length of urging the Catholic population of France to give their allegiance to the democratic institutions which exist by the will of the people and forbade the bishops and clergy from giving any countenance whatsoever to the monarchical propoganda against the duly constituted government of the republic. Throughout his reign Leo XIII. resolutely declined to receive any of the French monarchical pretenders at the Vatican, and was never tired of explaining that when the Saviour exclaimed: "Give unto Caesar the things that are Caesar's and unto God the things that are God's," he meant by Caesar not any king or emperor, but the lawfully established government of a country, no matter whether monarchical or republican. More than this, in certain of the liturgical prayers used by himself and by the prelates of his entourage at the Vatican he substituted the name of "the people" for that of "the princes" as an object of special commendation to Divine Providence, and always referred to the United States with special affection and regard as the most promising offspring of the Roman Catholic Church and as destined to become in the future the latter's principal source of power, prosperity and grandeur.



There is every reason to believe that Pius X. will continue the policy of his enlightened and progressive predecessor, at any rate in so far as the attitude of the church toward republican institutions and the marked favor of the Papacy toward this country are concerned, for he is even more democratically inclined than his illustrious predecessor, and, being a churchman pure and simple, with no taste for statecraft, will be much less subject than Leo XIII. to the insinuations expressed by foes of the church that Popes sometimes use their spiritual influence for purely political purposes. Leo XIII., it is true, was, as a statesman, particularly anxious to establish regular diplomatic relations with the United States and Great Britain, and might possibly have been disposed

to make certain concessions of an ecclesiastical character in order to win this victory, which he considered so important to the church. Pius X. is credited with no such ambitions, and, while quite as liberal and progressive as Leo XIII., will assuredly never surrender one iota in matters ecclesiastical in order to win a diplomatic success for the Papacy. And whereas the late Pontiff was disposed to be lenient in certain matters of church discipline from motives of church policy, Pius X., uninfluenced by any such considerations, is likely to prove infinitely more strict in his spiritual government of the clergy.

It is precisely this attitude of Pius X. with regard to statecraft, diplomacy and the discipline of the church that renders improbable any change during his reign of the present missionary status of the Roman Catholic Church in this country. It is perfectly true that the Roman Catholic Church in the United States has outgrown the missionary status, which in certain respects places it on the same ecclesiastical level as China and other countries so graphically described as being "in partibus infidellum," and puts it in some particulars on an inferior plane to Bavaria, Portugal and Belgium, in each of which kingdoms the Roman Catholic population is smaller

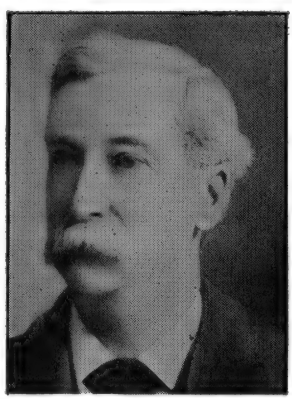
Pope Leo XIII.

Pope Pius X.

than that of the United States. These countries, however, recognize Roman Catholicism as their State religion and as their established church, and their governments, moreover, are in direct diplomatic relations with the Holy See. This necessarily brings the elements of politics and of diplomacy into their intercourse with the Papacy, which are carried on through the Papal Secretary of State, who may be described as the one political advisor and minister, in a temporal sense, of the Pontiff. The business of the Roman Catholic Church in the United States with the Holy Father is, by reason of the missionary status of this country, carried on through the Prefect of the Propaganda, who does not concern himself with questions of statecraft or politics, but devotes his attention to the ecclesiastical affairs of the church in those countries that are, in a spiritual sense, subject to his department. The very fact that the church here should deal with the Pope through the Prefect of the Propaganda, who is an ecclesiastical administrator, rather than through the Papal Secretary of State, who is a statesman and a diplomat, frees Catholicism in this country from any suspicion of activity in international politics—a suspicion which would tend to impair its growth and its influence. Indeed, so indispensable is this complete absence of all connection between the State and the Church to the welfare of the latter that it is doubtful whether those of the American hierarchy who are acquainted with the condition of affairs abroad, where the state church is sometimes used as a political instrument, would wish any change in the present missionary status of Catholicism in the United States. As at present constituted the Catholic Church in America is much more independent than it would be if compelled at every point to take into consideration the exigencies of the political relations between the Administration at Washington and the Papal Secretary of State, and, since Pius X. is free from the ambition of his predecessor to establish permanent diplomatic intercourse with the United States Government, and the American archbishops and bishops find it preferable to maintain the present condition of affairs and to remain subject to the Propaganda rather than to the Department of State at the Vatican, it may be assumed that America will continue a missionary country as long as Pius X. remains on the throne, and that nothing will thus be allowed to interfere with the development and growth of the church in this country.

Pius X., like the President of the French Republic, has a peasant mother to whom he remains devoted, and, like M. Loubet, also, has a number of near relatives in the humblest callings of life, a brother being a village postman and a sister a village dressmaker. Born at Riese, in the diocese of Treviso, on June 2, 1835, Joseph Sarto, who now reigns as Pius X., is sixty-eight years of age, but, save for his white hair, does not look his age. Ordained priest in 1858 at the age of twenty-three, he spent a couple of years in hard work as assistant priest of the parish of Salyano, and so thoroughly did he discharge the duties imposed upon him that his bishop rewarded his zeal with a canonry of the cathedral. In 1884 he was raised to the rank of Bishop of Mantua, where he dealt with the delicate problems confronting him with such excellent judgment, decision and breadth of view that in June, 1893, he was created a cardinal priest and Patriarch of Venice. Ten years later witnessed his elevation to the chair of St. Peter as Pius X.

In referring to the election of Pius X. it is impossible to avoid mention of the steps taken in the conclave by the Austro-Hungarian Government to prevent the election of Cardinal Rampolla. The



latter, while Secretary of State to Leo XIII., had rendered himself so obnoxious to the imperial government by the attitude of hostility which he adopted toward the Triple Alliance, and by his conduct in making use of the Papal Legation at Vienna to obstruct measures of an educational and administrative character inaugurated by the governments both of Austria and of Hungary, that Emperor Francis Joseph, who is a most devout Catholic, directed the Cardinal Archbishop of Cracow to announce in the conclave that he would make use of his right of veto to bar the election of Cardinal Rampolla if there appeared to be any likelihood of his being raised to the chair of St. Peter by his fellow members of the Sacred College. Cardinal Rampolla received a larger number of votes than any other candidate, and his prospects appeared most favorable, when the Cardinal Archbishop of Cracow suddenly arose and delivered the message of his sovereign. Cardinal Rampolla at once announced that he withdrew his candidature, while protesting against this infraction of the independence of the conclave, and it was in consequence of his declining to permit his name to be put forward again that Cardinal Sarto was elected, most of those who had been the partisans of Cardinal Rampolla casting their votes in favor of the Patriarch of Venice, thus assuring him an almost unanimous election. There has been much controversy as to this prerogative of veto. It is claimed by the governments of Austria, France, Spain and Italy, the latter as invested with the rights formerly enjoyed by the Kingdom of Naples. It is based merely on usage and tradition, and, though sanctioned by no Papal bull, by no treaty, concordat or written agreement on the part of the church, has nevertheless been tolerated by the latter on numerous occasions—twice, in fact, during the nineteenth century. Indeed, it would have been employed by Austria to prevent the election of Pius IX. had not her emissary reached Rome too late. During the reign of Leo XIII. it was repeatedly announced that the church would under no circumstances allow any veto to be exercised at a conclave in view of the fact that none of the four powers who had been allowed to make use thereof in the past had responded to the appeal of the Papacy to protect its temporal possessions from spoliation; but in spite of this Austria successfully invoked last August what she declared to be her ancient right, and used it to prevent the election of a statesman and diplomat to the chair of St. Peter and to secure the elevation to supreme power of a mere churchman in the person of Pius X.

Rhode Island.

—

Capital:
PROVIDENCE.

Rhode Island has an area of 1,247 square miles, and by the census of 1900 had a population of 428,556. The first European to land on the soil of Rhode Island was Verrazzani, who, in 1524, coasted eastward from New York Harbor to Narragansett Bay and landed near the present site of Newport. It is also claimed that this region was the Vineland of the Norse explorers who may have landed on the continent four centuries before Columbus. The first settlement in Rhode Island was made at Providence by Roger Williams, who was banished from Massachusetts for holding religious and political views at variance with those of the rulers of the colony. In 1638 William Coddington and others, also banished from Massachusetts, purchased from the Indians the island of Aquiday, afterward called Rhode Island, and established settlements at Newport and Portsmouth. In 1648 a third settlement was established at Warwick by John Greene, Samuel Gorton and others. In the same year Roger Williams obtained a patent from the English Government for these settlements, and in 1647 Charles II. issued a charter for Rhode Island and Providence Plantations. Rhode Island suffered much from the Indian wars of 1675 and the following years, and was relieved only at the death of King Philip. During the Revolutionary War Rhode Island took a prominent part and furnished several well-known officers to the Continental army. This State was the last of the original thirteen to ratify the Federal Constitution. In 1901 Massachusetts revoked the edict of banishment against Roger Williams, which had stood for nearly three centuries The latest statistics on manufacture in Rhode Island show 186 textile manufacturing establishments in the State. The average number of employes in these was 46,220, and the total wages paid amounted to $17,404,954. The value of the real estate owned by the textile manufacturers was $24,601,128, and the personal estate was valued at $14,055,554, making a total capital of $38,656,682 invested in textile manufacturing, upon which $480,803.11 was paid in taxes to the State.

*Gov. L. F. C. Garvin.**

Manufacturing is the leading industry in the State, Rhode Island being noted for her varied products, among which cotton and woollen goods stand first. In 1900 she ranked second in the United States in the manufacture of cotton goods and third in the manufacture of woollens, though this latter industry has decreased during the past five years. In the manufacture of worsted and knit goods, however, there has been a marked increase during the last decade. Since the invention of "filling" gold with less valuable metals, Rhode Island has stood first in the United States in the manufacture of cheap jewelry, and about one-fourth of this product in the United States comes from Providence. The manufacture of silverware is allied to this and forms an important industry.

Events in 1903.—Dr. L. F. C. Garvin, the first Democratic Governor the State has had since 1891, was inaugurated on January 6, before a large audience. In his address Dr. Garvin recommended, among other important measures, that the Legislature compel street railway companies to reduce fares on lines centring in Providence. In a special message to the Senate, in March, Governor Garvin declared that bribery was common in many towns in the State, and that many members of the Legislature occupied seats obtained by purchased votes. He recommended that a commission be appointed to employ agents to detect bribery and bring offenders to justice. Newspapers, during the year, had published many articles on the so-called "rotten borough" system of elections in Rhode Island, whereby cities have no more representation in the General Assembly than the country districts, and about alleged open buying of votes and "bossism," as practiced extensively.

A bill was passed providing for the sale of liquor on Block Island during the Summer months, in spite of the fact that Block Island had voted "no license" at the election in November, 1902. The Legislature again took up the bill in April, to act upon its repeal, the Senate Judiciary Committee having reported favorably upon such action. A deadlock on the question lasted a week, but the bill was finally repealed. Another bill, with provisions like the first, but with a referendum clause, was then prepared and presented.

The Democratic State Convention met October 1 and nominated a full ticket. The platform adopted dealt entirely with State politics.

A dense, smoky haze caused a dusk-like twilight in Newport on June 4, a result of the fires along the coast, which destroyed nearly all of the standing trees on the upper part of Long Island. Many of the stores had to use artificial light in the forenoon, and on the bay the smoke was so thick that one could not see more than an eighth of a mile. The sun appeared as a red disk. A land breeze that sprang up in the afternoon sent the smoke seaward and the city was relieved.

*Term expires January 1, 1904.

Roumania.

—

Capital:
BUCHAREST.

The first ruler of Roumania was Colonel Cuza, who had been elected Lord of Wallachia and of Moldavia in 1859. Upon the union of the two principalities, December 23, 1861, he assumed the reins of government, with the title of Prince Alexandru Joan I. In February, 1866, a revolution forced his abdication, and Prince Carol I., son of the late Prince Karl of Hohenzollern-Sigmaringen, was elected Lord of Roumania. On March 26, 1881, he was proclaimed King. King Carol was born on April 20, 1839, and, November 15, 1869, he married Princess Elizabeth von Neuwied, who was born December 29, 1843.

The Heir Apparent.—As the King is without issue, an act was passed settling the succession to the throne upon his elder brother, Prince Leopold of Hohenzollern-Sigmaringen. He, however, renounced his rights in favor of his son, Prince Wilhelm, who, in 1888, also renounced his rights. The right of succession has thus passed to Prince Ferdinand, brother of Prince Wilhelm, and he, by royal decree, was created Prince of Roumania, March 18, 1889. Prince Ferdinand was born August 24, 1865, and on January 10, 1893, he married Princess Marie, daughter of the late Duke of Saxe-Coburg-Gotha.

King of Roumania.

The Ministry.—The Ministry is composed as follows: President of the Council and Minister of War, D. A. Stourdza; Minister of Agriculture, Industry and Commerce, P. S. Aurelian; Minister of Justice, E. Statesco; Minister of the Interior, G. D. Pallade; Minister of Public Works, C. J. Stoicesco; Minister of Public Instruction and Worship, S. C. Haret; Minister of Foreign Affairs, J. J. C. Bratiano; Minister of Finance, E. Costinesco.

The Nation. — Roumania has been an independent kingdom since 1877, when the people, assembling at Bucharest, proclaimed themselves free from the rule of Turkey. Under the Constitution the executive is vested in a Council of eight members, while the Legislature consists of two chambers—the Senate, consisting of 120 members, elected for eight years, and the House of Deputies, consisting of 183 members, elected for four years. The King has a suspensive vote over the acts of the two chambers. All citizens of full age, paying taxes, have votes. The religion of Roumania is that of the Greek Orthodox Church, and its clergy are the only ones recognized and paid by the State, although other forms of worship are tolerated. Of all the countries of Europe there is none that has been more cruel and so unconsciously false to its own ideals in persecuting the Jews. It was on the plea that it was being deprived of religious liberty under Turkish rule that Roumania was permitted by the Powers to set up an independent government, and yet it is denying to a large portion of its own population this same fundamental right. It is this position and the cruelty with which it is maintained that has made Roumania, next to Russia, the foulest blot on the European international escutcheon.

Education in Roumania is supposed to be both free and compulsory, but there are few schools, and comparatively little attention is paid to public instruction. In 1899 statistics showed 88.4 per cent of illiteracy. Of the total area of Roumania about one-half is under crops, in the cultivation of which about 70 per cent of the population is employed. The principal exports are cereals, fruits, fuel, chemicals and woods. In 1901 the exports were $70,766,175, and the imports were $58,487,152.

The budget estimates for 1903-04 were: Revenue, $45,023,400; expenditure, $43,700,000. The public debt March 31, 1902, amounted to $282,667,877, of which more than half has been contracted for public works, mainly railways.

Events in 1903. — Roumanian Government officials showed their opposition to America at a meeting of the Liberals in June, when two speakers urged patriotic Roumanians to refrain from treating with American oil experts, sent out by the Standard Oil Company. The speakers said that the Americans had rendered themselves unpopular in Roumania by aggressive business methods. An exodus of Roumanian Jews to America began in June, started by utterances in Roumanian newspapers urging priests of that country to follow the example set by Russians in the Kishineff affair.

Two high officials of the Ministry of Finance were arrested in January, charged with defrauding the Government out of several thousand francs through the drawing of Government bonds. On August 7 the War Minister ordered the Government powder factory and small arms ammunition depot to prepare large quantities of ammunition at once.

Russia.

—

Capital:
ST. PETERSBURG.

The reigning family of Russia traces its descent, in the male line, from Duke Karl Friederich of Holstein-Gottorp, who, in 1700, was of a younger branch of the House of Oldenburg; and, in the female line, from Michael Romanoff, who, upon the extinction of the House of Rurik, in 1613, was elected Czar of Russia. The union of these two houses was the result of one of the cleverest projects of Peter I., who was ever scheming to bring Russia into closer contact with the rest of Europe.

Nicholas II., the present Czar, who is the eighth ruler of Russia to represent the House of Romanoff-Holstein, was born May 6 (new style, May 18), 1868, and, as the eldest son of Emperor Alexander III. and Princess Dagmar, daughter of the present King of Denmark, he ascended the throne October 20 (new style, November 1), 1894, and four weeks later was married to Princess Alexandra Alix, daughter of Grand Duke Ludwig IV. of Hesse. They have had four children, all daughters.

The Heir Presumptive.—According to the decree of Emperor Paul in 1797, the law of succession to the throne of Russia is that of regular descent, by the right of primogeniture, with preference given to male over female heirs. If the present Czar, therefore, should fail to leave a male heir, the throne would necessarily pass to his younger brother, Grand Duke Michael, who was born November 22 (new style, December 4), 1878, and who is unmarried.

The Ministry. — The Committee of Ministers is constituted as follows: President, M. Witte; Minister of the Imperial House and Imperial Domains, General W. Freedericksz; Minister of Foreign Affairs, Count Lamsdorf; Minister of War, General Kuropatkin; Minister of the Navy, Admiral Tyrtoff; Minister of the Interior, Councillor von Plehve; Minister of Public Instruction, Councillor Zoenger; Minister of Finance, M. Pleske; Minister of Justice, N. V. Muraiveff; Minister of Agriculture and the State Domains, Councillor Yermoloff; Minister of Public Works and Rail-

ways, Prince Hilkoff; Controller-General of the Department of General Control, General Lobko; Procurator-General of the Holy Synod, Councillor Pobyedonostseff; Minister and State Secretary for Finland, Councillor von Plehve.

The Nation.—Russia is an absolute hereditary monarchy. Its government is the will of the Czar, in whom vests the entire executive, legislative and judicial power. The Emperor is also the head of the church, which is the Orthodox Graeco-Russian, and to its tenets he and all the members of his family must adhere.

Previous to the passage of the Emancipation Act of 1861 all peasants were serfs of the State, of the Crown or of the nobility. In 1861, however, the State bought of the serf owners the land upon which the serfs were settled, and since that time it has not only liberated the people, but has sold the land to them on consideration of forty-nine annual payments, each of which amount to about 40,000,000 roubles for the Government.

While the majority of the people of Russia are in communion with the State Church, all other religions except that of the Jews may be freely practised. Upon the Jews, however, all kinds of oppressive restrictions are laid. Most of the schools in Russia are under the Minister of Instruction, the empire being divided into fifteen educational districts, and there are many separate schools under other ministers. There are nine State universities, and higher education, both for men and women, has been well provided for.

Czar of Russia.

Russia's enormous expanse of territory contains almost every species of industry. Its cereal products are now the most valuable of all, but the textile manufactures are fast becoming a leading factor in trade. Besides cereals and potatoes, flax, hemp, hay, grapes, tobacco, cotton, rice and silk are raised. The Government conducts sixty-eight experimental farms.

Russian forests cover a territory of more than 474,000,000 acres, the State being the largest owner of the timber lands. Concessions are now being made to cutters, but as yet little has been done in exploiting the timber forests. The soil of Russia is also rich in minerals, and the mining industry is continually increasing in importance. Gold is found chiefly in Siberia and in the Ural Mountains, while other metals which are found in paying quantities are silver, platinum, copper, manganese, iron, mercury and zinc. The salt industry flourishes chiefly in south Russia, although large quantities are also exported from the northern provinces. The petroleum industry is extending rapidly.

The Dependencies.—Finland is the one European dependency of the Russian Empire. It is in form a grand duchy, with the Emperor as the Grand Duke. Nearly the entire population are Finns and are communicants of the Lutheran Church. Russia also has some possessions in Asia, including Bokhara and Khiva, as well as the territory which has been leased from China for a term of twenty-five years and which is now known as Kwang-Tung. The best obtainable statement of the condition of these possessions is as follows:

THE RUSSIAN DEPENDENCIES.

Dependencies.	Area Sq. M.	Population	Revenue.	Expenditure.	Exports.	Imports.
Finland	144,255	2,712,562*	$17,078,613†	$20,760,000†	$37,380,000‡	$43,120,000‡
Bokhara	92,000§	1,250,000§	.....	.....	.....	.....
Khiva.....	22,320§	800,000§	.....	.....	.....	.....
Kwang-Tung	.....	50,000§	.....	.....	.....	.....

*1900. †1902 Budget. ‡1901. §Estimate..

Events in 1903.—The budget estimate for 1903 places the ordinary revenue at $948,516,339, the ordinary expenditure at $940,202,614.50, and extraordinary expenditure at $95,631,121.50, which includes $10,460,511.50 for building the Siberian Railroad. The naval programme for the year includes six battleships and three cruisers, together with a number of smaller vessels, all to be completed by 1906. Unusual activity in army circles in February, at the beginning of the Balkan trouble, and again in July, just after the Kishineff affair, brought about the appointment of many new officers and transfers of commands.

In January, in a speech delivered on the occasion of the celebration of the 100th anniversary of the establishment of the Ministry of Interior, the people of Russia were promised in the near future an arrangement whereby they should have an opportunity of taking part in local government. On March 12 the Czar issued a decree providing for freedom of religion throughout the Empire, establishing in some degree local self-government and making other concessions to the village communities. Forced labor was abolished. The reform work was started in the latter part of March by a remission of arrears of taxation, owed by the peasants to local governments. In April the peasants' joint liability of taxes was abolished.

A protest sent the Czar by four Finnish Governors against the conscription law promulgated by Russia, on the ground that it was against the Finnish constitution, resulted in the dismissal of the Governors in February. A famine in Finland brought help from America, which was followed by an order from the Czar, who decreed extensive relief works and the establishment of a bank with a capital of $2,000,000, to be used in making loans to peasant farmers. In April Finland became practically Russian, by the advancement of the Finnish Governor General to the post of Dictator. He was given absolute power in the country and was recommended to use severe measures in thoroughly Russianizing the people. A number of leading Finns were exiled on account of alleged disloyalty to Russia.

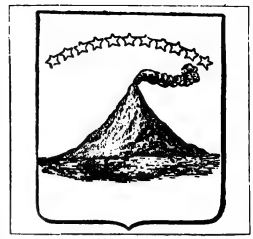
A proposal to celebrate the second centennary of the Russian press in January was summarily suppressed as a result of the circulation of resolutions intended to be passed at the banquet to be held during the celebration. Leading members of the Ministry expressed themselves as believing that the press was the cause of all disorders in Russia.

Russia had an unquiet Spring and Summer, with riots in nearly every part of the country. Workmen in the state iron mines in the Ural Mountains went on strike in March and caused much disorder; the oil region at Batoum and Baku was the scene of rioting on March 3; student disorders occurred in St. Petersburg on March 31; a mob at Niji Novgorod was suppressed by the military on April 7; a riotous gathering at Boronezh was dispersed by soldiers on May 28; serious trouble resulted from strikes at Odessa in August and a large military force was necessary; a religious war occurred in the Russian Caucasus in September, when Armenians resented the seizure of their church property. A riot, expected to be general, on the Russian Labor Day, May 14, did not occur, stringent measures for the preservation of order having been taken in advance. The anti-Semitic disturbance at Kishineff, Besarabia, in May, during which hundreds of Jews were killed, is treated fully under the head of "Jews."

The Pacific end of the Trans-Siberian Railroad was finished with the construction of the Manchurian section, which has its terminus at Dalny, the model city constructed by the Russian Government at the terminus of the road. Dalny is the product of the versatile brain of M. de Witte, who conceived the idea of building a city completely equipped with all modern conveniences, so that when the railroad was finished Russia would not have to go through the laborious stages of settling and building a city. Dalny is situated on Telienwan Bay, and is to be Russia's free port. It is a beautiful city, with well-graded and paved avenues radiating in every direction from the municipal buildings, and at the terminus of each is a national church.

A Socialist revolutionary party, more violent in its tactics than the Social Democratic party, was formed in Russia during the summer. To its teachings is laid the murder of Governor Bogdanovitch, of

Ufa, which occurred on May 19, and to the half-discovered plots against the life of the Czar and several of the Ministry, reported in June. On May 30 the second centennial of the founding of St. Petersburg by Peter the Great was celebrated by suitable ceremonies. A pan-Slav exhibition will be held at St. Petersburg in 1905, when representatives will be sent from all the Slavonic nations of eastern Europe. In February Russia paid an indemnity to the United States for the seizure of vessels and imprisonment of officers on the charge of engaging in sealing operations in waters near the Siberian coast. Rich gold deposits were discovered in eastern Siberia in March, and the government has formed plans to work them.



Russia's position in Manchuria and in the Balkan trouble is told under the heads of "China" and of "Turkey" respectively.

Salvador.

—

Capital:
SAN SALVADOR.

In the Summer of 1524 the Spanish conquerors, having subjugated Mexico and turned their attention to the countries lying to the south, passed across La Pax River and into what is now the Republic of Salvador. At first received hospitably by the natives, the Spaniards soon found their advances resisted. Alvarado received an arrow wound which rendered him lame for life; but he soon took revenge, and of all the multitude of half naked, poorly equipped warriors who opposed him not one was left alive. In 1525 Cuscatlan was captured and Salvador became a part of the vice-regal kingdom of Guatemala. In 1821 the successful termination of the struggle for liberty made by Mexico inspired the people of the southern colonies to shake off the Spanish yoke. On September 15, 1821, the province of Guatemala was declared free and independent. The province of Salvador resisted an attempt to annex it to Mexico, but finally submitted to a Mexican force and was incorporated in the empire as a part of Iturbide. In 1824 the Central American Confederation was formed—an impracticable operation, for party jealousies and personal ambitions brought turmoil and strife, and in spite of all efforts to maintain order and preserve the union the confederation was dissolved in 1839 and Salvador became one of the five independent States. Since 1842 several republics have made efforts to re-establish the Central American Confederacy, but without avail, and in 1886 the Constitution which remained in force eighteen years was promulgated. The President of the Republic is Senor P. Jose Escalon, who assumed office on March 1, 1903. The Vice-President is Senor Calixto Velado.

The Ministry. — Secretary of Government, Public Works and Public Instruction, Dr. Jose Rosa Pacas; Secretary of Foreign Affairs, Justice and Beneficence, Dr. Rafael Severo Lopez; Secretary of Finance and Public Credit, Senor Don Manuel Luna; Secretary of War and Navy, General Fernando Figueroa.

The Nation.—Salvador is a constitutional republic in which the executive power vests in a President, whose tenure of office is limited to four years, the administrative powers jointly in the President and his Cabinet of four Ministers, and the legislative power in a Congress of seventy Deputies, forty-two of whom must be landed proprietors. They are elected annually by the direct vote of the citizens. In the capital is a public library and museum, and in the republic 28 newspapers are published.

Education in Salvador is both free and compulsory, and the educational system of the country has been the subject of much attention from the Government during the past two years. Salvador has made a number of important municipal improvements, and she has shown great energy in the production and importation of articles of convenience and luxury. The telegraph and telephone service is excellent, and in 1902 Francisco Bogan, a German resident of San Salvador, made a contract with the Government for the establishment of a public automobile service.

While the country possesses considerable mineral wealth, nearly 200 mines and quarries being in operation, the majority of the population is engaged in agriculture. Coffee is the chief crop of the country, and about 90 per cent of the product is exported. The other principal products are rubber, tobacco, indigo and sugar. The conditions of the climate are such that cotton may be grown, and the Government is attempting to encourage the farmers to give their attention to this industry by offering a bounty of $1 in silver on each centner exported. The mines which are in operation contain rich deposits of gold, silver, copper, iron and mercury. The official financial statement for 1901 was: Revenue, $6,556,722; expenditure, $7,640,891; imports, $6,537,876; exports, $10,956,045.

Events in 1903.—The Presidential election, which occurred on February 19, passed off without excitement in any part of the republic. General Pedro Jose Escalon was declared elected by a good majority over Dr. Reyes, who was related to the outgoing president. On March 1 General Escalon was inaugurated without the slightest protest. This fact caused intense rejoicing all over the country, for it was the first time in fifty years that there had been a peaceful transfer of the Presidency.

President Escalon.

It was rumored in January that General Louis A. Varahona and Manuel Rivas had organized a force on the frontier of Guatemala and were about to start a revolution in Salvador. The rumor was declared false by the President, who assured the world that Salvador was in a state of perfect tranquility. The revolution in Honduras was opposed by Salvador, and support was given President Sierra. Troops of Salvador were posted on the frontier and Guatemala was jealously watched to prevent aid being given to the Honduran revolutionists.

Salvador was on the verge of a serious dispute with the United States in April, when she refused to pay the claim awarded the Salvador Commercial Company in 1902. The claim grew out of the failure in business of a firm of San Francisco capitalists, who undertook to build docks and develop the harbor of the port of El Triunfo. The Salvador Government, claiming that the Americans had not kept the conditions of their concession, confiscated their property. When the time set for the payment arrived Salvador refused to abide by the decision of the commission, and wished to reopen the case. This was refused by the United States, and for some time it appeared that coercion would be necessary. In June, however, it was reported that Salvador was negotiating directly with the company for the settlement of the claim.

A contract was approved on April 29, 1903, for the construction of a railway that will run from the port of La Libertad to Santa Tecla.

San Marino.

The small republic of San Marino, which is located in the hills near Rimini, on the Adriatic, is unquestionably one of the oldest States in Europe. It was founded in the fourth century by a pious mason of Dalmatia, and since that time has maintained its independence against many attacks, its situation, on the slope of Mt. Titan, being practically impregnable. The total area of San Marino is thirty-eight square miles, and its population, according to the census of 1899, is 11,002. It has a standing army consisting of thirty-eight officers and 950 men, no public debt, and sufficient revenue from its exports of wine, cattle and stone to meet all expenditures.

The executive power of San Marino vests in the Great Council of Sixty, composed of twenty nobles, twenty townsmen and twenty peasants, of whom two are elected to serve for six months as Regents, after which they are ineligible for office for three years.

The present Ministry is composed as follows: Secretary of Interior, G. Belluzzi; Secretary of Foreign Affairs and Finance, D. Fattori; Commissioner of Justice, J. Gianini; Commander of Militia, Frederick Gozi; Treasurer, C. Bonelli; Director of Posts, G. Bonelli; Director of Telegraphs, G. Fattori.

Italy and Great Britain are the only nations which maintain diplomatic relations with San Marino.

Servia.

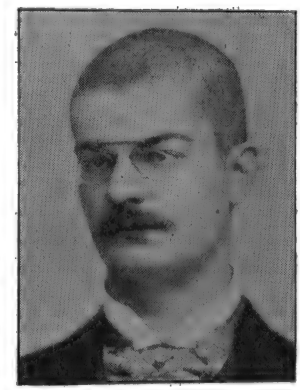
THE TRAGEDY OF 1903.

—

Capital: BELGRADE.

Although trade between Servia and the United States has been restricted to narrow limits by the instability of the Government at Belgrade, which has prevented the commercial and industrial development of the kingdom, and in spite of the fact that the latter lies out of the beaten track of the American tourist, yet the shocking tragedy which brought to a close last Summer the reign of King Alexander and the accession to the throne of Peter Karageorgevitch created a profound sensation in this country. It was a tragedy which was not merely characterized by a savagery without parallel in modern or even in mediæval times among nations with any claim to Western enlightenment and civilization, but it likewise differed from the ordinary crime of regicide by the fact that besides destroying a king it wiped out of existence an entire dynasty.

Regicide has its apologists even among men illustrious in the world of letters, and there are quite a number who hold that it is a necessary and indispensable corrective of despotism—the one means, indeed, by which monarchical tyranny is in a measure held in check. The great English poet, Swinburne, indeed, owes the loss of the ancient office of British Laureate to the profession of opinions such as these in connection with Russia. It was only to be expected, therefore, that some very specious excuses would be found for the assassination of King Alexander; but nothing can palliate the inconceivable barbarity with which the murder of the unfortunate ruler, of his consort, Queen Draga, of his two brothers-in-law and certain of his ministers and attendants was carried out.



The Late Queen—the Cause of the Tragedy.

King Peter I.

For several months preceding the tragedy of last June it was apparent that grave events were impending in Servia. The King had alienated the leading statesmen of the nation, the bulk of the people and likewise the army by his unfortunate marriage with Queen Draga. The latter will owe her place in history to the appalling nature of her death and to the part which she played in the concluding scenes of the drama that signalized the end of the Obrenovitch dynasty. And this may in a measure efface the shame of her antecedents. These were sufficiently infamous to warrant ex-King Milan in declaring to his son at the time of the latter's marriage that there was not a peasant-born sergeant or corporal in the Servian army who would dare to hold up his head in the presence of his comrades and of his inferiors if he made such a woman as Draga Maschin his wife. That Alexander should have invited a creature so notorious to share his throne can only be explained by the diseased condition of his mind, brought about by early dissipations, in which he was abetted, not only by the statesmen surrounding him, but even by his own father. His story was indeed a sad one. His mother, Natalie Kechko, daughter of a Russian army contractor, had jilted her fiance, Colonel Constantinovitch, on the very eve of the date appointed for her wedding in order to marry his cousin, who was to figure in the role of best man at the ceremony—namely, Prince Milan of Servia. The latter was attracted not so much by her undeniable beauty as by the knowledge that she was heiress to a vast fortune. When, after making her his wife, he discovered that her money was tied up in such a way that by no manner or means he could obtain control thereof, what little love he may have had for her turned to hate, and from that time forth domestic unhappiness reigned supreme at the palace at Belgrade. In fact it would be difficult to conceive of a more ill-matched couple—she closefisted, high-spirited, with a fierce temper, a jealous disposition and a passion for political intrigue in the interests of her native Russia; he profligate, extravagant, unscrupulous, a gambler and devoted to his Austrian relatives and friends. During the war with Turkey in 1876 and 1877, and again in the conflict between Servia and Bulgaria, ten years later, Milan behaved with such cowardice on the field of battle as to increase the contempt and openly manifested aversion entertained for him by his wife, and after numerous stormy scenes, resulting from his invitation of women with whom he entertained questionable relations not only to figure at his court, but actually to take up their residence in the royal palace under the same roof as his wife and child, Queen Natalie left Servia with her seven-year-old boy, vowing never to return until Milan had reformed. The King, finding that his wife had sought refuge in Germany, invoked the intervention of the Berlin Government in order to recover possession

The Last of the Obrenovitches.

of his son, and, as he had always displayed pronounced sympathies for the Triple Alliance, whereas Natalie had shown herself a champion of Russia's policy at Belgrade, the late Prince Bismarck, then Chancellor, instructed the German authorities to comply with Milan's demands, and the German police removed by force the young Servian Crown Prince from his mother's care at Wiesbaden and confided him to the emissaries of King Milan, chief among whom was an officer who was indebted for the position which he held in the Servian army and at court to the fact that his wife was one of Milan's favorites. Shortly afterward Milan compelled the Metropolitan of the Servian Church to pronounce the dissolution of his marriage with Queen Natalie, and a year later, finding that his position had become intolerable and that he was in danger of assassination, he suddenly abdicated in favor of his nine-year-old boy, leaving the country and confiding not only the regency of the kingdom, but likewise the education of his son to three dignitaries, one of whom was the very general who had assumed charge of young Alexander when torn from his mother's side at Wiesbaden.

Bent on retaining supreme power as long as possible in their own hands, the three regents fostered from the earliest age every vicious instinct which the young King had inherited from his profligate father, and before he had attained the age of sixteen body and mind had been almost entirely wrecked by drink and excesses of every kind. His father from time to time made appearances in Servia for the sake of obtaining money to squander at the card tables of fifth-rate Parisian clubs, and even went so far as to sell to the Servian Government his Servian citizenship in return for a sum cash down. And when Alexander visited Paris it was his own father, Milan, who served as his guide to the various haunts of infamy.

In course of time Alexander showed such strongly developed signs of insanity that those about him became alarmed and notified his father, who, taking advantage of the situation, returned to Servia in spite of all his solemn pledges to remain away and assumed command of the army. About the same time Alexander fell into the toils of a woman of the name of Draga Maschin, and a struggle ensued between her and Milan for the control of the King. It was Draga, in spite of her being nearly twenty years the senior of Alexander, who carried the day, and who, frustrating all Milan's projects of putting an end to her influence by mating Alexander to some German or Austrian princess, married the King herself. Milan at the same time was banished from the kingdom, and orders were given by his son to shoot him down without compunction if he attempted to cross the Servian frontier. It is a matter of vital importance to Russia to have on the throne of Servia a sovereign friendly to her policy rather than to that of the Triple Alliance. She was, therefore, at first disposed to view with favor the marriage of Alexander and Draga, since it put an end to all possibility of any German or Austrian princess becoming Queen of Servia; but when the King and Queen expressed their intention of paying a visit to the Czar and Czarina the latter, who had meanwhile been made acquainted with the Queen's history, absolutely declined to receive her. This disappointment seemed to wreck the little remaining intelligence of Alexander, who speedily developed all the traits of an imbecile with homicidal instincts. Wholesale arrests and executions were ordered in the most reckless manner by the King, while the Queen took advantage of the situation to secure from her husband a decree appointing her disreputable brother heir to the throne. It was then that Alexander's removal from the throne was determined upon as the only means of putting an end to a condition of affairs which had become wholly intolerable. The conspirators, comprising some of the principal statesmen and chief officers of the army, communicated with Prince Peter, the Karageorgevitch pretender, at Geneva, and, having satisfied themselves that he would accept the throne in the event of its becoming vacant and that he would prove a satisfactory King, they proceeded to put their plans into execution.

It is not wholly clear whether the plot as originally conceived involved assassination of Alexander, the inference being that the murderous scenes in the palace at Belgrade resulted from the resistance which the conspirators encountered on that fateful night when they set forth to obtain from Alexander his abdication and his pledge to leave Servia. Be this as it may, the plot resolved itself into a most savage onslaught upon the defenseless King and Queen by their assailants, who, after having emptied their revolvers upon the ill-fated couple, set to work to slash the body of Draga with their sabres until it had lost all human semblance, after which they pitched both corpses out of the window into the garden below. On the following morning Peter Karageorgevitch was proclaimed King of Servia in Alexander's stead, and a week later he arrived in Belgrade and took possession of the blood-stained throne, welcomed at the railroad station by the very assassins of his childless predecessor.

Peter differs from Alexander in being a soldier by training, who has done gallant service in the French army during the Franco-Prussian war. Moreover, he is a widower of mature age and experience, whose private life has been singularly free from scandal, and who, during the many years that he spent in exile at Geneva, after the death of his wife, a sister of the Queen of Italy, won by his quiet, studious and unaffected ways and mode of life the esteem and regard of all those with whom he was brought into contact. It is in this that is to be found the chief promise of happier times for Servia, although many years must elapse before the kingdom can efface from its escutcheon the stain resulting from the mode in which the reign of King Alexander was brought to a close. For the sake of Servia, however, it is perhaps just as well that the Obrenovitch dynasty has been wiped out of existence, for during the past one hundred years the Karageorgevitches and the Obrenovitches have alternated on the throne of Servia, their rivalry, their conspiracies against one another and their blood feuds—for Karageorgevitches have instigated the assassination of Obrenovitches, and the latter, in turn, are responsible for the murder of Karageorgevitches—contributing to keep the kingdom in a constant state of disturbance. Now that there are no more Obrenovitches, the Karageorgevitches will perhaps be left in undisputed and peaceful possession of the throne of Servia, even though rumors of revolt began with the accession of King Peter.

It is difficult, at the present time, to define the constitutional peculiarities of Servia, as the rise of the new dynasty means changes in all internal affairs. According to the latest reports the Ministry was constituted as follows: Premier, General Gruitch; Minister of Foreign Affairs, Andra Nikolitch; Minister of the Interior, Stojan Protitch; Minister of War, Col. Andrejevitch.

Shipping.

OCEAN TRAVEL IN 1903.

EARL MAYO.

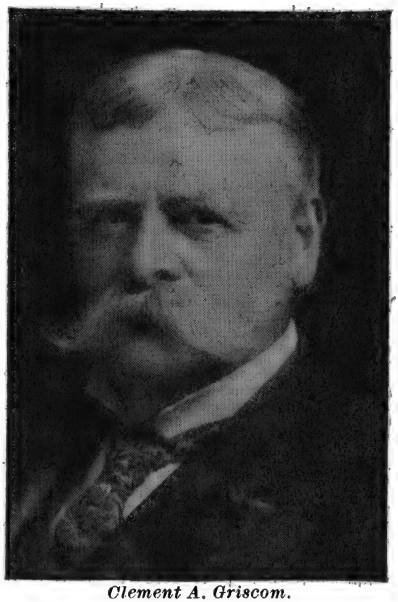
Rapid as has been the growth of population in the United States the volume of transatlantic passenger traffic has been increasing at a rate about five times as fast. This means that travel, and particularly travel to Europe, is becoming more and more the habit of Americans, a fact which any person of wide acquaintance can verify from his own observation.

During 1903 some 150,000 Americans journeyed to Europe and back, and this was an increase over any preceding season, not excepting 1900, the year of the Paris Exposition, or 1902, which was a year of very heavy ocean travel.

Americans comprise about three-fourths of the total number of Atlantic travellers in the first and second cabins. At the same time it is noteworthy that more and more Europeans are visiting the United States and Canada with each succeeding year, and that European travel to the United States bids fair to increase as rapidly in proportion as that of Americans to Europe.

More immigrants were brought to the United States during 1903 than in any preceding year in the history of the country, and the number of third-class passengers from the United States to the various European ports also showed an increase over any previous year, so that on the whole 1903 has been a banner year in all classes of ocean travel.

In 1902, according to the official statement of the Transatlantic Passenger Conference, the total number of ocean passengers carried by all lines to and from all Atlantic ports of the United States and Canada was 1,249,732. Nearly three-fourths of these



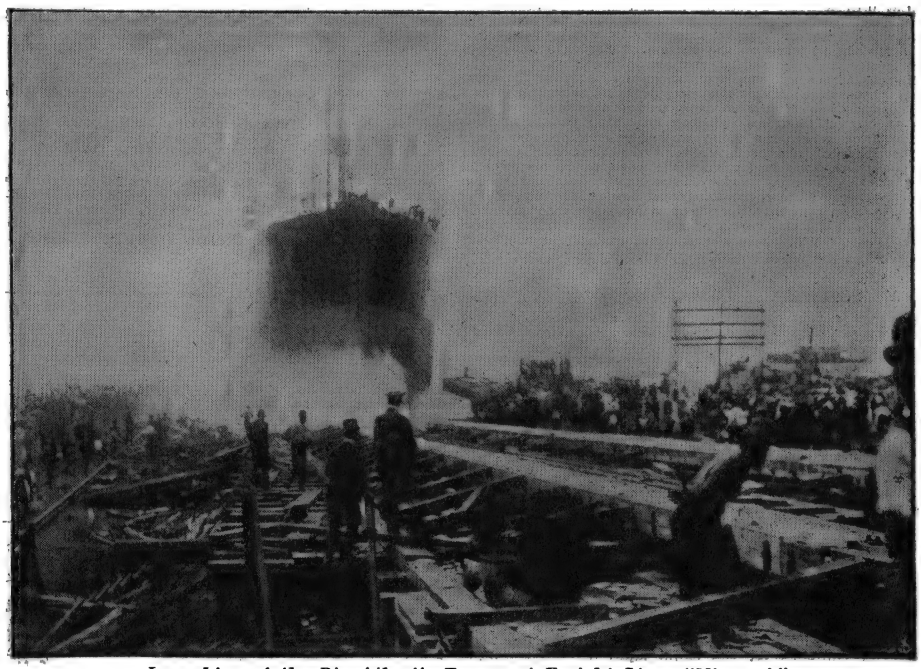
were third-class passengers, consisting chiefly of European immigrants coming to make their homes in the United States and Canada or returning to their native lands. The other one-fourth, or about 310,000, represented business and pleasure travel.

At the beginning of 1903 there were predictions that the approaching season would show a falling off in these high figures, but with the coming of the Summer the rush of holiday travellers to Europe and the incoming flood of European immigrants proved to be even greater than in the preceding year. Official figures for ten months of 1903 show a gain of more than 20 per cent over 1902 and indicate that the total volume of transatlantic travel for the year will amount in round figures to 1,500,000 passengers.

This increase is not confined to any one class of travellers, but is made up of gains in every department. The increase in the number of second cabin passengers from Europe to American ports is especially pronounced, showing that a large number of thrifty and desirable Europeans have been coming to make their homes in America.

The cause of the great volume of third-class travel, which is made up chiefly of European immigrants, is to be found in the general prosperity of the country. The influences which have led to the remarkable increase of cabin traffic, amounting to about 10 per cent for several years past, may be classified roughly as three in number:

The first of these is the growth in wealth and prosperity of the United States. To-day there are a hundred persons in any American community who are able to travel abroad for every ten that could have been found there twenty-five years ago. Aside from the direct influence which the increase in wealth has exercised has been a development in education and culture and a broadening of interests, so that those of moderate means are much more anxious than formerly to indulge in the luxury of an ocean trip.



Clement A. Griscom.
Prest. International Mercantile Marine Co.

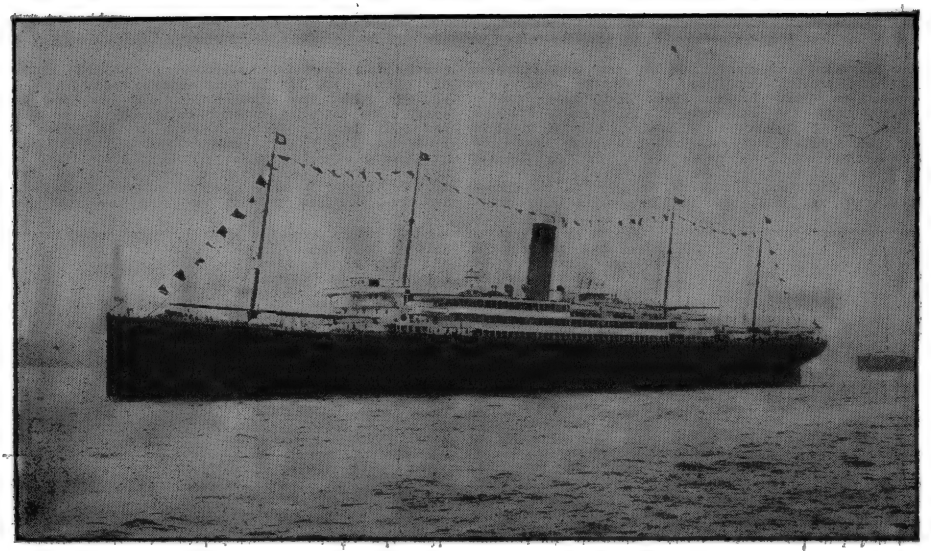
The second influence is the rapid expansion of business relations between the United States and Europe. Americans are exercising a growing influence in the commercial and industrial affairs of the Old World, and this naturally leads to a greater amount of business travel between the two continents.

Last, and perhaps most important of all, must be placed the great influence exercised by the advance in the comfort, convenience and luxury of ocean voyaging. The improvements in size, speed and steadiness of the ocean steamships have transformed the Atlantic voyage from a dreaded ordeal to a positive luxury, while the safety of sea travel has progressed to such a point that even the most timid person no longer hesitates to venture on the great ocean highways in view of the fact that statisticians tell us that a man is more safe on a modern ocean liner than on a railway, at home, in the street car or in almost any other place.

With every year swifter, larger and more luxurious vessels have been put into service, and sailings have been made more frequent. These improvements have been reflected in changes, not only in the volume, but in the character of transatlantic travel. A quarter of a century ago the resident of a small

Launching of the Big Atlantic Transport Freight Liner "Missouri."

town or incipient inland city who made a trip to Europe was a marked man henceforth. He became a sort of local oracle, was likely to figure prominently in the public affairs of the town and was pointed out to visitors as one of the sights of the place. Now there is not a village of any consequence between the Atlantic and Pacific which does not furnish each year a party of its citizens to swell the quota of European voyagers.



At the earlier date the man who went to Europe did the grand tour and occupied several months in its progress. Now short trips of from four to six months are much more generally the rule. A man will run over to Europe on some business affair in the Spring and possibly will repeat the voyage in the Fall. Instances are very frequent where men, especially public men and business men of large affairs, go across and return by the same steamer, declaring that the ocean trip is the most comfortable and restful vacation that they can find. The growth of commerce between America and Europe has contributed greatly to the sort of travel represented by these brief journeys. Another element which also encourages this tendency is made up of those socially prominent who find it convenient to bridge the gap between the close of the Winter social campaign and the beginning of the Summer season by a visit to the gay or interesting resorts of Europe. The past year has been marked by the appearance of the usual number of new ships and other improvements in Atlantic travel. Among the new vessels that have been put into commission have been the Cedric and Arabic, of the White Star line, between New York and Liverpool; the Kaiser Wilhelm II., of the North German Lloyd, between New York and Bremen, and the Columbus and Mayflower, of the Dominion line, between Boston and Liverpool. The Atlantic Transport line launched four large ships for its Baltimore-London service.

"Adjusting Compass" on the Bridge of the "Philadelphia."

All of these have been very large ships, the Arabic and Columbus being of over 15,000 tons and the Mayflower about 14,000. The Kaiser Wilhelm II. is a giant liner, with engines of 40,000 horse power, and is one of the swiftest vessels on the Atlantic. The most noteworthy of the group, however, is the 20,000-ton Cedric, which is the largest ocean liner afloat. She is characterized by the roominess of her cabin apartments and decks and by the great steadiness resulting from her immense cargo capacity. She is not a fast ship, requiring eight days for the trip from Liverpool to New York, but represents the new type of vessel of great size and steadiness which seems to be sharing the popularity of the nerve-racking record-breakers, especially with travellers who are not good sailors.

The International Mercantile Marine Company, which is the result of a combination of half a dozen of the principal lines, has continued to attract the chief attention of the shipping world and of the travelling public. Although the combination was effected in 1902, the work of centralizing its numerous branches and rearranging its sailing dates to make possible more frequent departures from the principal ports was not carried out until 1903. The company controls the largest passenger fleet in existence, including 140

The White Star Liner "Arabic," One of the New Ships of 1903.

vessels. A number of new transatlantic services have been established during the year, including the Red Star service from Boston to Antwerp, the Leyland Line service from Boston to London and the Cunard service from New York to the Mediterranean. Late in the year the White Star Line acquired a fleet of four large new Dominion Line vessels and placed them in service between Boston and Mediterranean ports to accommodate the rapidly growing Winter tourist traffic to southern European pleasure resorts. The year has been marked by the absence of serious steamship accidents and by the prevalence of excellent sailing conditions. A large number of steamships have broken their individual records, among them the Philadelphia, St. Louis, Finland, Celtic and a number of others. Early in September the Deutschland established a new record between Cherbourg and Sandy Hook, making the run in 5 days 11 hours and 54 minutes.

Much attention has been devoted to the possibility of adopting the turbine engine for ocean steamships. The success of this form of engine in the new boats put into service in the English Channel indicated that there is no fundamental reason why it could not be employed in fast ocean vessels, and in October it was announced that the Allan Line had contracted for the building of a turbine ship, while the Cunard Line has been considering the feasibility of employing the turbine in the two large ships which it is planning to build.

Of the improvements actually introduced during the year on the steamships, perhaps the most noteworthy has been the equipment of a large number of vessels with the Marconi wireless telegraph apparatus, which has enabled the ships and their passengers to keep in communication with the shore and with passing vessels during the journey. The American, Red Star, Atlantic Transport and Cunard lines have also begun the publication on their vessels of newspapers containing news dispatches transmitted by the wireless system. Personal messages are sent between vessels while on the high seas.

Waving Goodby to Departing Friends as the Steamer Leaves the Pier.

Siam.

—

Capital: BANGKOK.

The Kingdom of Siam lies between the British Indian province of Burma and the French Indo-Chinese territory. Its territories have dwindled very materially in recent years, but by the agreements made between Siam and France, in 1893, and Great Britain and France, in 1896, the main central parts of the kingdom were neutralized, the two Powers agreeing not to send troops into it or to attempt any exclusive advantage over it. The present ruler of Siam is Chulalongkorn I., who was born September 1, 1853, and who succeeded to the throne upon the death of his father, Mahah Mougkut, on October 1, 1868. The exact number of the King's children is not known, but at least five have been officially recorded. These are considered legitimate for the purpose of royal succession by official announcement. The oldest is Prince Chowfa Maha Vajiravudh, who was born in January, 1880. The second recognized son is Prince Chowfa Chakrapongse Poowanrath, born in March, 1881. The other three are: Princess Walai-Alongkorn, born in April, 1883; Princess Sirapornsophon, born in July, 1887, and Prince Chowfa Asadang Dajarvoot, born in May, 1889.

The Heir Apparent.—Although the royal dignity is nominally hereditary, it does not descend always from the father to the eldest son, each sovereign being invested with the privilege of nominating his own successor. The present Crown Prince, however,

is Chowfa Maha Vajiravudh, who was born in January, 1880, and who was proclaimed heir to the throne on January 17, 1895.

The Ministry.—The Ministry is constituted as follows: Minister of Foreign Affairs, Prince Krom Luang Devawongse; Minister of the Interior, Prince Krom Kluang Damrong; Minister of War, Prince Somdet Krom Pra Bhanurangsi; Minister of Finance, Prince Krom Mun Mahitson; Minister of Justice, Prince Rajburi; Minister of Local Administration, Prince Krom Kluang Naresr; Minister of Public Instruction and Worship, Pyra Voudhikabodi; Minister of Agriculture, Pyra Teweht; Minister of Public Works, Prince Tchao Fah Krom Khun Naritsara; Minister of the Royal House, Prince Krom Bidyalabh.

King of Siam.

The Nation.—In Siam the executive power is exercised by the King, who is advised by a Ministerial Cabinet, in which nearly all of the portfolios are held by his immediate relatives. The law of 1874, which provided for a Council of State, has now been superseded by the royal decree of 1895, by which a legislative council was created. The latter is composed of a Minister of State and others, not less than twelve in number, appointed by the Crown. The total membership is now fifty-one.

Two professors of Harvard Law School were selected in March to the posts of legal advisers to the King, a post of great influence and responsibility, as the action of Siam in international questions will depend largely upon the advice of the holders of this office.

The Siamese dominions are divided into forty-one provinces, each having a commissioner deriving his authority directly from the King, and having under him subordinate governors for the various parts of his district. The chief product of the country is rice, there being twenty-six large mills in Bangkok alone. The cutting of teak is also an important industry, while the mineral resources of the country, which are extensive and varied, include principally gold, tin, coal and iron. In some places diamonds have also been found.

The King of Siam is in many respects the most progressive of Oriental sovereigns and has expressed himself as anxious to induce investments of capital from this country and Europe for the purpose of developing the agricultural and manufacturing interests of the kingdom. There are already more than 250 miles of steam railways, with an electric road six miles in length in Baugkok. The telegraph and telephone are both in operation and there is a postal delivery in Bangkok. Great advances have also been made in the methods of government administration and justice. Several Belgian lawyers of repute have reorganized the court system, and the entire legal code is now being remodeled by lawyers from Japan. The King's confidential adviser is also an English officer, and other Europeans hold several high positions under the Government. As the result of this liberal policy the financial condition of the country is extremely favorable. There is practically no public debt and the revenues are constantly increasing. The latest financial statement—that for 1902-03—was as follows: Revenue, $11,453,000; expenditure, $11,302,670. In 1901 the exports amounted to $21,834,800, while the imports were $14,027,000.

Socialism in the United States.

H. GAYLORD WILSHIRE,
Editor
Wilshire's Magazine.

Socialism made its first appearance in the political field in the United States in 1888, when the Socialist party placed a municipal ticket in the field in New York City and polled 2,068 votes.

Since then every year the party has made a steady advance, until in the Presidential campaign of 1900 a total vote of over 100,000 was secured, while in 1902 the vote went up to over 285,000 in the State elections. The following table shows the distribution of the vote, with its percentages and total:

State.	Percentage of Total Vote.	Socialist Vote.
Massachusetts	9.9	39,065
Montana	5.7	3,131
Washington	5.6	5,573
Colorado	4.8	8,994
Wisconsin	4.6	16,761
Minnesota	4.6	12,099
Oregon	4.2	3,771
Utah	3.6	3,069
South Dakota	3.5	2,620
Illinois	3.2	28,402
California	3.2	9,799
Idaho	2.9	1,737
New York	2.8	39,286
Arizona	2.6	519
Pennsylvania	2.5	26,967
Alabama	2.5	2,812
Connecticut	2.4	3,820
North Dakota	2.3	1,139
Wyoming	2.0	552
Ohio	2.1	17,253
Oklahoma	2.1	1,903
Rhode Island	2.1	1,283
Nebraska	1.9	3,757
Maine	1.8	1,973
Indiana	1.6	9,833
Iowa	1.6	6,890
Michigan	1.4	5,535
Kansas	1.4	4,078
New Hampshire	1.2	1,057
Missouri	1.2	6,894
Porto Rico	1.2	680
Texas	1.0	3,513
Delaware	.6	229
Kentucky	....	2,498
New Jersey	....	6,623
Vote of 1900 in other States not having tickets this year	....	3,412
Total	....	285,197

Following is the list, probably not quite complete, of the public offices now filled by representatives of the Socialist party, mostly within the last year:

In Massachusetts we have three members of the Legislature—James F. Carey, of Haverhill; Frederick O. MacCartney, of Rockland, and Wallace C. Ransden, of Brockton. The third seat was first captured last Fall.

In Haverhill, Mass., we have the Mayor, two Councilmen, a School Committeeman and an Assistant Assessor.

In Brockton, Mass., we have the Mayor, three Aldermen, eight Councilmen and two School Committeemen.

In Chicopee, Mass., we have an Alderman.

In Amesbury, Stoughton and other Massachusetts towns we have some seventeen town officers, where before this year we had but one, while in New Jersey, also, we have a number of town and village officers.

In Pennsylvania we have a Councilman at New Castle and a large number of town officers, mostly in the field of last Summer's coal strike.

In Indiana we have one Councilman at Marion and one at Linton.

In Illinois we have within the last month begun what promises to be a brilliant record of victories, electing our candidate for Alderman from the Pullman ward of Chicago.

In Michigan we made our first victories in the Spring of 1902, electing two Aldermen in Battle Creek. In the Fall we elected one in Saginaw, and this Spring we have brought the number of Socialist Aldermen at Battle Creek up to four, and, according to latest reports, elected also the Mayor and some Aldermen at Escanaba.

Wisconsin also recorded one victory a year ago—the election of an Alderman at Sheboygan. At this Spring's election the Socialist party swept the city, electing Mayor, Treasurer, City Attorney and Assessor, four Aldermen and several other city officers.

In Austin, Minn., we have an Alderman, elected in March.

In Boone, Iowa, we have a Councilman, elected within the last month.

In Liberal, Mo., we have a Councilman.

Colorado shares in the progress, electing a Socialist Alderman at Telluride last month.

Montana finally has contributed to the list of victories. The Socialist party has there carried the city of Anaconda, electing the Mayor, Treasurer, Police Magistrate and three Aldermen out of the six chosen. In Butte we missed carrying the city by only 400 votes out of 9,500 and succeeded in electing one Alderman. In Red Lodge three out of the five Aldermen chosen are Socialists.

This list of something like a hundred candidates of the Socialist party elected to office within the last year, where before that time we had not more than about a dozen in all, is significant. There is no doubt but that the election of 1903 will show nearly 500,000 votes for the Socialist party.

However, it is not so much in the growth of the party vote that Socialists get their greatest encouragement in believing that the triumph of Socialism is at hand. It is in the development of industry, particularly as evidenced by the appearance of the trust. The Socialist wishes to substitute the co-operative system of production and distribution for the existing competitive system. In order to have national co-operation he says that we must have public ownership of capital—that is, of the means of production—the railways, the oil refineries, etc. Hence his cry, "Let the nation own the trusts!"

Under our present competitive system the laborer is being paid not according to what he produces, but according to what the unemployed man demands, and his wages tend to remain fixed at a point that simply suffices to sustain a mere existence. The result of this underpayment of labor conjoined with a greater and improving efficiency of labor, increasing every year through the use of improved machinery, is an enormous accumulation of wealth in the hands of the capitalists. The capitalist has hitherto been using this surplus by investing it in new machinery of production—i. e., by building new oil refineries, steel mills, etc. He has been employing the labor set free by the use of machinery by setting it to work building more and better machinery. The final result of all this building of new machinery is that we have reached a stage where we have produced more than we know what to do with. Hence came the necessity of the trust to curtail this unnecessary production, the continuance of which spelt ruin to the capitalists owing to the excessively low prices resulting from this overproduction.

However, the trust, while curing one evil, "overproduction," brings up a worse one—namely, "unemployment." That employment of men in the making of new machinery is about to come to an end is what the trust prognosticates. As this unemployment problem is caused by our system of competitive wage-paying, it can only be solved by the abolition of that system. We must find a substitute, and co-operation is the only substitute. Hence it is that the growth of the trusts is possibly a surer index of the approach of Socialism than is the growth of the Socialist vote.

Society in 1903.

—

A REVIEW.

THE CHAPERON.

The New York season has now a definite opening and closing. There is an afterpiece—one might say a curtain-raiser at the end, instead of the beginning of the performance, if such a bull can be permitted—in which the most important events are presented. The season begins with the Horse Show, in November. In former years, after this function had taken place, society retired again to the country for a short while to indulge in a little more following the hounds, to eat Thanksgiving turkey and to enjoy the glories of the American Autumn. This past year the schedule was changed; and the programme for the year to come being much the same, it would seem as if this new arrangement is to be the fixture. It has been claimed that the adoption of the motor has had much to do with this change. The fashionable world now thinks nothing of keeping two or three establishments going at the same time, and it is a puzzle often to know exactly where people are located. It takes a short time, and one quite independent of time tables, to be transported from town to country or from country to town.

Immediately after the Horse Show last year, without the usual intermission, the season at the Metropolitan Opera House was inaugurated. From the very first performance until the last, which took place late in Lent, the parterre boxes, where the leaders of society sit, were filled with a splendidly jewelled and gowned audience, and an empty box was an exception. It was the most successful season the Metropolitan has ever enjoyed. And yet, as in other years, there was much complaint as to the general dullness of the season. There were few large gatherings and only a limited number of private balls. But those who undertake to criticise New York society from that standpoint or from the lack of general gayeties do not understand the situation. Society is in a state of transition. New York is now the Mecca of the wealthy from all parts of the United States. It is hopelessly divided into sets, and some of these represent neighborhoods. It has outgrown its village or small city limits, and it has become a great metropolis, as is London. There during the season there will be as many as fifteen or

Mrs. Ogden Mills.

FOUR LEADERS OF NEW YORK SOCIETY.

twenty or more private entertainments on a large scale in one evening, and although the entire force of "Burke's Peerage" may be in town, including the Court, three-quarters of these functions will possess the same degree of smartness. One duchess goes in one set and another duchess has other friends. It is the same with royalty, and while the King is dining at one place the Queen, the Prince and Princess of Wales and the minor fry of the reigning

Duchess of Marlborough.

Lady Michael Henry Herbert.

Lady Carnarvon.

Countess Castellane.

TITLED LADIES WHO HAVE BEEN ENTERTAINED.

house will be entertained by other hosts and hostesses.

It is true that the number of large entertainments of the season of 1903 scarcely reached the number of one dozen. The plunging into mourning of several of the most prominent hostesses in New York by family affliction was accountable for this in a large measure, and there was besides a lack of notable debutantes. The tragic death of Charles Fair and his wife threw Mrs. William K. Vanderbilt, Jr., and Mrs. Hermann Oelrichs into mourning. The death of John Mackay, followed later in the year by that of Mrs. William E. Duer, the mother of Mrs. Clarence Mackay, prevented that charming hostess from appearing in society. Mrs. Clarence Mackay had the year before given so many magnificent entertainments that her retirement was a distinct loss. Nicholas Fish met with his death in a mysterious way, and Mrs. Stuyvesant Fish did not go out until January. Heber R. Bishop, one of the most hospitable of hosts, died in the beginning of the season, and his death threw the entire D. O. Mills connection into mourning. Mr. Bishop's daughters had married into the Lanier, Taylor and other well-known New York families. He and Miss Bishop always gave a large ball each Winter. Miss Jean Reid, the debutante daughter of Mr. and Mrs. Whitelaw Reid and the granddaughter of D. O. Mills, was obliged on this account to postpone her coming out until late in February, when her father and mother gave a ball for her.

Mr. and Mrs. Cornelius Vanderbilt, Jr., had also arranged to entertain on a large scale. The presence of the late Sir Michael and Lady Herbert—the British Ambassador and his wife, who is Mrs. Vanderbilt's sister—was one of the many reasons for this. They took a handsome house, but hardly had moved into it before Mr. Vanderbilt was taken with typhoid fever and hovered between life and death for nearly two months. Happily, he has fully recovered.

There were a few debutante teas and dinners in the beginning of the season following the Horse Show. The first large ball was the Assembly. This took place at the Waldorf-Astoria in December. It was a very crowded function, and the floral decorations were more elaborate than they had been in years. But there was absolute lack of entente cordiale among the guests. Many were strangers to one another and the hostesses of the evening were extremely bored. In fact, many of the very fashionable women did not put in an appearance. Shortly after this ball it was announced that the Assemblies would in future be abandoned. This gathering was the last of a class of entertainments which were representative of the most fashionable and exclusive society in New York. With the death of Ward McAllister the Patriarchs came to an end, and the Assemblies—their rivals—lasted but a few years longer. The ladies who tried to keep them alive were forced to admit that New York was too large for such affairs, society was divided into too many cliques, and that the days of a mere "Four Hundred" were over forever.

Mrs. Astor gave the great ball of the season, and this was followed a week later by Mrs. John Jacob Astor's entertainment, on a smaller scale.

Ex-Commodore and Mrs. Elbridge T. Gerry gave a large musicale in January for their married friends in the older set, and had for their daughters, the Misses Gerry, a reception and cotillon in February. Mr. and Mrs. Ogden Mills had a cotillon in February also, and Mrs. Stuyvesant Fish was the hostess at a series of dinners of all nationalities. The Astor ball, the Gerry cotillon and Mrs. Ogden Mills's dance are events which take place every year. In addition to these was the ball already mentioned given in February by Mr. and Mrs. Whitelaw Reid for Miss Reid, that of Mr. and Mrs. Charles T. Barney to inaugurate their beautiful new ballroom at their house in Park avenue, and an impromptu dance arranged by Mrs. William D. Sloane, who was Miss Vanderbilt, in honor of her daughter, Mrs. William Osgood Field, who had just returned from Europe. Mrs. Dallas Bache Pratt gave a dance at Sherry's for a debutante daughter, Mrs. Frederick

Mrs. William K. Vanderbilt, Sr.

Mrs. Robert Hunter.

Mrs. Eugene V. R. Thayer, Jr.

Mrs. Reginald Vanderbilt.

THE BRIDES OF 1903.

Schuchardt had an entertainment of the same character for her daughter. Mr. and Mrs. Seth Barton French had a dinner-dance for the Misses Atterbury, nieces of Mr. French, and Mrs. Parks a small dance for her daughters, who came out during the year.

The dancing classes were not well patronized. There were several of them given up. Among these were the Cinderellas, which have been the first "small and earlies" for many years, the Friday Evening Dancing Class and the Wednesday Cotillon. The latter has been perpetuated by a smaller class.

Dinners and informal dances and parties to the play were the amusements of the Winter. The telephone played a very important part in the arranging of social functions. Very few of the smaller dances or dinners were seemingly planned until a few hours before, and guests were asked in a studied informal way by telephone. Many were bound by previous engagements, but when hostesses in the Vanderbilt, Astor or Mills families gave the bidding a way was found to get over the difficulty.

There were many distinguished foreign visitors in town, including the Duke of Newcastle, Lord and Lady Carnarvon, Lord and Lady Kintore, the Duke and Duchess of Manchester and many others. The Countess de Castellane arrived in January, and her sister-in-law, Mrs. George Gould, entertained in her honor at a superb musicale, at which golden favors were bestowed upon the guests. The musicale was preceded by a dinner, which is now the almost individed from the effects of a fall at a steeplechase. The second was Lewis Rutherfurd, a brother of Mrs. Henry White, the wife of the first secretary of the American Embassy in London. The first wife of William K. Vanderbilt, who obtained a divorce from him in 1895, is now Mrs. Oliver H. P. Belmont.

Another notable match was that of Honore Palmer, the eldest son of the late Potter Palmer, of Chicago, and Miss Grace Brown, of Baltimore. The engagement was announced in the early Spring and was the result of an automobile trip. Miss Brown was a sister of Carroll Brown, who married one of the daughters of the late Marcus Daly.

International marriages were also a feature of the year. Miss Harriet Taylor, the daughter of Henry A. C. Taylor and a granddaughter of the late Moses Taylor, the millionaire banker, married the Count Giuseppe della Gherardescha, of the Italian Embassy at Washington, and Mrs. Lawrence Turnure, Jr., the daughter of General Roy Stone, became Lady Monson, the wife of Lord Monson, a nephew of Sir Edward Monson, the British Ambassador at Paris.

In New York society there was scarcely a halt to the season. After Easter came the coaching and the outing days, which were made delightful by very cool —almost cold—weather. In Paris the great automobile race, which ended so disastrously before the contestants had crossed the frontier into Spain, where they were to have reached Madrid as their goal, was

Mrs. Philip Lydig.

Mrs. Charles Hall.

Mrs. Robert Collier.

Mrs. R. Livingston Beeckman.

THE NEW LEADERS OF THE NEWPORT SET.

variable custom. Mrs. George Crocker, who was Mrs. Rutherford, of San Francisco, also had a musicale, at which Nordica sang to an audience of over five hundred people.

The Countess Fabbricotti was another visitor who was entertained by William C. Whitney, August Belmont, the Vanderbilts and other well-known people. Lady Herbert came occasionally to New York and was seen often with her sister, Mrs. Ogden Goelet, and her mother, Mrs. R. T. Wilson.

William C. Whitney contented himself with giving musicales on a grand scale. William K. Vanderbilt arrived in the Winter and opened his splendid country seat, Idle Hour, on Long Island, for a week, to a house party of over one hundred people. Mr. Whitney entertained "en prince" at Aiken, and special trains brought many guests to Southern estates early in the Winter on house parties. The Palm Beach season opened in February and was brilliant. There the Chicago and Pittsburg wealthy elements met New York and combined to give a series of gorgeous entertainments. Henry Flagler was one of the most hospitable of hosts.

In matrimonial affairs it was a Vanderbilt year. The wedding of Reginald Vanderbilt to Miss Cathleen Neilson at Newport in Easter week was an event which seemed to interest the entire world. The prominence of the parties, the beauty of the bride, the many rather disagreeable contretemps which kept young Vanderbilt from New York and the magnificence of the gifts showered on the young couple kept the interest alive for weeks. Hardly had the wedding taken place when the engagement of William K. Vanderbilt to Mrs. Lewis Rutherfurd was announced, and was followed by a quiet wedding in London and a tirade from churchmen of a certain class because Mr. Vanderbilt was a divorced man.

Mrs. William K. Vanderbilt was a Miss Harriman, a cousin of E. H. Harriman, who had a thrilling experience on his fast train through the West, reaching New York just in time to be operated on for appendicitis. Her first husband was Sammie Sands, who participated in and witnessed by several prominent Americans, among whom were William K. Vanderbilt, Jr., and Foxhall Keene. Mr. Keene subsequently came to America and brought with him the famous Hurlingham polo team, who played match games with the best of the American talent and who were feted everywhere and delightfully entertained at Saratoga and Newport. Hardly had the coaching and racing season been well under way when it was succeeded by the trial spins and tests of the Reliance with the Constitution and Columbia preparatory to the great Cup race, sailed in the early Autumn. Interest in yachting during June and, in fact, throughout the Summer was very general. The New York Yacht Club had its annual cruise and visited New London, Newport and Marblehead.

The Newport season began in July. There was a movement among quite a number of the cottagers to go there earlier than usual and many of the cottages were occupied in June. The first wedding of the Newport season was that of Miss Josephine Johnson, the daughter of Mrs. Herron Johnson and Henry A. C. Taylor, the father of the Countess Gherardescha. This was only a small affair. There were a number of new cottagers at Newport, principally in the younger married set. Among these were Mr. and Mrs. Livingston Beeckman, Captain and Mrs. Philip Lydig, Mr. and Mrs. Robert Collier, Major and Mrs. Charles Hall, of London. Mrs. Hall had been Mrs. Albert Stevens, the daughter of the late Judge Brady and a belle in New York society. Mrs. Ogden Goelet opened her splendid residence early in the season and entertained a train of European notables. Mrs. George Crocker, who had been absent from Newport a year, returned and was one of the most active of hostesses.

The Vanderbilts were represented at Newport by Mrs. Vanderbilt, Sr., Mr. and Mrs. Alfred Vanderbilt, Mr. and Mrs. Reginald Vanderbilt and Mr. and Mrs. H. McK. Twombly. Mr. and Mrs. Frederick Vanderbilt paid a short visit to Newport, but entertained little. Mr. and Mrs. William K. Vanderbilt,

Jr., were in Newport in August. Mrs. Vanderbilt, Sr., and her daughter Gladys were at "The Breakers," and Mr. and Mrs. Alfred Vanderbilt divided their Summer between Newport and the Adirondacks. Mr. and Mrs. Reginald Vanderbilt did not return until very late, when they were made the recipients of much hospitality. Mr. and Mrs. Cornelius Vanderbilt arrived in the beginning of July and lived most of the time on their yacht, North Star, in which they had cruised in the Mediterranean.

It was a Summer of yachting. This took precedence over all other sports. Catboat racing and the contests between the small, almost toylike yachts were everyday features of Newport life. It was the middle of July before Mrs. Astor arrived, and she gave a series of state dinners at her beautiful Newport home. J. J. Van Alen, who had been absent a year and had gone in that time around the world, returned and was at Wakehurst, where he entertained on a very lavish scale. Mr. and Mrs. Edward J. Berwind gave some splendid receptions and large dinners at their palace on Bellevue avenue. Miss Leary had a housewarming in her new home, and her friend, Mrs. Henry Plant, entertained at the old Mills street house.

Newport was not without its gossip and its thrilling and dramatic episodes, but they were not of such a tragic nature as those which had taken place the Summer previous. One of the most notable divorces was that of Mrs. Arthur Kemp, who obtained her first decree in May. She is an elder sister of Mrs. Reginald Vanderbilt.

The famous Newport tennis week was held at the Casino during the last days of August and was followed in quick succession by the Horse Show, which virtually brought the season to an end. A few meets were held with the hounds during late September, but there was a general early rush to town for the Cup races. The arrival of Sir Thomas Lipton with a number of distinguished guests gave Newport and the suburban resorts near the water many opportunities to show true and munificent American hospitality. With the last of the Cup races the Autumn suburban season was at hand. The Fall meetings of the Meadowbrook Hunt began very early and the residents of that delightful region of Long Island were at their country seats almost before the first frost.

Bar Harbor and New London, Southampton and the smaller places had all excellent seasons. Saratoga enjoyed one month of fashionable patronage. The personnel of the visitors there constantly changed, and many who had camps in the Adirondacks stopped for a few days coming and going, while Mr. and Mrs. Alexandre, William C. Whitney and Miss Randolph, August Belmont, Mr. and Mrs. Edward R. Clark, Mr. and Mrs. Foxhall Keene, Mr. and Mrs. William Rhinelander, Mr. and Mrs. Thomas Hastings and Mr. and Mrs. Harry Payne Whitney represented the very exclusive set. Year by year the Adirondacks is receiving more visitors.

Summer as well as Autumn is popular there, especially in the neighborhood of the Upper St. Regis. There for a part of the season were ex-Governor and Mrs. Levi P. Morton and their daughters, Mrs. Seward Webb, Mr. and Mrs. Anson Phelps Stokes, Bishop and Mrs. Potter, Mr. and Mrs. William Rockefeller, Jr., and Mr. and Mrs. Alfred Vanderbilt.

Lenox had a short Autumn season. The entertaining there took the form of dinners and musicales.

After a month of suburban life and a rest from the more strenuous gayeties of the Summer society flocked back to town for the Horse Show in the second week of November. Almost immediately following was the opening of the opera season with a new impresario and a redecorated opera house. The opera opened with "Rigoletto," in which sung the famous tenor, Caruso, Signor Scotti and Madame Sembrich. The parterre and grand tier never presented a more brilliant appearance. The few boxes which were not occupied by their original owners on account of family affliction had new tenants, and the representatives of the principal and leading New York families were all present.

There has been added to the many beautiful homes of the city a few new residences. That of Senator Clark on Fifth aveneu is almost completed and will be ready by the New Year. The Schwab palace is to be occupied this Winter, and it is now a magnificent specimen of architecture and adds greatly to the appearance of Riverside Drive in a neighborhood of splendid houses. Mr. and Mrs. I. Townsend Burden are to move into their new house at Fifth avenue and Ninety-second street in the Spring, and Mr. and Mrs. James B. Haggin will occupy their twin marble houses on the site of the Progress Club about the same time.

The Winter gayeties have begun famously. There are many debutantes, and after January a series of splendid private entertainments will be in order, to be carried out regardless of expense.

Mrs. Alfred G. Vanderbilt.

Mrs. Foxhall Keene.

Mrs. Harry Payne Whitney.

Miss Adelaide Randolph.

THE SOCIAL LEADERS AT THE ADIRONDACK CAMPS.

South Carolina.

Capital: COLUMBIA.

South Carolina has an area of 30,570 square miles, and by the census of 1900 had a population of 1,340,316. The first settlement within the borders of the State was made at Port Royal in 1562, and it was not until 1670 that a permanent settlement was made, at Albemarle Point. Seven years before Charles II. gave a grant of the territory to eight British noblemen. Slavery was introduced into the colony by Sir John Yeamans in 1671. Charleston was settled in 1680. In 1719 South Carolina became a royal colony, and in 1728 North and South Carolina were divided. In 1773, in unison with the other colonies, the people refused to use imported tea subject to tax, and a convention meeting in 1774 passed resolutions condemning the Boston Port bill. Representatives to the First Continental Congress were elected. On March 26, 1776, the Provincial Congress adopted a constitution and elected John Rutledge President, antedating the Declaration of Independence by nearly four months. During the Revolutionary War the

State was overrun by the British. The war in South Carolina ended in 1782 by the evacuation of Charleston. In 1788 the Constitution of the United States was ratified, and in 1790 the State Constitution was adopted and Columbia was made the capital.

In 1832 the State Legislature passed the "Nullification Act," declaring tariff laws unconstitutional. In 1850 John C. Calhoun, South Carolina's most distinguished statesman, died. The Ordinance of Secession from the Union was passed at Charleston in 1860, and in 1861 hostilities were begun which resulted in the Civil War. On January 9 the steamer Star of the West was fired upon by the batteries on Morris Island, and on April 13 of the same year Fort Sumter was reduced. During the Civil War the State was the arena of several campaigns, ending with Sherman's march to the sea, which practically ended the war within the State. From 1865 until 1871 there were reconstruction troubles, ending with the election of Wade Hampton as Governor of the State and his recognition by President Hayes. In 1886 Charleston suffered from a severe earthquake which caused much property loss. A State dispensary law for the regulation of the liquor traffic was passed in 1892. The present State Constitution was adopted in 1897.

Gov. D. C. Heyward.

South Carolina, like her sister Southern States, is primarily an agricultural State, though during the decade from 1890 to 1900 she advanced rapidly in manufacturing interests, and at present ranks second only to Massachusetts in the manufacture of cotton goods.

Events in 1903.—The most important law passed at the last session of the State Legislature was a child labor law providing for the elimination of child labor from factories, according to a progressive scale of age limit, as follows: Between May, 1903, when the law first went into effect, and May 1, 1904, the law prohibits employment in factories of children under the age of ten years; between May 1, 1904, and May 1, 1905, it prohibits those under eleven years, and after May 1, 1905, the age limit is fixed at twelve years, all children under that age being excluded from factories. The law makes exception in the case of those children whose parents are physically disabled from earning their support, and in the case of children of widows. The Senate on February 11 passed a bill prohibiting cotton and woollen factories and their operatives from engaging in sympathetic lockouts and strikes.

On January 15 N. G. Gonzales, editor of the State, published at Columbia, and an active opponent of the Tillman regime in the State, was shot and mortally wounded by Lieutenant-Governor James H. Tillman, a nephew of Senator B. R. Tillman. Lieutenant-Governor Tillman's friends claimed that the attack was due to editorials written by Gonzales, in which Tillman was denounced as being a liar, thief and blackguard. At the primaries held in 1902 Tillman had been one of the six candidates for nomination as Governor, and the State had singled him out for bitter personal attacks. He was indicted for murder on April 7, the trial being set for Columbia. A change of venue was asked and granted, and in September the trial was called at Lexington Court House, a few miles from the capital and situated in another county.

Floods caused by a cloudburst swept the towns of Pacolet and Clifton, in Spartanburg County, April 6, causing the loss of about eighty lives and damaging property to the extent of more than $3,000,000.

South Dakota.

—

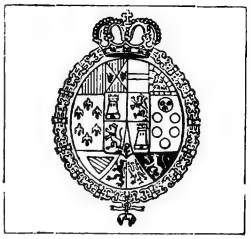
Capital:
PIERRE.

South Dakota has an area of 77,580 square miles, and by the census of 1900 had a population of 401,570. South Dakota became a State November 2, 1889, when the Territory of Dakota was divided into two States. The history of that part of the country will be found under Minnesota, Nebraska and North Dakota.

Agriculture and mining are the principal industries in South Dakota, though there has been an increase in manufacturing during the last few years. Agriculture is of large importance, and during 1902 and 1903 there was a large influx of population, owing to the excellent crops raised in the State the year before. Flour and grist mill products rank as most important manufactured articles, while butter, cheese and condensed milk are made for export.

Events in 1903.—A number of important laws of general interest were passed by the State Legislature at its last session. An old law regarding the taxation of fraternal insurance companies was changed to completely exempt such companies from taxation. A State Board of Medical Examiners was established to take the place of the State Board of Health in examining physicians for certificates. The number of days on which game birds may be killed was reduced from twenty-five to fifteen and the penalty for violation was increased. A general oil inspection law was passed which provides for three State inspectors, the branding of oil for quality and the inspection of gasoline. The fine for violation of the Sabbath laws was increased from $1 to $10. The incorporation of societies for the prevention of cruelty to animals was authorized and penalties fixed for cruelty. The provisions of the old liquor law which require notice to saloonkeepers to prevent sales of liquor to habitual drunkards was stricken out. A penalty was provided for soliciting a place on a jury. Fire insurance companies were made liable for the full amount of insured property in case of total loss by fire. Graduates of the State Law School are to be admitted to the Bar without examination by the court. A penalty was provided for cruelty to children, and by the same law it was made illegal to sell tobacco or cigarettes to children under sixteen years of age.

Gov. Charles N. Herreid.



Among the laws of less importance were the following: To admit life prisoners as competent witnesses in law cases; to authorize officers to enter places suspected of being gambling resorts and to destroy gambling devices; to reduce the minimum population for incorporation as a town from 1,000 to 250; to provide a penalty for the theft of gas, water or electricity; to prohibit druggists from selling liquor except on prescription in "no license" towns; to prevent the use of force in vaccination; to require peddlers to secure licenses and to fix penalties for refusing; to amend burglary penalty from 10 to 15 years in second degree, 5 to 15 years in third degree; to require petitioners for submission of the liquor license question to be freeholders; to change the Pure Food law to require annual instead of semi-annual reports, and to reduce penalties from $500 to $50 and $100 to $10; to provide for a State Department of Horticulture and for publication of the reports of the same; to give to the Insurance Commissioner

power to shut out insolvent mutual companies. A. B. Kittridge was elected United States Senator by the State Legislature on January 20 by a vote of 120 to 12. The Democratic candidate was John A. Bowler. Senator Kittridge at the time of his election was filling the unexpired term of the late Senator James H. Kyle. Shortly after the opening of the session a bill was introduced for the amendment of the divorce laws of the State so that citizens of other States might find more difficulty in using South Dakota as a convenience for securing divorces. It seemed to be the opinion in the State, however, that South Dakota divorce laws were as stringent as those of many other States, and no changes were needed. The question of the removal of the State capital from Pierre to one of the three towns which aspired to the honor of being the government centre occupied the opening days of the session. This question has been agitated for several years, but no definite action has been taken. The towns of Mitchell, Huron and Redfield were aspirants for the honor.

Spain.

—

Capital: MADRID.

The present reigning House, that of Bourbon, has been active in the Government of Spain for more than two centuries. Succeeding the House of Hapsburg, on the accession of Felipe V., in 1700, it remained in power until 1869, with the exception of the six years during which Spain was ruled by a Bonaparte. The short reign of the House of Savoy was followed by the republic, but on the restoration of the monarchy, in 1875, it was a Bourbon, Alfonso XII., who occupied the throne.

The present ruler, Alfonso XIII., was born May 17, 1886, after the death of his father, and at once succeeded to the throne, which in the meantime had been occupied by his sister, Donna Maria de las Mercedes, who was born September 11, 1880, and who married Prince Carlos of Bourbon February 14, 1901. At the birth of the infant King his mother, Queen Maria Christina, the daughter of the late Archduke Karl Ferdinand of Austria, took oath as Regent, a position which she held until the King reached his majority, May 17, 1902, when he assumed charge over the kingdom.

According to the Constitution of 1876 the monarch is inviolable, but his ministers are responsible for his acts, and all his decrees must be signed by at least one of them. It is also provided that the Cortes must approve the King's marriage before he can contract it, and he is expressly forbidden to marry any one who would be excluded by law from succession to the throne.

The Heir Apparent.—If the present King should die without offspring the throne would revert again to his eldest sister, the Infanta Donna Maria de las Mercedes.

The Ministry.—Premier, Marquis Villaverde; Foreign Minister, Count San Bernardo; Minister of Justice, Senor Santos Guzman; Minister of Finance, Senor Besada; Minister of War, General Martitegui; Minister of the Navy, Senor Estran; Minister of the Interior, Senor Garcia Alix; Minister of Public Instruction, Senor Bugallal; Minister of Agriculture, Senor Gassot.

The Nation.—Spain is a constitutional monarchy in which the executive vests in the King, together with his Council of Ministers. The legislative power devolves upon the King and the Cortes, or two-chambered Legislature, jointly. The Upper Chamber consists of not more than 360 members, one-half of whom are elected by the State for a term of five years, while the other half are Senators, who hold office by the right of family or because of other official positions, and 100 who are appointed by the King himself. The Congress, or Lower House, is composed of Deputies, one being representative of each 50,000 of population. The initiative in proposing laws rests with the King or either House.

King of Spain.

The national church in Spain is the Roman Catholic, and to this faith nearly the entire population adhere. Liberty of worship is otherwise somewhat restricted. Education has been so shamefully neglected that the last educational census establisned the fact that 65 per cent of the entire population could neither read nor write. There are numerous public schools, however, and some fine universities, but even primary education is only nominally compulsory. Public special schools are provided.

The Colonies.—It was not many years ago when the Spanish colonial possessions were among the most valuable in the world, but the cession of the principal island possessions to the United States and Germany and the relinquishment of Cuba has reduced them to about 253,000 square miles in Africa. Of course, the Canary Islands are considered a part of Spain for administrative purposes, and they possess an area of 2,808 square miles and a population of nearly 350,000, but, besides this territory, Spain's only possessions are as follows:

THE SPANISH POSSESSIONS.

Possessions.	Area Sq M.	Population.	Revenue.	Expenditure.
Rio de Oro and Adrar	243,000	100,000	.....	.....
Rio Muni and Cape San Juan	9,000	302	.....	.....
Fernando Po, Annaboa, Corisco, Elobey, San Juan	850	23,709	.....	.....
Totals	252,850	124,011	$26,883*	$427,483*

*1902 estimate.

About 80 per cent of the area of Spain is productive, and one-third of this is devoted to agriculture. Its manufactures are still small, but its mining interests are extremely valuable, and its sardine fisheries are very productive. In 1901 the imports amounted to $169,355,390, while the exports were $138,416,196.

Events in 1903. — A Cabinet council held March 26 approved the appropriation of $30,000,000 for military purposes and fixed the strength of the army at 100,000 men. On account of the increased expenditure demanded by the Ministers of Marine, War and Public Works, Senor Villaverde, Minister of Finance, resigned his post in March, and Senor Rodriguez San Pedro was appointed in his place. In June a vote to raise the size of the navy to its former strength caused the resignations of the entire Cabinet. Marquis Villaverde was recalled and given the duty of organizing a new Cabinet, which was approved on June 19.

A convention between France and Spain, signed in 1882, was brought to the attention of the Government early in the year. The convention provides for the construction of two railway lines through the Pyrennes, one to run from Saragossa to Oloron, in France, and the other from Lerida to St. Girons. Such lines will connect French southern railways with several Spanish lines along the Mediterranean and in the interior of the peninsula and open a means of quick communication with the Spanish ports nearest to Oran and to other Algerian ports.

Spain was given an award of $337,500 by the British Court of Sessions in February, for the Clydebank Engineering and Shipbuilding Company's delay in delivering four torpedo boat destroyers which had been intended for use during the Spanish-American War.

The arrangement of an engagement between King Alfonso XIII. and Princess Louise Francois, daughter of the Countess of Paris, was rumored in March, but no official announcement was made. On May 9 Admiral Cervera was gazetted a life Senator.

On August 18 he resigned his post as Chief of Staff of the navy.

A bread riot occurred at Valladaloid in February, during which several persons were injured by the gendarmes. Barcelona University was closed in March, owing to persistent demonstrations by the students against Senor Allende Salazar, Minister of Public Instruction. On April 3 and 4 the demonstration became a riot, and the police found difficulty in coping with the crowds of students and workingmen. Fourteen were injured seriously. The week before even more serious trouble occurred at Salamanca, when several students were killed. King Alfonso was fired upon by an assassin on January 10 while returning from church. No one was hit by the bullet, and the man who fired it was arrested. He was adjudged insane.

A meeting of Republican agitators was held at Madrid on March 25, at which 5,000 were present. Prof. Salmeron was chosen leader of the movement.

The following were the budget estimates for 1903: Revenue, $190,235,645; expenditure, $189,732,370. On March 31, 1902, the public debt of Spain was $5,205,090,500.

Spiritualism in 1903.

MARY T. LONGLY,
Secretary National Spiritualists' Association of United States and Canada.

Spiritualism as a religious and philosophical movement or cult differs from most denominations and churches in respect to the obtaining of statistics concerning its advocates and its media, or ministers, from the fact that, unlike theological teachers generally, its teachers are not educated in ministerial lore, and, as a rule, receive no training at schools of divinity or other colleges. Spiritualistic mediums and preachers are usually taken from the household, often at an early age, the workshop, the common schools and from the humble walks of life, although a goodly number have been developed for their spiritual calling among the influential, the educated and the wealthy class. While a census may be taken of the pupils and graduates of schools of divinity, and a correct estimate of teachers and laymen in any denomination of theological churches can be made, it is difficult to ascertan how many spiritual mediums there are in any city or town or how many avowed Spiritualists there may be, since it has been the custom in many places among the masses to look with disfavor upon Spiritualists and to frown upon professed mediums as if their dealings with things spiritual were uncanny, or worse. Hence, many sensitives who are fine mediums for the manifestation of spirit power and intelligence, and many persons who are Spiritualists from conviction and knowledge, prefer to hide the fact within their own breasts or in the bosom of their family, rather than to risk receiving censure or scorn from neighbors and the world.

While theological students pass through a special training in order to assume their ministerial duties, mediums are developed in their homes and made ready for their work; while church people usually have to attend Sunday service at church in order to enjoy the comforts of their religion, Spiritualists who have mediums in their own homes hold a little meeting or circle once or oftener a week and receive the blessings of their religion without attending any church or subscribing to any articles of faith or formulas of sect and creed. Thus it will be seen that organized societies among Spiritualists, or churches, are not as necessary to the average believer—if he is a medium or is in touch with one—as religious churches and societies are to the theologians. We cannot then estimate the number of Spiritualists in the country by the number of societies and churches of that religion, nor can we calculate the number of mediums — disseminators of the cult— by a census of those who are in public life, since a thousand mediums may be in a large city, each of whom is a teacher and minister to his or her immediate friends and associates, and none of whom may be known at large as a medium or worker in the cause.

It has been estimated that in the United States and Canada there are about 1,500 avowed Spiritualists. From knowledge brought to us through many private sources we are satisfied that at least as many more intelligent individuals are firm believers in Spiritualism, having received knowledge of immortality through media who are unwilling to have their names published or to have it known that they are Spiritualists. About 1,600 psychics are known to the public in their respective localities, and we are assured that at least 12,000 mediums exercise their powers privately. During 1903 there has been a marked increase in the number of mediums and of Spiritualists in this country. In organized work two State associations have been established, and a number of local societies. State associations usually are delegate bodies. They are composed of chartered societies from different parts of the State. The National Spiritualists' Association has received reports from its nineteen State associations that in their respective sections new local societies have been established during the year, most of which have become affiliated with the State organizations.

The National Spiritualists' Association is composed of chartered societies, both State and local, and during the present year it has chartered societies in Massachusetts, Rhode Island, Florida, Louisiana, Missouri, Pennsylvania, Indiana, Colorado and Utah, and has organized a State association in Montana, and its officials have been assured by their co-workers that Spiritualism is spreading in every portion of the United States, Canada and British Columbia.

SUICIDES—See Crime.

Sweden and Norway.

Capitals:
STOCKHOLM,
CHRISTIANIA.

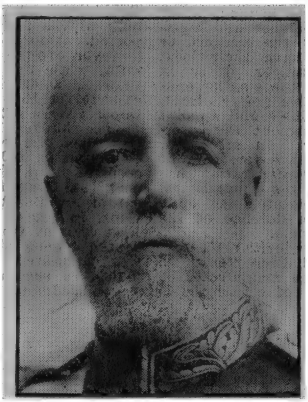
The reigning family of Sweden, or the House of Ponte Corvo, is descended from Marshal Bernadotte. Prince of Ponte Corvo, who was made heir apparent to the Crown by a vote of Parliament, August 21, 1810. On February 5, 1818, he succeeded to the throne and reigned, under the name of Carl XIV., until his death, March 8, 1844. His son succeeded him, as Oscar I., and when he died, in 1859, his son, Carl XV., assumed the throne. His premature death, without male children, in 1872, left the throne vacant, and his brother, the present ruler, was elected by the vote of the two Diets.

King Oscar II. was born January 21, 1823, and assumed the throne September 18, 1872. On June 6, 1857, he married Princess Sophia (born July 9, 1836), the daughter of the late Duke Wilhelm of Nassau. They have had four children.

The Heir Apparent.—The heir apparent to the throne is Prince Gustaf, Duke of Wermland, the eldest son of the King. He was born on July 16, 1858, and was married, September 20, 1881, to Princess Victoria, daughter of the Grand Duke of Baden. They have had three children.

When the King decided to withdraw temporarily from the cares of government, January 27, 1903, the Swedish-Norwegian Council invited the Crown Prince to assume the Regency of the two kingdoms, and he since has acted in that capacity.

The Ministry.—The Council of State of Sweden is composed as follows: Minister of State, Erik Gustaf Boström; Minister of Foreign Affairs, Carl H. T. A. Lagerheim; Minister of Justice, Ossian Berger; Minister of War, Jesper I. Crusebjorn; Minister of Marine, Adolf A. L. Palander; Minister of the Interior,



Hjalmar George Westring; Minister of Finance, Ernst F. W. Meyer; Minister of Education and Ecclesiastical Affairs, Carl von Friesen; Minister of Agriculture, Albrecht Theodor Odelberg; Ministers without portfolios, Karl Sigfrid Husberg and Johan Olof Ramstedt.

The Council of State of Norway is composed as follows: Minister of State, Foreign Affairs, Commerce, Navigation and Industry, Otto Albert Blehr; Minister of Ecclesiastical Affairs and Public Instruction, Vilhelm A. Wexelsen; Minister of Justice, Soren Tobias Arstad; Minister of Agriculture, Wollert Konow; Minister of Public Works, Jorgen G. Lovland; Minister of Finance, Elias Sunde; Minister for Defense, Lieutenant-Colonel Hans G. S. Stang; Commissioner of Public Accounts, W. Konow. The Norwegian delegation to the Council at Stockholm is constituted as follows: Ole Anton Qvam, Minister of State; Aanon Gunnar Knudsen and Sigurd Ibsen.

The Nation.—With the election of the King of Sweden to the throne of Norway, in 1814, and the proclamation, one year later, of the Riksakt, or National Charter, the two kingdoms became bound in a union, indissoluble and irrevocable. They are, however, interdependent.

Sweden.—In Sweden the King exercises legislative power only in matters of political ministration. In all other cases it vests in the Congress, or Diet, which consists of two houses, both of which are elected by the people, the 150 members of the First Chamber for terms of nine years, while those of the Second Chamber are elected for three years only.

While full religious liberty is enjoyed in Sweden and Norway, it is provided that the King must be a member of the Lutheran Protestant Church, the State religion. Education is both compulsory and free, and the laws regarding it are well enforced.

King of Sweden.

The principal agricultural products of Sweden are wheat, rye, barley, oats, pulse and potatoes. Large numbers of cattle are also raised, both for home consumption and for export. The commercial report for 1900 gives the imports for the year at $133,733,775, and exports at $97,833,725. The budget of revenues and expenditures for 1903 balance at $43,117,050.

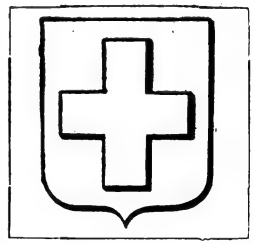
Norway.—Under the Constitution of Norway the legislative power vests in the Storthing, or Legislature, against which the King has limited veto power. The Storthing is a two-chambered body of 114 members, thirty-eight from the towns and seventy-six from the rural districts. They are elected every three years, and, when sitting, three-fourths of them form the Odelsthing, or Lower House, and one-fourth the Lagthing, or Upper House.

In religion and education Norway has the same general features as Sweden. About 22 per cent of the area of Norway is in forest, and this timber is one of its most valuable products. The fisheries are also of great value, but scarcely 3 per cent of the area of the country is under cultivation. The trade report for 1901 shows the imports to have been $71,811,000, as against exports amounting to $41,276,475. The budget for 1902-03 made the revenues and expenditures balance at $24,462,500.

Events in 1903.—In the speech from the throne at the opening of the Riksdag it was announced that the Government was considering bills for the reorganization of the consular service and extension of the parliamentary franchise, the introduction of a duty on malt and the raising of the duty on all spirits. The duty on malt and spirits would produce a revenue of about $19,828,205. It was also proposed to reduce the duty on maize, which would entail a reduction of revenue of $140,625. The Norwegian Strothing passed a vote declaring for an independent consular service in order to assure the maintenance of the good relations existing between the united kingdoms.

On January 23 King Oscar temporarily resigned the duties of government to the Crown Prince Gustaf at the advice of his physicians. On March 31 the regency terminated, the King having recovered his health sufficiently to resume his work.

Serious difficulty arose between Norway and Sweden in the early part of the year owing to the constant desire on the part of the former for autonomous government. It was reported in January that Norway was mobilizing her army as a menace to Sweden. The relations continued intact during the year, however. Because of a crop failure in the Fall of 1902 and a scarcity of fish a serious famine threatened northern Sweden in January. Fully 70,000 persons were affected. Swedish people in other parts of the world contributed to the relief of the brothers at home and the Government took active steps to render aid. The scarcity of fish was attributed to the rapacity of the seals along the coast, and at one time the Government considered the project of sending warships to the points where they were most numerous to destroy as many as possible.



Switzerland.

Capital: BERNE.

The defensive league which was the foundation upon which the Republic of Switzerland was built was first formed in 1291, when, on the 1st of August, the men of Schwyz, Uri and Lower Unterland entered upon their alliance. By 1513 this league of three cantons had assumed a membership of thirteen, and, little by little, other associated and protected territory was acquired, until 1798, when, through the influence of France, the Helvetic Republic was formed and a regular Constitution was adopted. For reasons which are obvious to students of history the league was dissatisfied with the new conditions, and in 1803 Napoleon, in his Act of Mediation, provided a new Constitution, under which the number of cantons was increased to nineteen.

It was in 1815 that the perpetual neutrality of Switzerland and the inviolability of her territory was first formally recognized by the Powers of Europe, and this federated pact, drawn up at Zurich and providing for three new cantons, was eagerly accepted by the vote of the Council of Vienna, and this pact remained unaltered until 1848, when a new Constitution was accepted. This remained in force until 1874, when the present Constitution was prepared and adopted.

The President of the Confederation and the Vice-President of the Federal Council are the highest executives of the Confederation. They are elected by the Federal Assembly in joint session and hold office for one year, from January 1 to December 31. While they are not eligible for re-election to the same office until after the expiration of another year, the Vice-President is usually elected to succeed the outgoing President. The President for 1903 was A. Deucher, of Thurgau, and the Vice-President of the Federal Council was R. Comtesse of Neuchatel.

The Council.—As the composition of the Federal Council changes each year with the inauguration of the new President, it is impossible to give the list of members for 1904. The seven administrative departments, however, are: (1) Foreign Affairs, (2) Interior, (3) Justice and Police, (4) Military, (5) Finance and Customs, (6) Agriculture and Industry, and (7) Posts and Railways. The Federal Council meets at Berne, the seat of all the administrative authorities.

The Nation.—According to the Constitution, the supreme legislative powers are vested in a parliament of two chambers—the Staenderath, or State Council, and the Nationalrath, or National Council. The higher chamber is composed of forty-four members, who are not only chosen but paid by the twenty-two cantons which they represent, two for each canton. The lower house consists of 147 members, who

are elected by direct vote at the rate of one deputy to every 20,000 of population. In addition to these bodies there is the Bundesrath, or Federal Council, to which the chief executive authority is assigned. The members of this Council are not permitted to hold any other office in the Confederation or to transact any other business, and it is through their hands that legislative measures are introduced to the deliberative councils.

At the elections in Switzerland every citizen who has passed his twentieth birthday is entitled to vote, and any voter, clergymen excepted, may become a Deputy. The Federal Government is supreme in national matters. It may declare war or make treaties. It regulates the postal and telegraph systems, the coinage and issue of bank notes, and the weights and measures of the republic. It legislates in many other matters, but so far as their independence and legislative powers are concerned each of the cantons, or demi-cantons, is sovereign. They have their local governments, which, in many instances, differ in their organization, while in some of the smaller cantons the people exercise the legislative power direct, meeting at stated periods to make laws and appoint officials for their administration, without the intervention of any parliamentary body. In all cases, however, the principle of the absolute sovereignty of the people is maintained. The Confederation has no power to levy direct taxes, and the fundamental laws of the republic forbid the maintenance of a standing army. To provide for the defence of the country every citizen has to bear arms.

While the government of the Protestant Church, which is Calvinistic in doctrine and Presbyterian in form, is under the supervision of the magistrates of the various cantons, absolute liberty of conscience is guaranteed by the Constitution. No bishop can be established in Swiss territory, however, without the consent of the Federal Government, and the Order of Jesuits and its affiliated societies are debarred from residence in the country.

Education in Switzerland is not centralized, the civil authorities of each canton having charge of the primary schools. In all the cantons, however, such instruction is free, and in most instances it is compulsory. Besides these primary schools there are private schools for both boys and girls, commercial and technical schools, and improvement schools for recruits, as well as several institutions for higher education.

Switzerland is largely an agricultural country, there being no less than 300,000 peasant farmers. Rye, oats and potatoes are the principal crops, the bulk of the food consumed in the country being imported. Among the important agricultural industries, however, are the manufacture of cheese and condensed milk, while the vines under cultivation furnish more than 2,000,000 hectoliters of wine annually. The exports for 1901 amounted to $172,623,000, while the imports were $223,714,000.

The budget estimate for 1903 was as follows: Revenues, $21,286,000; expenditures, $22,109,000.

Events in 1903.—Very little of general importance occurred in Switzerland during the year. The report that Germany intended to surround the Swiss canton of Basel with a regular circle of fortifications, to act as a check to a possible advance of a French army from Belfort to seize the Rhine bridges, caused considerable comment within the country. It was suggested that Switzerland build four forts, placed in such a position as to protect Basel from a bombardment.

Tariffs; The Existing Systems Defined.

One of the matters of vital importance to every person engaged in commerce is the system of tariff affecting the value of the markets of any one country to the people of any other. At the present time the four great commercial countries of the world—Great Britain, Germany, France and the United States—are each using a different system of tariff regulation for the goods which they import. Great Britain may be said to be practically without a tariff; Germany uses a multiple tariff, made up of a general and a conventional schedule; France uses a multiple tariff, composed of a maximum schedule, and the United States may be said to use a general tariff which is applied to imports without discrimination as to their origin.

The systems, therefore, may be classed under three heads, namely: (1) The general tariff system; (2) the general and conventional tariff system, and (3) the maximum and minimum tariff system.

The general tariff system is one which has a single schedule of import duties, which is applied to the goods of all countries without distinction. Such a tariff system is altogether an act of the legislative branch of the Government. It takes account only of the needs of the home country and recognizes foreign commercial relations only in so far as the latter are in harmony with home interests. It is difficult to maintain where the schedule contains many high protective duties, owing to the fact that foreign countries will endeavor to make with each other commercial treaties to mutually guarantee tariff concessions, while the State using the general tariff cannot make such treaties and is not in a position to secure a share of those advantages. Some countries have sought to solve the problem by making treaties and then placing the concessions in the general tariff, where they would apply to all nations.

The system of general and conventional tariffs, however, makes a distinction between goods which come from different countries. The fact that nations which make use of a general tariff often find themselves compelled to change this tariff when they later make commercial treaties is evidence of how difficult it is to maintain such a tariff intact. But since modern nations are practically compelled to have more or less close commercial relations with one another, some way of regulating these relations must be found, and the usual method of securing this end is by means of a mutual understanding between the countries in question. Generally one nation declares itself ready to grant some concession or reduction in its tariff if a corresponding concession is offered in return. If an agreement is reached a treaty is then made, and, as a rule, the willingness is expressed to make further treaties with other countries under similar conditions. Such a treaty will usually introduce new tariff rates. If the State substitutes these rates for those in the general tariff, then no change in the system takes place. The usual course, however, is for the State to now maintain two columns in its tariff schedule, the first for those countries enjoying the "most-favored-nation" treatment, which is called the treaty or conventional tariff, and the second containing the original rates for those countries not receiving this treatment, and termed the general tariff.

The rates of the conventional schedule are, of course, rather higher than those of the general schedule. It may be, however, that one nation regards it of importance that a certain rate, a reduction of which is refused by the other power, should not be increased during the period for which the treaty is made. The making of an agreement that rates shall not be changed is termed "binding" such rates—that is, the conventional tariff schedule is composed of reduced and "bound," or fixed, rates. The general schedule may be changed at any time without breaking any of the conditions of the treaty, but the conventional schedule can only be changed by the consent of both parties.

The general tariff is framed with the acknowledged purpose of being the basis for the negotiation of commercial treaties. A conventional schedule is drawn up in these treaties, and by the action of the most-favored-nation clause the conventional tariff becomes so extended in application that, as a rule, it is the exception to apply the general tariff. For this reason the general tariff is regarded mainly in the light of a preliminary sketch of the real tariff. As a consequence, the rates in the general schedule are not infrequently made rather high, so that they can readily be reduced and concessions demanded in return. There is always the possibility, however, that the negotiations may be broken off for some unforeseen reason and the undesired high rates become actual rates. This possibility generally exerts a restraining influence in the framing of the general tariff. The course which events in the field of commercial policy may take will always exert considerable influence in the formation of such tariff schedules, but the main consideration must always be the needs of the home producers.

The maximum and minimum tariff system is distinguished from the above system, first of all, in its form. Instead of having two rates for a few articles it has two rates on most articles on which duties are imposed, and for this reason is frequently called the double tariff system. In the application of these rates the maximum schedule corresponds to the general schedule and the minimum schedule to the conventional schedule of the system just described, since the minimum rates are given only to those countries which receive the most-favored-nation treatment. The characteristic difference between the two systems, however, arises from the difference in their origin. The minimum schedule is not drawn up by negotiations between the executives of two countries, but is framed by the legislative body at the same time that the maximum schedule is made—that is, the legislative power fixes two rates of duty on each article in the tariff. The higher rate is the one which fixes the maximum extent to which those articles may be taxed on entering the country; the lower, or minimum rate, is the one which fixes the minimum extent to which the duty may be lowered. If it is desired to make commercial treaties at any time these two rates show the exact limits between which the treaty rates are to be fixed.

Tennessee.

—

Capital: NASHVILLE.

Tennessee has an area of 42,056 square miles, and by the census of 1900 had a population of 2,020,616. Tennessee was probably first visited by De Soto during one of his exploring expeditions, but no settlement was made until 1754, when a party from North Carolina entered the State and attempted to effect a foothold there. It was driven out by Indians, but two years later a permanent settlement was made and Fort Loudon was built on the Tennessee River, about thirty miles from the present site of Knoxville. In 1760 the fort was attacked by the Indians and the whites were compelled to capitulate. In 1761 an armed force from North Carolina and Virginia succeeded in subduing the savages and settlements increased rapidly along the Watauga and Holston rivers. From 1777 until 1784 the territory formed part of North Carolina and in 1790 it was organized, together with Kentucky, as a part of a territory south of the Ohio River. In 1794 a distinct Territorial Government was given Tennessee, and in 1796 it was admitted to the Union as a State. The seat of Government was originally at Knoxville, and was changed at various times to Kingston, back to Knoxville, to Nashville, again to Knoxville, then to Murfreesboro, and, in 1826, to Nashville, where it is located at the present time. On January 7, 1861, the General Assembly of the State was convened in special session to consider what action should be taken in regard to the impending war between the South and North. The people in east Tennessee were opposed to secession, while those in the western part of the State were in favor of separation from the Union. The Governor, Isham G. Harris, favored the Southern cause and refused to honor the call for troops made by President Lincoln when Fort Sumter was fired upon. In May,

1861, a military league was formed with the Confederate States, and on June 8 an Ordinance of Secession was passed. During the Civil War the eastern part of the State was the scene of some of the hardest fighting of the conflict. In January, 1865, a convention assembled at Nashville and proposed amendments to the Constitution annulling the Ordinance of Secession and the military league, and abolishing slavery. These were ratified February 22, 1865.

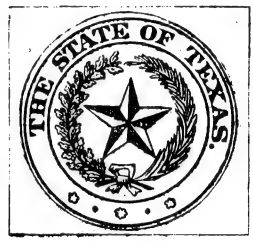
The manufacturing interests of Tennessee have developed rapidly during the last decade, due largely to the exploitation of the coal and iron deposits. Flour and grist mill products rank of first importance, while the manufacture of lumber and timber has second place. Tennessee produces some of the finest tobacco grown in the United States.

According to the Crop Reporter, the principal crops of Tennessee in 1902 were as follows: Corn, 3,337,047 acres, 73,081,329 bushels; Winter wheat, 840,381 acres, 6,050,743 bushels; oats, 186,071 acres, 3,219,028 bushels; potatoes, 26,405 acres, 1,637,110 bushels; tobacco, 59,830 acres, 38,889,500 pounds.

Gov. James B. Frazier.

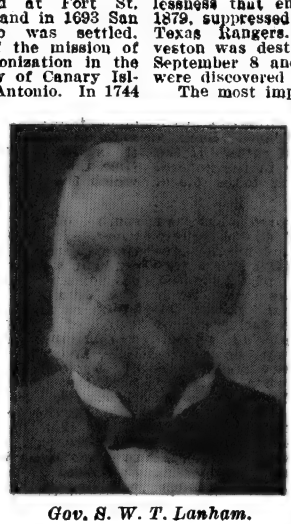
Events in 1903.—The State Senate indorsed, on April 15, the speech of ex-President Grover Cleveland on the negro question, in which the speaker recommended a form of adjustment of the question which he considered would satisfy both the negro and the Southern white man. Several important bills were passed by the Legislature at the session which closed in April, among which was a bill making radical changes in the fish and game laws of the State, lengthening the close season for a number of birds and animals and making the penalties heavier for infractions of the law.

Pittsburg capitalists purchased 72,000 acres of the richest iron fields in the State in February, with the intention of developing the iron industry. An initial investment of $5,000,000 was made in the construction of furnaces, which are to equal in capacity any in the Chattanooga or Alabama district. Rolling mills and other plants for finishing will be erected, and iron will be carried from rough ore to structural steel on the premises of the company.



On August 22 the 119th anniversary of the organization of the State of Franklin was celebrated at Jonesborough. The State of Franklin was constituted of seven counties of Tennessee and North Carolina, and while it was short-lived, it existed as an individual State. The celebration in 1903 was the first public observance of the event.

Floods in the Mississippi in March caused serious damage to the lowlands of the State, and at one time the city of Memphis was threatened. The levees on both banks of the river were strengthened at weak points, and every effort was made to keep back the water. In the latter part of the month the Governor asked aid of the Federal Government for tents to shelter those rendered homeless in the lowlands. Refugees had congregated in Memphis in large numbers, and the city was unable to cope with them or to provide shelter.



Texas.

—

Capital:
AUSTIN.

Texas has an area of 267,780 square miles and by the census of 1900 its population was 3,048,710. The first record of a white man visiting Texas was in 1685, when La Salle landed on the Gulf coast. He was murdered two years later. In 1690 the Spanish mission of San Francisco was founded at Fort St. Louis, and in 1693 San Antonio was settled, followed in 1718 by the founding of the mission of San Jose de Aguayo. The first colonization in the State occurred in 1728, when a party of Canary Islanders and Mexicans settled at San Antonio. In 1744 Alamo Mission was founded and in 1790 the last of the missions was founded at Refugio. In 1803, when Louisiana was purchased by the United States, a dispute arose as to the boundary of Texas, and in 1819 the United States claims upon this territory were exchanged for Florida. In 1821 Moses Austin secured a grant of land for colonization purposes, and in 1824 Texas was annexed to Mexico as the Province of Coahuila. From this time until 1836 there were fights between the Americans and Mexicans, and in 1835 the Texans rose against Mexico, S. F. Austin being made commander-in-chief of the American troops. In 1836 Santa Anna, at the head of the Mexicans, invaded the country and was defeated on April 21 of that year. Mexican troops were withdrawn and Sam Houston was chosen President of the Republic of Texas. The independence of the State was recognized by the United States in 1837. In 1839 Austin was made the capital of the State.

Gov. S. W. T. Lanham.

More trouble with Mexico occurred in 1842, and in 1845 Texas was annexed to the United States. The Mexican War occurred during the period from 1846 to 1848. In 1850 the land claims were settled, and during the same year Texas released New Mexico to the United States for a consideration of $10,000,000. In 1861 Texas joined the Southern Confederacy, and on May 13, 1865, the last battle of the Civil War was fought on Texas soil, at Brazos de Santiago. A new State Constitution was adopted in 1866. Texas was readmitted to the Union in 1870. In 1865 began a period of lawlessness that ended in 1879, suppressed by the Texas Rangers. Galveston was destroyed by a storm and tidal wave on September 8 and 9, 1900. The Beaumont oil fields were discovered in 1901.

The most important industry of Texas is the manufacture of lumber and timber products, while the manufacture of cottonseed oil and cake ranks second. Much of the land is devoted to cotton raising and to cattle grazing. In 1900 Texas ranked sixth in wheat raising and grist and flour mill products have a large place in the State's industries. The discovery and development of the oil fields have recently rapidly increased the growth of sections of the State and have brought enormous wealth into the region.

Events in 1903. — Among the more important acts passed by the last session of the State Legislature were the following: An act to authorize suburban railway companies to issue stocks and bonds, under certain conditions; an act prohibiting the employment of children under twelve years of age in any factory using machinery, prohibiting the employment in factories of children between the ages of twelve and fifteen who cannot read and write, and prohibiting the employment of children under sixteen years of age in any mine, distillery or brewery; an act prohibiting the employment of trainmen, telegraph operators or telegraph dispatchers for more than sixteen consecutive hours without eight hours' sleep; an act prohibiting the buying and selling of

pools on horse races; an act appropriating $50,000 to be paid as a reward to any one who will discover and furnish a practical remedy that will exterminate the cotton boll weevil; an act prohibiting the sale of intoxicating liquor to habitual drunkards; an act to prevent the coercion or blacklisting of any employe or laborer; an act to define, prohibit and declare illegal trusts, monopolies and conspiracies in restraint of trade; an act to protect and preserve the wild game, wild fowl and wild birds of the State.

Because of violations of the State anti-trust laws the Appellate Court decided in February to revoke the permits of the National Cotton Oil Company and the Southern Cotton Oil Company to do business in Texas. The companies were charged with combining and pooling between themselves and other corporations and persons to regulate and fix the price of cotton seed. The decision affected about seventy-five large cotton mills in the State. On March 25 the Appellate Court declared the Galveston Municipal Commission to be an illegal body and the charter provisions creating it to be unconstitutional. The decision stated that the principle and guarantee of local State government are against municipal officers being appointed by the Governor or the State Legislature.

The State was authorized on March 5 to reopen and enlarge its iron foundries at the penitentiary at Rusk, which had been idle for several years. Clashes between the Prohibition and anti-Prohibition forces over the county elections in the State in June resulted in rioting at Hempstead, and troops were sent to prevent bloodshed. In February snow and floods caused suffering in the vicinity of Austin and on the plains. Part of San Antonio was under water, and at all points along the rivers the high water did much damage. Fire in the oil fields near Beaumont did $1,000,000 worth of damage in April.

Theosophy; Its History and Objects.

In 1875 H. P. Blavatsky founded the Theosophical Society of New York, from which centre it spread to other parts of the world. On her death, in 1891, she was succeeded by William Q. Judge as the head of the society. In 1895, in consequence of a certain ambitious member in England trying to destroy its usefulness and making an absurd, malicious and wholly unwarrantable attack upon W. Q. Judge, the American section declared its autonomy, under the title of the Theosophical Society in America, electing W. Q. Judge president for life. Similar action was taken by the other sections of the society in Europe, Australia and India, they also electing W. Q. Judge president for life. In 1896 W. Q. Judge died, appointing as his successor Katherine A. Tingley, who, in that year and in the year following, made a theosophical crusade around the world, visiting the principal countries of Europe, also Egypt, India, Australia, Canada and nearly all the States of the Union, and establishing national centres and branches of the society. On January 13, 1898, at New York, Katherine A. Tingley founded the Universal Brotherhood Organization. At the great congress of the Theosophical Society in Chicago, February, 1898, the Theosophical Society adopted the constitution of the Universal Brotherhood and became an integral part of the organization which is now called the Universal Brotherhood and Theosophical Society. This action was later upheld in the United States Court in New York when a small minority attempted to get possession of the property, records and archives of the organization.

Mrs. Katherine A. Tingley.

In 1900 the international headquarters of the Universal Brotherhood and Theosophical Society and all its departments were moved to Point Loma, California, where is now the world's centre of this work. Among its departments are the International Brotherhood League, the Raja Yoga School for Children, the School of Antiquity, Theosophical Publishing Company, Isis League of Art, Music and Drama, Woman's Exchange and Mart, industrial departments, etc. The organization and all its departments are strictly unsectarian and non-political, and there are no salaried officers. All the workers are volunteers.

At the close of the Spanish-American War the International Brotherhood League, under the personal direction of Katherine A. Tingley, established an emergency hospital at Montauk and nursed and cared for thousands of sick soldiers. In 1899 Katherine A. Tingley organized a relief expedition to Cuba, and, with a staff of physicians and nurses and large supplies of food, medicine and clothing, rendered material aid to many thousands of Cubans left destitute by the late war. For this expedition, through the indorsement of the late President McKinley and General Joseph Wheeler, free transportation for workers and supplies were provided by the United States Government, and able assistance was also rendered by Hon. Emilio Bacardi, Mayor of Santiago de Cuba.

On her return to the United States Katherine A. Tingley brought with her several Cuban children and families for free support and education, and soon after the establishment of the Universal Brotherhood Headquarters at Point Loma, Cal., in 1900, a large number of Cuban children were brought by the International Brotherhood League, under the direction of Katherine A. Tingley, to receive free support and education at the Raja Yoga School at Point Loma, Cal. The International Brotherhood League has now established permanent headquarters at Santiago de Cuba, and a branch of the Raja Yoga School has recently been started there for the free education of Cubans.

J. H. FUSSELL,
Private Secretary to
Mrs. Katherine A. Tingley.

The publications of the organizations are "The New Century" (weekly) and "Universal Brotherhood Path" (monthly), both published at Point Loma, Cal., as well as others published in England, Ireland, Sweden, Holland, Germany and Australia. All profits arising from the sale of literature or from any of the industrial departments go toward enlarging the humanitarian work of the organization.

The leader and official head of the Universal Brotherhood and Theosophical Society, with all its departments, is Katherine A. Tingley, who holds the office for life, with power to appoint her successor. She appoints all the officers, and has the power of removal of any officer or member. Applicants for membership are placed upon a three-years' probation before being admitted.

Objects of the Universal Brotherhood.—The Universal Brotherhood was established for the benefit of the people of the earth and all creatures.

The Brotherhood is a part of a great and universal movement which has been active in all ages.

This organization declares that brotherhood is a fact in nature. Its principal purpose is to teach brotherhood, demonstrate that it is a fact in nature, and make it a living power in the life of humanity.

Its subsidiary purpose is to study ancient and modern religion, science, philosophy and art; to investigate the laws of nature and the divine powers of man.

Every member has the right to believe or disbelieve in any religious system or philosophy, each being required to show that tolerance for the opinions of others which he expects for his own.

Objects of the International Brotherhood League.—

1. To help men and women to realize the nobility of their calling and their true position in life.

2. To educate children of all nations on the broadest lines of universal brotherhood, and to prepare destitute and homeless children to become workers for humanity.

3. To ameliorate the condition of unfortunate women and assist them to a higher life.

4. To assist those who are, or have been, in prison to establish themselves in honorable positions in life.

5. To endeavor to abolish capital punishment.
6. To bring about a better understanding between so-called savage and civilized races by promoting a closer and more sympathetic relationship between them.
7. To relieve human suffering resulting from flood, famine, war and other calamities, and generally to extend aid, help and comfort to suffering humanity throughout the world without regard to nationality or condition.

Treaties of the United States.

The United States Government possesses a treaty of some kind with practically every nation in the world except the government of Uruguay. In some instances the treaty is merely the conventional one of amity, peace and freedom of commerce, while with other nations such friendly treaty relations have been established that every phase of daily intercourse is governed by conditions of reciprocity. The only nations with whom there is no treaty of amity are Roumania, Servia, Turkey, and, of course, Uruguay.

While many important treaties have been signed by the United States, however, those that are of the most vital consequence to the world are the international conventions which have been adopted in the interest of all nations, and to nearly all of which this Government has been a party, for it is by this means that the pacific settlement of international disputes has been provided for, the inhumanities of warfare minimized, the submarine cables protected and the cruelty of the African slave trade repressed.

Among the most important recent treaties have been those dealing with reciprocity in tariffs between the United States and other powers. In general reciprocity treaties have been made with countries near at hand, or with great powers where reduced tariffs have appeared to be advisable.

The most important international conventions are as follows:

INTERNATIONAL CONVENTIONS TO WHICH THE UNITED STATES HAVE BEEN A PARTY.

Character of Treaty.	Proclaimed.
Establishing International Bureau of Weights and Measures	Sept. 27, 1878
For the amelioration of the condition of the wounded in time of war	July 26, 1882
For the protection of submarine cables	May 22, 1885
For the international protection of industrial property	June 11, 1887
For the international and immediate exchange of official documents and scientific and literary publications	Jan. 15, 1889
For an international union for the publication of customs tariff	Dec. 17, 1890
General act for the repression of the African slave trade	April 2, 1902
Supplementary convention for the protection of industrial property	June 22, 1892
For the regulation of the importation of spirituous liquors into Africa	Feb. 6, 1901
For the pacific settlement of international disputes	Nov. 1, 1901
A declaration prohibiting (for five years) the launching of projectiles and explosives from balloons in time of war	Nov. 1, 1901
For the adaptation of the principles of the Geneva Convention in maritime warfare	Nov. 1, 1901
For the regulation of war on land	April 11, 1902

The Reciprocity Treaties.*—There have been three distinct tests of reciprocity in the trade relations of the United States: (1) The reciprocity treaty with Canada, existing from 1855 to 1866. (2) The reciprocity treaty with the Hawaiian Government, existing from 1876 to 1900. (3) The series of treaties framed under the McKinley Tariff act of 1890 with Brazil, Dominican Republic, Spain, for Cuba and Porto Rico, in 1891; and with Germany, United Kingdom, for British West Indies and British Guiana, Nicaragua, Salvador, Austria-Hungary, Honduras and Guatemala, in 1892. These continued in existence until the passage of the Wilson Tariff act.

The reciprocity agreements now in existence, framed under the Dingley tariff of 1897, took effect on the following dates, respectively: France, June 1, 1898; Portugal, June 12, 1900; Germany, July 13, 1900; Italy, July 18, 1900, and the following is a list of all the treaties and agreements which have been in force between the United States and foreign countries since 1850, the table having been prepared by the Bureau of Statistics:

Countries with which reciprocity treaties and agreements have been made.	Signed.	Took Effect.	Terminated.
British North American Possessions (treaty)	June 5, 1854	March 16, 1855	March 17, 1866
Hawaiian Islands (treaty)	Jan. 30, 1875	Sept. 9, 1876	April 30, 1900
Brazil (agreement)	Jan. 31, 1891	April 1, 1891	Aug. 27, 1891
Santo Domingo (agreement)	June 4, 1891	Sept. 1, 1891	do
Great Britain:			
Barbados (agreement)	Feb. 1, 1892	Feb. 1, 1892	do
Jamaica (agreement)	..do	..do	do
Leeward Islands (agreement)	..do	..do	do
Trinidad (including Tobago) (agreement)	..do	..do	do
Windward Islands (excepting Grenada) (agreement)	..do	..do	do
British Guiana (agreement)	..do	April 1, 1892	do
Salvador (agreement)	Dec. 30, 1891	Feb. 1, 1892 (provisional)	do
Nicaragua (agreement)	March 11, 1892	March 12, 1892	do
Honduras (agreement)	April 29, 1892	May 25, 1892 (provisional)	do
Guatemala (agreement)	Dec. 30, 1891	May 30, 1892 (provisional)	do
Spain, for Cuba and Porto Rico (agreement)	June 16, 1891		do
Austria-Hungary (agreement)	May 25, 1892	May 26, 1892	do
France (agreement)	May 28, 1898	June 1, 1898	Still in force.
Germany (agreement)	Jan. 30, 1892	Feb. 1, 1892	Aug. 24, 1894
do	July 10, 1900	July 13, 1900	Still in force.
Portugal and Azores and Madeira Islands (agreement)	May 22, 1900	June 12, 1900†	do
Italy (agreement)	Feb. 8, 1900	July 18, 1900	do
Switzerland (treaty of 1850)		June 1, 1898†	March 23, 1900

*The matter relating to reciprocity treaties was prepared from a special report of the Bureau of Statistics.
†Under "most-favored-nation" clause of the treaty of 1850, proclaimed November 9, 1855.

The following treaties or agreements have been negotiated and signed, and now await the action of the United States Senate:

With Great Britain: For Jamaica, signed July 22, 1899; for Turks and Caicos islands, signed July 21, 1899; for the Barbados, signed June 16, 1899; for Bermuda, signed July 24, 1899; for British Guiana, signed July 19, 1899. With France, signed July 24, 1899. With the Argentine Republic, signed July 10, 1899. There are also unratified agreements between the United States and the Dominican Republic, Nicaragua and Ecuador.

THE TREATIES AND CONVENTIONS OF 1903.

The following are the conventions and treaties which have been proclaimed during 1903:

March 3.—A convention between the United States and Great Britain regarding the settlement of the Alaskan boundary question.

April 3.—A supplementary treaty for extradition between the United States and Mexico.

April 30.—A renewal of the treaty of friendship between the United States and Spain.

April 30.—A treaty for extradition between the United States and Brazil.

July 11.—A convention defining the rights, privileges and immunities of Consular officers of the United States and Greece.

July 17.—A treaty for extradition between the United States and Guatemala.

TREATIES OF EXTRADITION.

Although at the present time the United States has regular treaties of extradition with about thirty nations only, the sentiment of international courtesy which usually prevails in such matters makes it difficult for a fugitive criminal to escape punishment, even in instances where such delivery could not be demanded on a treaty right.

Extraditable Crimes, How Interpreted.—The extraditable crimes are usually defined as follows:

Murder, comprehending assassination, parricide, infanticide and poisoning; attempt to commit murder; manslaughter, when voluntary.

Robbery, the act of feloniously and forcibly taking from the person of another money, goods, documents or other property by violence or putting him in fear.

Burglary, the act of breaking and entering into the house of another in the night time, with intent to commit a felony therein.

Larceny, the theft of effects, personal property, horses, cattle or live stock, or money, of the value of twenty-five dollars or more.

Forgery, the utterance of forged papers; the forgery or falsification of official acts of government, of public authorities or of courts of justice, or the utterance of the thing forged or falsified.

Counterfeiting, falsifying or altering money, whether coin or paper, or of instruments of debt created by national, State, provincial or municipal governments, or of coupons thereof, or of blank notes, or the utterance or circulation of the same; or the counterfeiting, falsifying or altering of seals of state, or the fraudulent use of same.

Embezzlement by public officers, embezzlement by persons hired or salaried, to the detriment of their employers.

Fraud or breach of trust by a bailee, banker, agent, factor, trustee or other person acting in a fiduciary capacity, or director or member or officer of any company.

Perjury; subornation of perjury.

Wilful and unlawful destruction or obstruction of railroads which endangers human life.

Crimes committed at sea: (a) Piracy, by statute or by the law of nations. (b) Revolt, or conspiracy to revolt, by two or more persons on board a ship on the high seas against the authority of the master. (c) Wrongfully sinking or destroying a vessel at sea, or attempting to do so. (d) Assaults on board a ship on the high seas with intent to do grievous bodily harm.

Crimes and offenses against the laws of both countries for the suppression of slavery and slave trading.

SUMMARY OF TREATIES.

In the following tables the various extradition treaties now in force are summarized. It is impossible to record all of the minute differences between the various treaties. Many of them are made to conform in part to the laws of the countries with which the treaties are perfected.

Extradition treaties between the United States and those countries which touch the frontiers, such as Mexico, are more rigid than those with more distant nations, and cover a greater number of offenses. Mexico is the only country in which the possession of counterfeiting tools is considered an extraditable offense. Counterfeiting is considered extraditable in all countries with which the United States has treaties. Murder or attempted murder are also considered grave enough to grant extradition in all the countries.

But three countries—Belgium, Mexico and the Netherlands—grant extradition for obtaining money by deceit. Ecuador and Great Britain are the only two in which crimes at sea are not extraditable. Burglary is a grave crime in all but five countries, and most countries include shop or office breaking.

An accurate general idea of the character of each convention of the United States with a foreign country in regard to extradition may be obtained from the following tabulations:

THE EXTRADITION OF CRIMINALS.

(Compiled for The American Almanac from "Treaties in Force, 1899," and subsequent treaties provided for this purpose by the State Department.)

Country.	Murder and Attempts.	Arson.	Robbery.	Burglary.[6]	Larceny.	Obtaining Money by Deceit.	Embezzlement.	Counterfeiting.	Having Counterfeiters' Tools.	Forgery.	Fraud. Trusts.

HERBERT N. CASSON,
Author of
"Organized Self-Help."

Of all the numerous economic problems that confront the American people none is more important or more difficult of solution than that presented by the trusts. It is a new problem. No ancient nation that ever existed, so far as we know, had to grapple with the question of commercial trusts in the form which they have assumed in the last few years in the United States. Even here the trust is a new thing, whether it be considered as a transient phenomenon or as an economic development. Up to the year 1898 the $200,000,000 corporation was unknown. Ten years ago a corporation capitalized at $10,000,000 would have been classed among the largest; to-day it would attract little attention.

Among the 400 largest corporations now existing only 42 were organized prior to 1890. The oldest, the Lehigh Coal & Navigation Company, capitalized at $32,000,000, was formed in 1822.

There is a vast difference, it must be remembered, between what is commonly known as a trust and a company or corporation. A corporation is a combination of individuals, while a trust is a combination of corporations. A trust does not promote trade by the stimulation of a healthy competition; it injures trade by restraining or destroying its competitors. It is the aim of the trust to control, to monopolize, to dictate to the public the prices at which goods shall be bought or sold.

By some a distinction is made between the "natural monopoly" and the commercial trust. By the former is meant such companies as the gas or water company of a city, and by the latter is meant the combination of several industrial corporations into one company for the purpose of destroying competition. It is difficult to draw a line and to say exactly where the corporation ends and where the trust begins, but the understanding generally is that it is the element of coercion and monopoly that puts the trust in a class by itself and renders it so obnoxious to the public.

The "criminal trust" is not the company that is formed to produce some new and useful commodity, to open up new railways, to dig new mines, or to exploit in any new manner the natural wealth of a country. It is not the company that is content to take its place among its competitors and obtain its fair share of trade by rendering to the public the greatest possible amount of service. It is, on the contrary, the company that conspires against the freedom of trade, that makes it impossible for its competitors to continue in business, and that finally obtains such a monopoly as to hold the public at its mercy with regard to the commodities in which it deals.

From the standpoint of the trust itself the reason for its organization is that a "community of interest" may exist between competing corporations. Competition is productive of waste and unnecessary expense. If consolidation has been found to be beneficial up to a certain point, why not carry it to its logical conclusion and organize the entire trade?

The total number of existing trusts is given by Congressman Charles E. Littlefield as 793, capitalized for the enormous sum of over fourteen billion dollars. The railroads are not included in this estimate, their capitalization being over twelve billion dollars. As the national wealth is little more than ninety billions, it will be seen that the trusts represent over one-quarter of our national wealth.

The largest of all trusts is the United States Steel Corporation, organized in 1901. This "Steel Trust," as it is generally called, is a combination of ten large corporations, each of which was itself a consolidation of several smaller companies. Its total capitalization is $1,404,000,000. Its net earnings in 1902 were $111,000,000. The number of its employes is over 100,000.

The plant of this gigantic trust, whose capitalization equals over one-half of the money of all kinds in the United States, consists of 149 steel works, with an annual capacity of 9,000,000 tons of finished material; 78 blast furnaces, with a capacity of 6,500,000 tons of pig iron; 18,000 coke furnaces, 71,000 acres of coal lands, 30,000 acres of land in the coke region, 70 per cent of the ore mines of the Lake Superior region, 125 large vessels on the great lakes, a number of short railway lines and buildings, and offices of various kinds in all parts of the world.

Strictly speaking, the United States Steel Corporation is not an operating company, but a holding company. Neither does it have a complete monopoly of the steel business, as about 40 per cent was done last year by independent companies.

Another immense consolidation, organized in 1902, is the International Mercantile Marine Company, otherwise known as the Ship Trust. Mr. J. P. Morgan was its organizer, and the different lines which he succeeded in bringing together were the White Star, the Red Star, the Leyland, the Atlantic Transport and the Dominion. The trust was a most ambitious effort to control the transatlantic traffic. The fleet of the Ship Trust numbers 123 vessels, with a gross tonnage of 1,034,884. The capital stock and bonds amounted to $170,000,000. During the first year of operation the net earnings were $6,107,675.

The plan of the trust was to so organize ocean traffic as to be able to run an express steamer from each continent every day. In a large measure the plan has failed of its purpose, as the Cunard line and the German and French lines refused to enter the consolidation. The five lines that were brought together have been acting with a large degree of independence since their organization by Mr. Morgan.

Perhaps the most important event of the year, with relation to trusts, has been the prosecution and dissolving of the Northern Securities Company, by order of President Roosevelt. This company was organized in 1901, with a capitalization of $400,000,000. It was a combination of two competing railroads—the Northern Pacific and the Great Northern. The market value of the stock of the two railroads in 1895 was $35,250,000, less than one-tenth of the amount of capitalization in 1901.

On February 20, 1903, Attorney-General Knox was instructed to begin proceedings against the Northern Securities Company, on the charge that it was an "unlawful combination and conspiracy." Suit was accordingly brought against it under the Sherman Anti-Trust law of 1897, and although the Northern Securities Company claimed to be only a security-holding company, it was declared to be unlawful and dissolved.

One feature that has been common to all trusts organized in the last two or three years is overcapitalization. To show the growth of this evil it is only necessary to state that the total capitalization of all companies organized during 1902 amounted to $3,700,000,000, and that those organized in 1901 exceeded this figure by $200 000,000. The creation of paper values has dangerously increased the speculative element in business. The increase of "undigested securities," as they have been called, has not tended to promote confidence or a sense of security among business men and financiers. It is plain that too much has been expected of consolidation in a number of instances.

During the past four years the capitalization of industrial consolidations amounted to $7,536,000,000, the largest flotations being in 1901 and 1903. Many of these have collapsed, and the securities of nearly all of them have depreciated. In fact, the trusts have demonstrated that there is a limit beyond which an organization cannot go in passing over from protection against excessive competition to attempted monopoly. It is stated on credible authority that "the actual market value of this prodigious product of the printing press is probably about 25 cents on the dollar."

The extent to which monopolistic combinations are being formed in almost all departments of business is alarming. Free competition and equal opportunities, in the old sense, are now rapidly disappearing.

Many corporations, formerly competitors, have formed pools or entered into "gentlemen's agreements," by which means they are enabled to keep prices above what they would be under the normal operation of the law of supply and demand.

The number of "chain stores" is giving considerable anxiety to wholesalers and retailers. Already one concern is operating 230 retail stores, and another owns 114. All manner of price-fixing agreements are being devised so that underselling shall be prevented.

It has been recently shown by the Civic Federation investigators that the boycott and the blacklist are largely used by many corporations. Business agents are employed to detect violations of the combination agreement.

"When production is too great to support the minimum price," says the Civic Federation Review, "the combinations sometimes place limits on the output, as when the whiskey pool limited production to 28 per cent of each plant's capacity and the Whiskey Trust closed sixty-eight of its eighty distilleries."

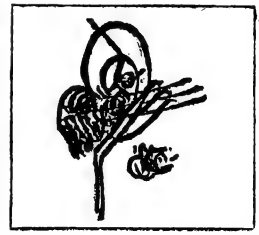
In short, so general has the tendency become to organize monopolistic combinations that no law has yet been framed which can deal adequately with the problem or give the public the protection which it does not at the present time possess. Anti-trust laws have been passed by twenty-nine States and by Congress. In 1889 North Carolina made the organization of trusts a crime, with a penalty of $10,000 fine and ten years' imprisonment.

The Sherman Anti-Trust law was passed by Congress in 1897 and forbids all "conspiracies in restraint of trade" under penalty of a fine of $5,000 and a year's imprisonment. By a number of well-known decisions this act has been held to be constitutional, yet it has not decreased the trust-organizing tendency to any appreciable degree.

The Littlefield Anti-Trust bill of 1903 was amended and tinkered for several weeks, and finally declared to be unconstitutional, and in its stead the Elkins Anti-Rebate bill was passed, which, even if strictly enforced, would deal with only one phase of the monopolistic tendency.

The newly created Department of Commerce may furnish the governmental machinery by means of which trusts may be either dissolved or compelled to render proper service to the public, but up to the present time it has accomplished nothing of importance.

The Coal Trust is in reality a railroad trust. The Reading Company, Lehigh Valley, Central of New Jersey, Delaware, Lackawanna & Western, Erie and New York, Susquehanna & Western railroad companies compose it. Allied with these six companies are the Delaware & Hudson, Pennsylvania and New York, Ontario & Western. These companies own or control by stock ownership 97 per cent of the entire anthracite coal fields of Pennsylvania. They provide the only means of transportation from the coal fields. The Reading, Central of New Jersey and Lehigh Valley together control 67 per cent of the anthracite coal fields. The Reading owns the majority of the stock of the Central of New Jersey. The Erie owns the New York, Susquehanna & Western, J. P. Morgan, as trustee, votes the stock of the Reading and Erie. The annual productive capacity of the anthracite coal field is 60,000,000 tons. The control of the amount of output, the freight rate and the price to the consumer of this great necessary of life is thus centralized. The actual result of this combination to the consuming public has been an increase in the average price of tidewater coal from $3.12 a ton in 1895 to $5 a ton in 1903, or over $100,000,000 a year.



It was the New York American that brought to light the fact that the Coal Trust compact was something more than a "gentlemen's agreement" when it exposed the organization and inner working of the Temple Iron Company, under which title the "six companies" are banded together by written agreements jointly guaranteeing, in proportions corresponding to their coal tonnage, the Temple Iron Company's stock and bonds, which are issued for the purchase of troublesome independents. The effectiveness of the trust organization is made complete by a series of identical contracts called "coal purchase contracts," whereby, under a cleverly devised verbiage, the control of the output of independent mines for all future time is turned over to the trust in consideration of preferential freight rates.

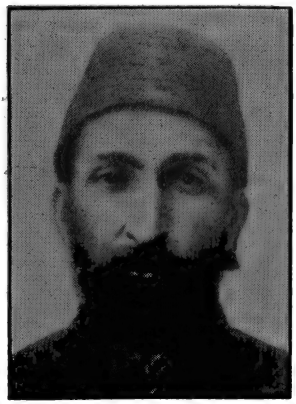
During the past year a bitter and persistent warfare in the courts has been waged by William Randolph Hearst, and at present the trust is battling for its continued existence in three forums: Before the Interstate Commerce Commission, the Attorney-General of the State of New York and the Attorney-General of the United States. The case before the Attorney-General of the United States has been hung up for months, but those before the Interstate Commerce Commission and Attorney-General Cunneen are being pressed to a conclusion.

Turkey.

—

Capital:
CONSTANTINOPLE.

The earliest historical mention of the Turks was somewhat prior to 850 A. D., but the position they occupied was of little prominence until about 1030 A. D., when the Othman Turks, founders of the present dynasty, took possession of considerable Asiatic territory. By the beginning of the fourteenth century they had made themselves masters over many more provinces, and, having captured Nicea, had established their capital at Broussa. In 1080 they made their first appearance in Europe, at which time some 2,000 of their best warriors crossed the Bosphorus to assist Emperor Botoniates in one of the petty wars which were of such frequent occurrence at that time. Before the end of the century, however, their name was known throughout the world, for they had reduced such countries as Bulgaria, Macedonia and Thessaly to subjection, and had become rulers over all Asia. In 1892 they turned their attention to Europe, and in 1453 captured Constantinople, which has since been their capital. From that day their power was extended with rapidity until it threatened to spread from one end of Europe to the other, but in 1525 Solyman I. suffered his first serious defeat, and ever since the glory of the empire has waned. Step by step they were driven out of their European territories. Upper Hungary and Transylvania were abandoned as early as 1595. In 1769 they were expelled from the Crimea, and in 1806 the Russian frontier was still further extended. The success of the Greek war for independence cost them that country, but the greatest blow to Turkish power was the war of 1876, which resulted in the loss of Bulgaria, Thessaly, Eastern Roumelia and a strip of Armenia, as well as the entire independence of Roumania, Servia and Montenegro, and the loss of administration over Bosnia, Herzegovina and Cyprus.



Abdul-Hamid II., who was born 15 Shaban, 1245 (September 22, 1842), is the thirty-fourth sovereign of the House of Othman. On the deposition of his

brother, Sultan Murad V., who was said to be suffering from idiocy, he succeeded to the throne August 31, 1876.

It is not the custom for the Sultans of Turkey to contract regular marriages. The harem is a State institution, and all children born within its walls are considered legitimate, whether the offspring of free women or of slaves. By the law of succession, which has long been established in Turkey, however, the throne does not descend to the eldest son of the Sultan, but to the senior male descendant of the first Othman, so that while the present ruler has several sons, no one of them can inherit the throne if they have uncles or cousins of greater age.

The present heir apparent, therefore, is Prince Mehemmed-Rechad Effendi, who was born November 3, 1844. He has three children—Prince Zia-Eddine, born 1876; Prince Nedjm, born 1881, and Princess Reji'a, born 1887.

The Ministry. — Grand Vizier, Said Pacha; Cheikh-ul-Islam, Mehmed Djemal-Eddin Effendi; Minister of State, Justice and Religion, Abdourrahman Pacha; Minister of Marine, Hassan Pacha; Minister of War, Riza Pacha; Minister of Foreign Affairs, Tevfik Pacha; Minister of the Interior, Memdouh Pacha; Minister of Finances, Rechad Pacha; Minister of Evkafs (pious foundations), Galib Pacha; Minister of Public Works and Commerce, Zihni Pacha.

Sultan of Turkey.

The Nation.—The Sultan of Turkey is the absolute ruler of the Ottoman Empire, in so far as his word is not in opposition to the precepts of the Koran. The legislative and executive rest in the Sultan, and are vested under him in the Grand Vizier and the Cheikh-ul-Islam, the head of the church.

Mohammedanism is the religion of the empire, and its adherents far outnumber all others. Seven other religions are given official recognition.

The budget (1898) shows a revenue of $81,893,462 and an expenditure of $81,153,341. The public debt at that time was $726,511,195.

Agriculture is little practiced in Turkey. Coffee, opium, gums and madder are exported. Silk, wine, perfume, brass and copper ware, tapestry, chrome pigment and rare minerals are important products. The fisheries and pearl fisheries are valuable.

The Dependencies.—The principality of Bulgaria is one of the tributary States to the Ottoman Empire. It was created in 1878 by the Treaty of Berlin. By this document it is given a Christian government and a national militia. The legislative power is vested in the Sobranje, or one-chambered National Assembly, the members of which are elected by universal male suffrage and hold for five years.

The island of Crete is an autonomous State, subject to the suzerainty of the Porte, but not to tribute. It is under a High Commissioner of the Powers. Its Bule, or Assembly, consists of sixty-four deputies, elected every two years. Questions of foreign relations are determined by the representatives of the four Powers at Rome.

Samos is an island off the coast of Asia Minor, forming a principality under the sovereignty of Turkey, and under the guarantee of Russia, France and Great Britain of December 2, 1832.

The Turkish provinces, especially those in Asia, are rich in minerals which are but little worked. Chrome is found in Kutaia, silver and lead ore in the Cilician Taurus and in Sivas, manganese ore at Salonica, zinc at Karasu on the Black Sea. Among other ores and minerals found in abundance are antimony, copper, borax, meerschaum, argentiferous pyrites, emery, asphalt, coal and lignite. The fisheries are important. The coast of the Mediterranean produces excellent sponges, the Red Sea mother-of-pearl and the Persian Gulf pearls. The fisheries of the Bosphorus alone represent a value of more than $1,250,000.

The whole of the Turkish Empire is divided into thirty vilayets, or governments, and sub-divided into sanjaks, or provinces, kazas, or districts, nahies, or sub-districts, and karies, or communities. A Governor-General, who is held to represent the Sultan, is placed at the head of each vilayet, and the provinces, districts, etc., are under inferior authorities. All subjects may fill the highest offices in the State, no matter what their birth may be. Foreigners residing in Turkey are under the laws of their own country, and are amenable for trial, in cases in which Turkish subjects are not concerned, to a tribunal presided over by their own consul. Foreigners who own real property are amenable to the Ottoman civil courts in questions relative to their landed property. Cases between foreign and Turkish subjects are tried in Turkish courts, a dragoman of the foreign consulate being present to see that the trial is carried on according to law. The carrying out of sentence, if it be against the foreigner, is done through his consulate. Cases between two foreign subjects of different nationalities are tried in the court of the defendant.

Since the Summer of 1888 Turkey has been in direct railway communication with the rest of Europe, the main lines starting from Constantinople and Salonica. German railways are building from Konia to Mosul, Bagdad and Basrah. There are about 24,000 miles of telegraph in Turkey and about 750 telegraph offices.

Events in 1903.—The "Sick Man of Europe" had a relapse, and a plethora of doctors failed to effect a cure. Insurrections by Bulgarians, revolts by Albanians and Macedonians, foreign warships in Turkish harbors, protests from the Powers, threats of war, uncertainty of finances, a thousand ills kept the country in turmoil and disturbed the peace of Europe and the minds of writers through the entire year. At the beginning of the year, in January, the Sultan ordered the mobilization of an army of 240,000 men for a demonstration in Macedonian territory, especially at Adrianople and Monastir. In February Russia and Austria jointly agreed upon a firm note to be sent to the Sultan demanding a withdrawal of the troops and insisting upon administrative and financial reforms in Macedonia. On February 19 the reforms asked for were not calculated to cause irritation, and on February 23 Turkey accepted the conditions and announced the formal support of Great Britain and Italy to the scheme, which called for the organization of a gendarmerie under the direction of European officers, the incorporation of a proportionate part of the Christian population in its ranks, prompt trials for those arrested for common crimes and respect for the laws of the Albanians.

The forerunner of this protest and the demand for the reforms was the beginning of a revolution in Macedonia which smoldered at first, but burst into flame in the Spring. In January some Bashi-Bazouks and regulars released from service began a sort of foray on their own account among the Christian villages, pretending to seek for arms, and killing and pillaging when none were found. This aroused the Macedonians, who retaliated, only too ready to offer opposition to anything Turkish. The chiefs of the

TURKISH TRIBUTARY STATES.

The condition of the tributary states is estimated as follows:

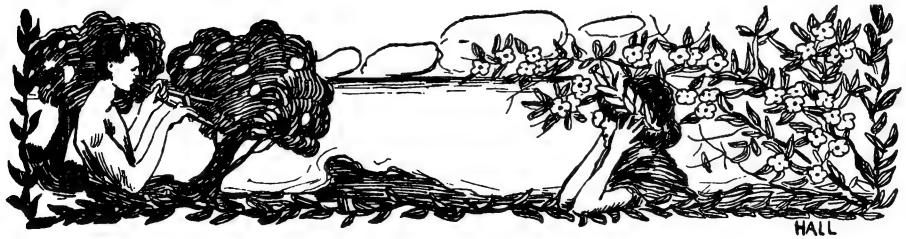
Tributary States.	Area, Sq. M.	Population.	Revenues.	Expenditures.	Imports.	Exports.
Bulgaria	38,080	3,744,283*	$19,603,580†	$19,736,574†	$18,008,816‡	$16,553,952†
Crete	3,326	303,543*	1,252,639§	1,398,851§	2,889,669‡	1,457,096‡
Egypt	400,000	9,734,405‖	55,000,000†	54,875,000†	97,969,770*†	97,257,300*†
Samos	180	54,830*	176,934‡	176,934‡	1,065,000*	1,055,000*

*1900. †1903. ‡1901. §1901-2. ‖1897. *†Both merchandise and specie in 1902.

In Turkey all Mussulmans of over twenty years are subject to military duty, and this liability continues for twenty years. Non-Mohammedans are not liable, but must pay an exemption tax, levied on males of all ages. Nomad Arabs, though liable, furnish no recruits, and many nomad Kurds evade service. The whole empire is divided into seven army districts, with as many army corps. The infantry is generally armed with Mauser rifles. The field artillery has been recently reorganized on a plan sanctioned in 1891. The crews for the navy are raised partly by conscription and partly by volunteer enlistment.

Macedonian revolutionary movement in Bulgaria seized the opportunity to start anew the patriotic fervor of the people, and on January 12 it was announced that a general uprising of the Macedonians would occur on April 1.

In the meantime a revolt broke out in north Albania against the reform demands of the Powers. On March 29 it had assumed serious proportions. Turkish troops were rushed to the country, and almost daily engagements were held between the regulars and the revolutionists. The Bulgarian inhabitants of more than thirty villages joined issue against the soldiers, and on April 2 the first heavy battle was fought, in which more than 1,000 men were killed or wounded. It was claimed that the Albanian uprising was due largely to the desire of Don Juan Kastorioti, who wished to set up a monarchy with himself as monarch. A peace commission was sent out by the Sultan to treat with the Albanians, but on April 17 the commission was seized and practically made prisoners. On May 15 the insurgents crossed the Turkish frontier, and on the 16th Turkish soldiers occupied Albanian towns. On May 25 about fifty Albanian chiefs were exiled to Asia Minor, and the rebellion in that territory was considered at an end. In spite of this, however, there was fighting in the hills during the entire Summer.



The insurrection of the Bulgarians was planned with greater care than was that of the Albanians. In May an attempt was made to blow up the city of Salonica, following the destruction of the Ottoman Bank by dynamite on April 29. The principal quarters of the town had been undermined and quantities of dynamite and nitro-glycerine were found. The most severe measures were at once adopted against those suspected of taking part in the outrage. About 300 persons were killed by soldiers and by bombs and more than 1,000 arrested as being implicated in the insurrection. The Bulgarian Government was blamed and for a time war was imminent between Bulgaria and Turkey. To prevent damage to foreign property two Austrian battleships and an Austrian torpedo boat arrived at Salonica on May 2. Eight Italian warships were ordered to proceed to the city on May 4 to augment the Austrian demonstration. The Bulgarian insurrection was carried on with massacres of Mussulmans, and horrible atrocities were reported.

In February reports began to come of the organization of armed bands of Macedonians, and on March 2 came the news of a clash between Macedonians and Bulgarians on one hand and Turkish soldiers on the other. This was a signal for the general uprising to begin, and from the 1st of March through the Spring and Summer there was serious fighting. The revolutionary authorities were accused of murders by the score, of ordering massacres and of insisting upon the most brutal sort of warfare. The Turkish soldiers were not behind in carrying on the kind of fighting for which they have gained a reputation in previous revolutions. Villages were burned, innocent peasants were murdered and women and children dragged from their homes. In June it was reported that the Macedonians had arranged to use plague bacilli as weapons in their fight for freedom. In August began a war for the annihilation of the Macedonians. Turkish soldiers were given free rein to kill and burn, to wipe out whole villages and decimate even entire provinces. On August 24 a general massacre of Bulgarians in the vilayet of Monastir was reported, and on the next day an even greater massacre was reported from Adrianople. All Macedonia became aroused, and on September 1 the Macedonian Revolutionist Committee made its long-deferred announcement of a general insurrection. In the vilayet of Monastir it was estimated that between 20,000 and 30,000 Bulgarian men, women and children had been killed by Turkish troops.

The United States became directly interested in the situation in August, when a cablegram was received announcing the assassination of United States Vice-Consul and Deputy-Consul William C. Magelssen at Beirut, Syria. Without delay messages were sent to United States Minister Leishman at Constantinople directing him to use the most vigorous measures to impress the Sultan with the gravity of the case. At the same time Admiral Cotton's fleet, then at Nice, was directed to proceed at once to Beirut. On the next day, however, news came that the report of the assassination was false and that the Vice-Consul, although fired upon, had not been injured. The Turkish Government claimed that the shot had been fired by one of a wedding party, merely as a salute to the bride and groom, and that no harm was intended to the United States representative. Some arrests were made and the matter settled.

The Russian Consul at Mitrovitza, M. Stcherbina, was shot and killed by an Albanian sentry early in April. Russia demanded satisfaction from Turkey to the extent of paying a large sum of money and erecting a memorial chapel to the dead official. Diplomatic relations were severed until August 27, when full satisfaction was given.

On April 13 an agreement was concluded whereby Great Britain, France and Germany were to participate equally in the control of the proposed Bagdad railway, the revenues of which were to be guaranteed by Turkish customs. The road is to run from Konia to Bagdad, with branches to Aleppo, Urfa and the Gulf of Alexandretta. Concessions for the line were obtained by Germans. England withdrew from the agreement April 23, not satisfied with the security offered.

Uruguay.

—

Capital:
MONTEVIDEO.

The first European to land on the shores of Uruguay was Don Dias de Salis, a Spaniard, who made his first visit in 1503. On his second, in 1516, he was murdered by the natives. Two or three other attempts at exploration were made, but met with fierce and determined resistance from the savages, who resisted desperately every advance of the strangers. In 1522 Sebastian Cabot caused a fort to be constructed in the country east of the River Uruguay, which was held until 1580, when it was abandoned by its garrison. The Spanish conquerors renewed from time to time their efforts to gain a foothold in the rich regions east of the Uruguay, but the opposition of the natives was so fierce and so successful that little or no progress was made for a long time. It was not until 1624 that the first of the present centres of population was founded. This settlement was made about two leagues from the mouth of the Rio Negro and was called Santo Domingo de Sariano. The country remained in the hands of Spain until 1810, when the people, encouraged by a successful resistance of attacks by the British in the preceding four or five years, repudiated the authority of the Spanish viceroy and chose a council to which they intrusted the conduct of public affairs, and this step was the beginning of the struggle which ended with the extinction of Spanish dominion in South America. A revolutionary party was formed under the lead of Jose C. Artigas, which finally succeeded in expelling the Spaniards from the country, and a confederation of the provinces of Uruguay was formed. Attacked by Portugal and Brazil, however, the political situation was for a number of years in an unsettled condition. A long period of internal strife followed, and there was a continued succession of revolutions, dictatorships, assassinations and insurrections until 1876, since when the country has enjoyed comparative quiet. The Presidents of later years have exhibited wisdom in government under difficult circumstances, and a patriotic ambition to advance their country's welfare rather than their personal interests, and as the nation emerges from the cloud which a great financial storm had gathered over it it can look to a future bright with prosperity and find in its promise the courage that is equal to the demands of modern civilization and the energy that shall not falter in the work of building up a great republic on the banks of the Uruguay.

President Ordonez.

The President. — The President of Uruguay is Senor Jose Batle y Ordonez, who was elected February 28, 1903.

The Cabinet.—The President is assisted by a Cabinet of Ministers which is constituted as follows: Minister of Foreign Affairs and of Worship, Dr. German Roosen; Minister of Finance, Senor Diego Pons; Minister of Agriculture, Industry, Public Instruction and Public Work, Senor Luis Varela; Minister of War and Marine, Senor Pedro Callordax. The Department of the Interior and Justice is vacant, and the functions of the office are being performed by the Minister of War.

The Nation. — Uruguay possesses a republican form of government, its powers being vested in three branches—the executive, the legislative and the judicial. The executive power is exercised by the President, who is elected for a term of four years; the legislative power vests in a Congress of two Houses—the Senate and the Chamber of Representatives. The Senate is composed of nineteen members, one for each department, and they are selected by electors who are chosen by the direct vote of the people. Senators are chosen for a term of six years. The Chamber of Representatives consists of sixty-nine members, who are elected for three years, in the proportion of one to every three thousand male adults who can read and write.

Although the Roman Catholic Church has been designated as the established church, other religious faiths are tolerated. Primary education is compulsory. By the figures of 1901 there were 605 public elementary schools, with 1,161 teachers and nearly 50,000 pupils, while the number of private schools is so large that it has been estimated that there was one school, either public or private, for each 850 inhabitants. In spite of this, however, in 1900 more than 50 per cent of the population over six years of age (outside of the capital) could neither read nor write.

Nature has been lavish of her favors to Uruguay. On her fertile plains is the pasture for the vast herds which now constitute the chief national wealth; in her valleys and on her hills are mingled the vegetation of the tropics and of the temperate zones, while in her mountains are great stores of mineral wealth. In 1900 the land devoted to pasturage was more than 37,000,000 acres, while, according to the declarations of the owners, in 1901 there were 6,326,601 head of cattle, 575,361 horses and 17,624,548 sheep, besides many mules, pigs and goats in the various departments of the republic. During 1902 more than 800,000 cattle were slaughtered, and the wool clip in 1900 amounted to nearly 33,000 metric tons. Several of the departments are extremely rich agriculturally, there being nearly 22,000 farmers in the republic. Wheat is largely grown, while maize, barley, millet, rye, oats and flaxseed constitute a large proportion of the farm crops. Tobacco and olives are now being cultivated to quite a large extent, while the vineyards of Montevideo, Canelones, Salto and Rio Negro contain nearly 12,000,000 vines. The minerals in Uruguay are chiefly to be found in the northern departments, where several gold mines are being worked, and silver, copper, lignite, coal, magnesium and lead are being mined in paying quantities. The report of the special trade of 1901 shows imports of $23,691,982 and exports to the amount of $27,731,126.

Although there is no authoritative statement of the revenue and expenditures of the country, the following is the estimate for 1901-02: Revenue, $16,160,000; expenditure, $16,160,996.

Events in 1903.—In March the "Blancos," who have long been a disturbing element in Uruguay politics, rebelled against the new President, Batle y Ordonez, and the appointment of departmental prefects and started a revolution. The trouble was confined to three departments and did not threaten the capital. Several engagements were held between the rebels and the government troops. The English railroad was destroyed, and it was reported that the revenue offices had been seized on March 17 by mutinous national guardsmen. On March 22 an agreement was reached and articles of peace signed by the rebels and the government. It was agreed that new prefects would be appointed in six departments to please the "Blancos."

President Batle y Ordonez was elected on March 1 as a compromise. The two candidates before the Congress, which elects the President in Uruguay, were Maceachen, a "Red," and Carlos Blanco, a "White," or "Blanco." Congress was able to come to no agreement, and the name of Jose Batle y Ordonez was offered and accepted by all of the "Reds" and a part of their opponents.

Serious difficulties arose between Italy and Uruguay in January over a clash which occurred between the authorities and Captain Balestrini, of the Italian bark Maria Madre. The bark had been chartered by a German firm for the conveying of a quantity of hides, but for some reason the vessel did not sail after the cargo had been loaded. The matter was taken to the courts by the Germans and an embargo was laid upon the bark. The captain attempted to prevent the seizing of his vessel by covering the decks with the Italian flag, but the Uruguay officials managed to get aboard and ordered the

Italian officers and crew ashore. The Italian Government, through its consul, took up the matter, claiming that Uruguay had exceeded her rights, and for a time an Italian naval demonstration was threatened. The matter was finally adjusted, however.

Utah.

Capital:
SALT LAKE CITY.

Utah has an area of 84,928 square miles, and by the census of 1900 had a population of 276,749. Utah was acquired by the United States by the treaty of Guadelupe Hidalgo in 1848, when several of the Western States were given up by Mexico. In 1850 it was organized as a Territory, and at that time comprised all of the country lying between the eastern boundary of California and the great plains. The creation of the Territories of Nevada, Colorado and Wyoming reduced it to its present dimensions. In 1847 the Mormons, under the leadership of Brigham Young, began to make settlements in Salt Lake Valley, and rapidly extended themselves over the fertile region of the Territory, forming communities with governments administered from the central head of the church. Prior to the advent of railroads very few Gentiles entered the country, but with the ease of transportation afforded by the great railroad lines from the East many immigrants came into Utah and rapidly increased the population in spite of the efforts of the Mormons to keep the country for themselves. January 4, 1896, Utah was admitted as a State, a constitution having been formed acceptable to Congress. Previous to this time statutes had been passed forbidding the practice of polygamy, but countless controversies have arisen since then between the United States Government and the Mormons as to the moral status of their faith.

Utah is primarily an agricultural and mining State, though in recent years manufacturing has received a stimulus and now has a large share in the wealth of the region. The smelting and refining of lead ore is the principal industry, the lead mined being 13 per cent of the total production in the United States. The manufacture of salt from the concentrated brine of the great Salt Lake also ranks high in the scale of important industries. Dependent upon agriculture and horticulture are flour and grist milling, the canning of fruits and vegetables, and the manufacture of butter, cheese and condensed milk. Silver, as a by-product of lead refining, is of greater value in the State than is the lead.

Gov. Heber M. Wells.

Events in 1903.—The most important acts of the State Legislature were the passage of an irrigation bill, providing for the construction of an irrigation system, and the adoption of laws for the protection of birds and animals. A commission was appointed to negotiate with the Legislature of Arizona for the annexation to Utah of that part of Arizona lying north of the Colorado River. Owing to the prevalence of a grasshopper pest, county boards were authorized to offer a bounty of one cent a pound for grasshoppers, the State to pay two-thirds and the county one-third. It was made unlawful to store in the underground workings of any mine employing more than ten men more than enough powder to last twenty-four hours. A rigid "pure food law" was enacted. The use of the American flag for advertising purposes or its disfigurement in any way was forbidden in another statute. A State Board of Sheep Commissioners and the office of inspector with deputies were created to enforce new and stringent regulations to eradicate scab and other diseases from sheep. Permanent insanity was added to the grounds for divorce. A mandatory free text-book law applying to all school districts in the State was passed. School boards in districts having a population of 2,000 or more were ordered to establish free kindergartens. A commission of five members was created to work toward securing the expenditure of Government funds for irrigation purposes within the State. The State banking law was amended to permit the establishment of banks of not less than $10,000 capital in cities or towns having less than 3,500 inhabitants. Teachers afflicted with a serious infectious or hereditary disease were forbidden employment in the public schools. A State curfew law was enacted, making it unlawful for any child under fourteen years of age to be in any public place after nine o'clock in the evening, unless accompanied by parent or guardian. Provisions were made for the care of dependent, neglected or ill-treated children. A system of State highways was created. It was made a misdemeanor for any person under eighteen years of age to buy, accept or have in his possession any cigar, cigarette or tobacco or narcotic in any form. A State barber board was created to examine and license applicants desiring to practice the barber trade. The labelling of all high explosives was required, showing the name and place of business of the manufacturer, date of manufacture and percentage of nitro-glycerine or other high explosive contained.

On January 20 Apostle Reed Smoot, of the Mormon Church, was elected to the United States Senate by a vote of 46 to 17. A protest was raised at once from all parts of the country against seating the Senator-elect on the ground that he countenanced polygamy. Church, religious and reform organizations and prominent individuals were insistent in their attempts to prevent the election in the first place, and to nullify it in the second.

A large delegation of Boers purchased a tract of several thousand acres near Ogden in February for colonization purposes. Attempts to build a cut-off across the Great Salt Lake for the Southern Pacific have cost the railroad company more than $1,000,000. The track was laid across the lake on great spiles, which appeared to be set in solid earth, but at the first trial the weight of a single locomotive caused the track to sink about half a mile from shore. At one point six forty-foot steel spiles were driven on top of each other, and the entire 240 feet of steel disappeared through the bed of the lake and could not be found. One hundred carloads of stone were dumped into the hole and ten minutes later could not be located with a forty-foot pole. During the Summer it was found that the lake had fallen two feet and six inches below its normal level in spite of the unprecedented rainfall.

Venezuela.

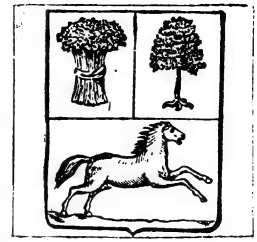
—

Capital:
CARACAS.

The coast of Venezuela was the first part of the mainland of America to be sighted by Columbus, who, during his third voyage, in 1498, entered the Gulf of Paria and sailed along the coast of the delta of the Orinoco. During the following year a great part of the coast was traced by Spanish navigators, and by 1550 colonization had been carried so far that the territory was made a captain-generalcy. Venezuela remained under Spanish rule until 1820, when the province achieved independence, for which she had been fighting for ten years. In the war for independence the leader of the Venezuelan troops was Bolivar, the ablest general South America has ever produced. In 1821 Venezuela formed part of the Federal State of Colombia, which embraced the present republics of Colombia and Ecuador, but in 1829 she became a separate government. In 1845 Spain finally recognized the independence of the country. In 1846 began the first of the succession of internal wars which have disturbed the equanimity of the state ever since. Early in 1901 there were several spasmodic revolts against President Castro's Government, which became more determined and more coherent as the year advanced, until by the beginning of 1902 civil war of the deadliest kind was in progress. About the same time trouble occurred along the Colombian border, but was averted in this direction partly by the intervention of the United States. In October, 1902, the Government made a determined stand against the rebels and succeeded in subduing them for a time.

The President. — General Cipriano Castro.

The Ministry.—Secretary of Foreign Affairs, Alejandro Urbaneja; Secretary of Interior, Dr. Lucio Baldo; Secretary of Treasury, Jose C. de Castro; Secretary of War and Navy, General J. M. Garcia Gomez; Secretary of Agriculture, General Jose T. Arria; Secretary of Public Works, General C. Castillo Chapellin; Secretary of Public Instruction, Dr. Blanco.



The Government.—The Chief Executive of Venezuela is a President, who is assisted by a Cabinet and a Federal Council. The President is chosen by the Federal Council from among its members, who are, in turn, chosen by Congress every two years. Neither the President nor the members of the Federal Council can be re-elected for the following term. According to a decision of Congress, President Castro will hold office for six years from February 20, 1902.

Legislative power is vested in a Congress, which consists of a Senate and a House of Representatives. The members of the Senate are chosen for four years by the Legislatures of the several States, and members of the House of Representatives are elected for a like term by the direct vote of the people.

The States of the Republic have their own Legislatures and executives and their judicial officers. The Government of the country is modelled much after that of the United States. Until 1881 Venezuela was divided into twenty-one States, but in that year a re-division was made into eight large States, each sub-divided into sections, or districts. Besides these there are several Territories.

The Nation.—Venezuela has an area of 593,943 square miles, and by a census made in 1891 had a population of 2,323,527. These figures include the territory awarded to Great Britain.

Although Roman Catholic is the State religion all creeds are tolerated, but are not permitted any external manifestations. Education was made free and compulsory in 1870. There are about 1,450 Federal and 150 State schools. For higher education there are two universities, twenty-two federal colleges, eleven national schools for girls, one polytechnic school, twenty-six private colleges, four normal schools, nine barrack schools, one nautical school and one school of arts and trades. In Caracas there is a national library.

Agriculture, stock raising and the exportation of tropical fruits and nuts are the principal industries of the republic. Sugar-cane, coffee, cereals, cocoa, etc., are grown abundantly. The staple product is coffee, which goes mainly to France, the United States and Germany. The area under coffee is estimated at from 180,000 to 200,000 acres. Beef and hides, especially the latter, are exported in large quantities, as also are rubber and skins.

Gold is found in large quantities in several of the districts, and there are silver mines in the States of Bermudez, Lara and Los Andes. Copper, silver and iron are abundant, and sulphur, coal, lead, asphalt, kaolin and tin are found. The iron mines at Imataca, on the Lower Orinoco, are in the hands of Americans. Petroleum is found in Tachira, but is not exploited. The great asphalt lakes also lie practically unused for lack of capital.

No manufacturing of consequence is carried on in the republic.

Events in 1903.—The opening of the year saw Venezuela with her ports blockaded by great warships, her country overrun with rebels, and her State buildings filled with claimants clamoring for money, which Venezuela wished very much she possessed to pay. It was only a peaceful blockade, although now and then a few shells were sent against some defenseless village, or a small sailing boat was held up by a cruiser and made a prize of war—but there was no war. German, Italian and English bugles answered each other from the decks of the ships; on the street corners in Caracas one saw posters warning the people against the purchase of German or English goods. United States Minister Bowen looked to The Hague for a settlement of the difficulties, and President Castro looked with him. On January 8 President Castro made a positive statement that he would trust his country's affairs to the International Tribunal. On the 16th he opened the Colombian frontier, and so dodged the blockade. On January 17 the Germans became tired of waiting, and the cruisers Panther, Vineta and Falke were sent to shell Fort San Carlos, which commands the entrance to Lake Maracaibo. On the 23d the bombardment ceased. About twenty-five were killed in the fort and many injured. The Germans claimed that the fort had fired first, and all the blame was laid upon Venezuela. Venezuela denied this, accusing the Germans of insolent aggression.

President Castro.

On the acceptance of The Hague tribunal as a court of arbitration, Minister Bowen requested that the blockade be raised at once, but the allied Powers showed a disinclination to change their attitude without some guarantee that the finding of the court would be obeyed by Venezuela. The Powers seemed unable to agree upon the terms of a joint protocol. Great Britain and Italy were able to agree, but Germany, in her protocol, made demands for concessions which Minister Bowen felt obliged to refuse. Germany wished the payment of $340,000 cash as a condition precedent to the raising of the blockade. On February 11 the demand was agreed to, however. Germany was to be allowed the amount of her demand, Italy and Great Britain $27,500 each. On February 13 the protocols were signed by all the Powers interested. Orders were sent at once for raising the blockade. On the 14th the warships were withdrawn. Caracas went wild with joy, and her demonstrations were directed toward the United States and Minister Bowen.

The only things left for a complete settlement of the difficulties were the signing of The Hague protocols, the selection of arbitrators, the return of the Venezuelan ships seized by the Powers and the satisfying of the five other claimants. On February 17 a protocol between the United States and Venezuela was signed, providing for an adjustment of

the United States claims by a commission to meet at Caracas. Queen Wilhelmina of Holland was selected as umpire in case of a disagreement in the commission. France and Venezuela signed their protocol on February 18, and the Queen of Holland was suggested in this, as in the United States protocol, as the one to name an umpire. The claims of Mexico, Belgium, Holland, Sweden and Denmark were to be settled by the same means. During the Spring and Summer the tangle was slowly straightened, though not without threats from the Powers, who seemed to wish more than their protocols had demanded; and the diplomatic conferences grew warm at times and promised to reopen the entire question. The Czar of Russia was called upon to name the members of the Court of Arbitration, and in August he selected M. Mouravieff, Dr. Lardy and Professor Matzen. Dr. Lardy and Professor Matzen refused to serve, and the selection of two names to take their places was postponed for two months.

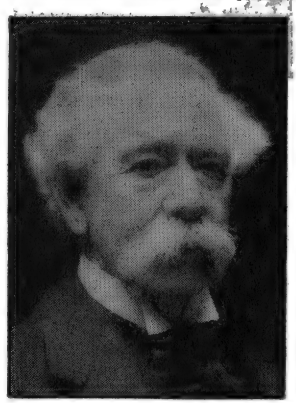
The last of the Venezuelan warships seized by the Powers was returned on March 4. The Hague protocols were finally signed on May 7, in Washington.

The civil war which had been carried on with more or less violence during the Spring and Summer ended on July 26, with the surrender of General Antonio Ramos, one of the last chiefs of the revolution to remain in the field. Early in September the country was at peace, for the first time since General Castro became President, four years before. October 28, the anniversary of the birth of Simon Bolivar, was set as the date for the formal announcement of peace.

A decree was issued by the government at Caracas on May 23 defining the rights of foreigners in Venezuela. Foreigners shall enjoy all the rights of Venezuelans, except that they must not form part of political societies, edit political newspapers or write about affairs of government, publish their office or employment, take arms in domestic contentions of the Republic or deliver speeches which in any way relate to the politics of the country.

On June 15 the Federal Court announced the settlement of a claim against the government held by Martinez & Debrio Brothers, of Mexico, who brought action against Venezuela in 1869 to recover on a loan made by Mexico to Colombia in 1826, when that country was composed of Venezuela and Ecuador. The decision granted the Mexican firm the principal of the loan, but not the interest.

In May a decree was issued providing for the coinage of 4,000,000 bolivars in silver, to be made at the mint at Philadelphia. A decree was issued the same month closing the custom houses of La Vela de Coro, Guanta, Puerto Sucre, Guiria, Dano Colorado and Cuidad Bolivar.



Vermont.

—

Capital:
MONTPELIER.

Vermont has an area of 9,653 square miles, and by the census of 1900 had a population of 343,641. Vermont was first visited by Europeans in 1609, when Champlain explored the lake since known by his name. During the next century the lake and its borders were a thoroughfare for various military expeditions in the Indian and colonial wars, and several forts and military posts were built. The first permanent settlement was made in 1724 at Fort Dummer, in the limits of Brattleboro. Both New York and New Hampshire claimed jurisdiction over the territory under royal grants. By 1763 New Hampshire had chartered 138 townships west of the Connecticut, and between 1765 and 1776 New York had issued grants of land covering 2,418,700 acres, often embracing the same territory as that granted by New Hampshire. The claims of New York were resisted by the settlers, and often open conflicts took place. In 1776 Vermont sought admission to the Provincial Congress, but was refused. In January, 1777, the Territory proclaimed independence, framed a State Constitution and again applied for admission into the Confederacy of Colonies, but was refused as before. In 1780 British generals made overtures to the little republic, but with no result save a diplomatic intercourse continued for three years, which was so managed as to gain time and save the section from invasion. In 1782 another attempt was made to gain admission to Congress, with a result like that of the other two attempts. In March, 1791, however, Vermont was admitted to the Union as the fourteenth State.

Gov. John G. McCullough.

During the Revolution, and especially during the early part of the conflict, Vermont played an important part in the affairs of the colonies. In May, 1775, the "Green Mountain Boys," under Ethan Allen and Seth Warren, captured Ticonderoga and Crown Point, and the battle of Bennington, in 1777, was won by the combined forces of Vermont and New Hampshire. It has recently been claimed that the battle of Bennington was fought on New York soil. During the Civil War Vermont contributed 33,288 troops to the Federal army and navy.

During the last decade there has been a large increase in manufacturing in Vermont, far out of proportion to the increase in population. The manufacturing interests are largely dependent upon the natural resources of the State—the forests, quarries and grazing land. The manufacture of lumber and timber products ranks first, and connected with the lumber trade is the manufacture of wood pulp. Extensive granite and slate quarries give employment to a large number of men.

Events in 1903.—On February 3 a referendum on the liquor question was submitted to the people, and by a majority of 729 a license law was substituted for the prohibition law, which had been on the statute books for fifty years. When the vote on the referendum was taken 80 towns voted "yes" and 140 voted "no." There seemed to have been a change of sentiment in the towns when the town elections came on March 3. All of the cities and 110 of the towns in the State voted for license on the local option question. The law went into effect at once, but owing to the fact that commissioners were to be appointed in each town to issue licenses, saloons could not open until the first of April.

Prohibition has been practically inactive for years, but on the passage of the license law the saloonkeepers determined to use their efforts in giving the State a taste of real prohibition. Beginning on March 3 every bar was closed, and every source of liquor supply was shut to the drinker, unless he got his drinks from across the State line. Entry of liquor to the State was denied. The saloonkeepers became active advocates of the Law and Order League, and made Vermont completely dry for 30 days.

According to the Crop Reporter, the principal crops for 1902 were as follows: Corn, 57,718 acres, 1,258,252 bushels; oats, 77,780 acres, 3,111,200 bushels; potatoes, 27,133 acres, 2,550,502 bushels; hay, 926,878 acres, 1,177,135 tons. The value of the dairy products was $9,321,389.

Work was done during the year on the construction of a system of electric roads, under the franchise granted the Franklin County Traction Company by the State Legislature in 1902. The system is to comprise seventy-two miles of track, and it is planned to complete connections between New York and Montreal. Valuable water power franchises have been acquired by the company for the development of power. The road will open an attractive Summer resort region in one of the most beautiful sections of Vermont, which borders on Lake Champlain.

Virginia.

—

Capital:
RICHMOND.

Virginia has an area of 42,330 square miles, and by the census of 1900 had a population of 1,854,184. The first white men to visit Virginia were the followers of Cabot, who probably entered Chesapeake Bay in 1498; but nothing was heard of the country until Raleigh's ships, in 1548, brought glowing accounts of its resources. The first permanent English settlement in America was made at Jamestown May 13, 1607, by a band of colonists sent out by Sir Thomas Gates and his company, who had obtained a charter from James I. to plant two colonies in Virginia. In 1619 the first Legislature was organized at James City, the capital, a few miles inland from Jamestown. Negro slavery was introduced in 1619 by a Dutch man-of-war. In 1621 the London Company granted a liberal constitution, under which the laws were administered until the time of the Revolution. In 1624 the charter was revoked and Virginia made a royal province, continuing to be the most favored of the American colonies until the time of the Revolution. In 1698 the capital was transferred to Williamstown, where the college of William and Mary had been established in 1693.

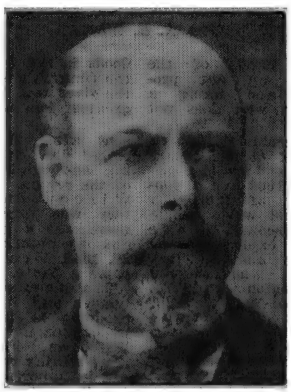
In 1716 Governor Spotswood crossed the Blue Ridge Mountains and was the first white man to reach the great valley beyond. Soon this section began to be settled by Scotch-Irish and German immigrants. Indian wars followed as the settlers moved westward, but in 1744 Virginia purchased from the Indians rights to make settlements to the Ohio, and built a fort where Pittsburg now stands. The French captured this in 1754, and the long French and Indian War followed, until 1763, when, by the treaty of Paris, the Mississippi was made the western boundary of the colony. In 1773 the General Assembly resolved for an "Intercolonial Committee of Correspondence," and for this it was dissolved by Governor Dunmore. In 1774 it again met, this time to protest against the closing of the port of Boston, and was again dissolved by the Governor. In 1781 the State ceded to the Government all her territory beyond the Ohio, stipulating that it should be divided into new States as fast as peopled. The Federal Constitution was ratified in 1788. During the Civil War Virginia suffered more than any other State, her territory being continually overrun by fighting troops. July 6, 1869, a new Constitution was formed, abolishing slavery and accepting the results of the war. The Fifteenth Amendment was ratified in October, 1869, and Virginia was readmitted to the Union in 1870.

Gov. A. J. Montague.

Events in 1903.—On February 7 a concurrent resolution was introduced in the Virginia House of Delegates, asking Congress to "call a constitutional convention for the purpose of submitting to the States an amendment to the Federal Constitution providing for the election of United States Senators by the direct vote of the people." On March 2 a bill was offered in the Legislature providing for the erection of a monument to Robert E. Lee and his generals. The bill called for an appropriation of $50,000, to be supplemented by private contributions. The monument planned was to include in the group of figures Robert E. Lee, "Stonewall" Jackson, J. E. B. Stuart, Joseph E. Johnson, Ambrose P. Hill and Matthew F. Maury. A bill was passed by the Senate on March 4 forbidding Christian Scientists to practice their profession of healing the sick in the State and charging therefor, unless they have been duly examined and licensed by the State Board of Stated Medical Examiners. On April 10 a bill was introduced to prevent two or more persons from conspiring or combining together for the purpose of preventing, deterring or hindering persons from working for whoever they please. The bill was aimed at those who precipitate riots at Virginia mines during strikes. A drastic anti-trust bill was introduced on April 25, modelled after the Missouri law, under which big packing concerns were prosecuted in that State. On May 14 a bill was passed making an appropriation of $500 to remove the remains of the wife and daughter of President Monroe from Loudon County to Hollywood Cemetery, Richmond.

Senator John W. Daniel was declared the nominee to succeed himself in the United States Senate, on June 5. His name was the only one presented to be voted for at the Democratic party primary. Two cases involving the franchise rights of colored men were brought before the Federal Supreme Court in January, to test the new Virginia State Constitution.

The employes of the Richmond Passenger & Power Company went on strike in June, after a demand for increased wages and shortened work days. Rioting ensued and troops were called out by the Governor. The public seemed to be generally in favor of the strikers and refused to use the cars of the company, preferring to walk or ride in stages. A settlement was reached after considerable property had been destroyed and several persons badly injured.



Washington.

Capital:
OLYMPIA.

Washington has an area of 70,574 square miles, and by the census of 1900 had a population of 518,103. The first record in history of the region which is now the State of Washington was the discovery, in 1592, of the Strait of Juan de Fuca by a Greek pilot. In 1775 Captain Hecata, a Spanish navigator, discovered the mouth of the Columbia, but was unable to enter the river. In 1789 Captain Kendrick, an American, sailed through the Strait of Fuca, through the Gulf of Georgia and Queen Charlotte Sound, and was the first to make known the character of these inland waters. On the 11th of May, 1792, Captain Gray, of the American ship Columbia, entered the river, to which he gave the name of his ship. This gave to the United States the priority of claim to the Oregon region, which then comprised the present States of Washington, Oregon and Idaho. In October of the same year an Englishman sailed up and examined the Columbia about 100 miles from the mouth. The coast soon became well known, and the United States Government fitted out expeditions to more thoroughly explore the interior. The most important of these was that under Lewis and Clark, who, ascending the Missouri, made the Clearwater River, thence entering the Columbia and reaching the Pacific Ocean in December, 1805.

In 1810 two expeditions were sent out by companies formed by J. J. Astor for the purpose of engaging in fur trade along the river, and the following year a trading post was established at Astoria, near the mouth of the Columbia. In the meantime another fur trading expedition had been sent out by the Northwest Fur Company in an attempt to forestall the Astor expedition, but it reached the river too late. For some time after the history of the country was merely the record of the Northwest Fur Company and the Hudson Bay Company. During all the years of the fur trading a dispute had been going on between the United States and England, and at times war was threatened. An agreement was arrived at after a time, and in 1846 a treaty was signed fixing the boundary at the forty-ninth parallel. The Territory of Oregon was formed in 1848, and in 1853 the Territory of Washington was established from a part of the original country. Washington was admitted to Statehood November 11, 1889.

There has been a steady increase in manufacturing during the last decade. The discovery of gold in Alaska and the Yukon did much to stimulate business in the western portion of the State. The manufacture of lumber and timber products ranks first, and the preserving of fish is of great importance.

Gov. Henry G. McBride.

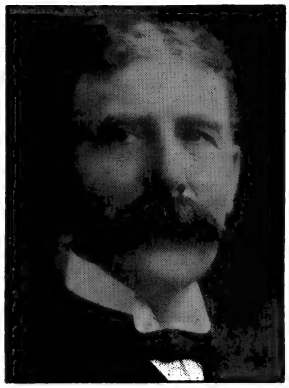
Events in 1903. — Among the bills passed by the last session of the State Legislature the two that attracted the most general attention were those known as the "Barbers' bill" and the "Gambling bill." The former makes it a felony to open a barber shop on Sunday and provides severe penalties for its infraction. It is nearly identical with an Oregon law. The Gambling bill makes it a felony to conduct or to take part in any gambling game whatever in any manner, shape or form. The bill specifies about every sort of gambling device in existence. Other bills were passed, relating to child labor, defining criminal anarchy and fixing penalties, making legal an eight-hour work day, and providing a penalty for a second or third conviction for felony. Levi Ankony was elected United States Senator from Washington on the thirteenth ballot on January 29. On February 24 a formal charge was filed in the House of Representatives charging a member from Seattle with soliciting bribes in connection with an investigation of the State printing contracts. He was accused of asking printing contractors to pay him $1,500 to secure a favorable report regarding contracts by the special committee of which this member was chairman. A committee of five was appointed to investigate the charges. It was said that the gamblers of the State had raised a fund of about $60,000 to be used in defeating the anti-gambling law which finally passed the Legislature.

On March 31 the Grand Jury brought bills of indictment against the Mayor, Chief of Police and other prominent men of Seattle, charging them with embezzlement, obtaining property by fraud, perjury, failure to perform duties and other offences. Every effort was made to have the bills unreported and the most brilliant counsel in the State was employed to argue the cases of those indicted.

A syndicate of New York men obtained a franchise in January for the construction and control of the Port Angeles Pacific Railway, to be built from Port Angeles westward to connect with the Northern Pacific. The road will traverse the largest tract of fir and cedar in the State, and is assured an immense traffic. In April more than 200 shingle mills were closed, owing to a surplus of stock and a dull Eastern market. More than 2,500 men were thrown out of employment.

West Virginia.

Capital:
CHARLESTON.



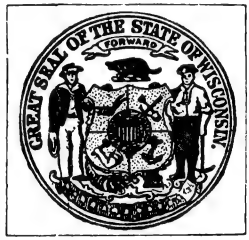
West Virginia has an area of 24,504 square miles, and by the census of 1900 had a population of 958,800. At the outbreak of the Civil War Virginia was divided in sentiment regarding the principles involved in the conflict. The Alleghany Mountains had long divided the State commercially and politically as well as physically into a Virginia and Western Virginia. The Civil War fixed a final boundary between the two sections, and the people of the west, finding their markets along the Ohio River and in closer touch with the people of that region, naturally adopted the principles of those with whom they came in contact. When Virginia passed the Ordinance of Secession in 1861 the Unionist counties in the west met at Wheeling and adopted an ordinance for the reorganization of the State government and the formation of a new State, to be known as Kanawha, to be comprised of thirty-nine specified counties. The ordinance was presented to the voters and accepted by a large majority. A State constitution was adopted, and in November, 1861, a government was formed for the new State of West Virginia. Congress accepted this constitution June 20, 1863.

At the time of separation from the mother State provision was made for an assumption of a just share of the old State's debt, though an adjustment was not reached for years. At the close of the Civil War West Virginia was one of the first States to modify and repeal the enactments which had led to the conflict, and in 1870 they were abrogated forever.

West Virginia is an agricultural State, but has shown a large increase in manufacturing during the last decade. Extreme localization is shown in manufacturing, the twelve counties along the Ohio River

producing more than one-half of all the products of the State. The iron and steel industry of the State, confined almost entirely to Wheeling, is by far the most important. In the production of coke West Virginia is second only to Pennsylvania.

Events in 1903.—Among the important acts passed by the State Legislature were the following: An act to define the powers of trust companies, empowering them to buy, hold, sell and guarantee bonds, stocks, loans and evidences of indebtedness, to engage in a general banking business, to receive upon deposit for safe keeping jewelry, plate, stocks, bonds and valuable property of every description, to act as trustee, assignee, receiver and so forth, and to carry on a general trust company business; an act providing for the taxation of chartered and incorporated companies within the State; an act instituting the West Virginia Asylum for the use of incurable defectives, excepting those suffering with consumption, cancer or leprosy; an act regulating the salaries of State officers; an act placing the regulation, direction and control of all matter relating to the examination of applicants for teachers' certificates in the hands of the State Superintendent of Schools; an act providing for compulsory education and fixing a penalty for any parent or guardian who does not compel the children under his care to attend school for a period of at least twenty weeks yearly. In his message to the Legislature in January Governor White strongly urged the passage of a law to prevent lynching, suggesting that the Governor be given power to remove the sheriff and prosecuting attorney from office who do not do their duty in cases where lynchings have occurred within their jurisdiction.



Gov. A. B. White.

The miners in the northwestern part of the State became turbulent in February while on strike and resisted the Federal authorities. At Stanniford City on February 25 a pitched battle occurred, during which several were killed and many more wounded. At Atkinsville later on another fight took place and a number of colored miners were killed. It was claimed that they were asleep when attacked by United States deputy marshals and were not given a chance to defend themselves. On March 19 the Federal Grand Jury brought indictments against 293 miners charged with conspiracy and resisting Federal officers engaged in the discharge of their duty.

Damage was caused in March by floods in the Ohio and tributary rivers. On March 2 the Ohio was forty-eight feet high at Huntington and the river was full of floating logs and wreckage. The greatest loss was felt by lumbermen.

Wisconsin.

Capital:
MADISON.

Wisconsin has an area of 65,805 square miles, and by the census of 1900 had a population of 2,069,042. The first white people in Wisconsin were French explorers, Jean Nicolet and his followers, who entered the region in 1634. In 1658-59 two fur traders, Radisson and Groseilliers, visited the Mississippi and left a record of their travels. In 1665 a Jesuit mission at La Pointe was founded by Father Claude Allouez, and three years later he established the mission of St. Francis Xavier on the shores of Green Bay. In 1673 Father Marquette, accompanying Louis Joliet, reached the Mississippi by passing through Wisconsin, and later Father Hennepin and La Salle traced other waterways within the territory. Trading posts were established soon after this, becoming dependencies of Mackinaw. About the middle of the eighteenth century a fixed settlement was established at Green Bay, and at the close of the Revolutionary War Prairie du Chien, at the mouth of the Wisconsin, grew into a like settlement, and a few years later La Pointe and Portage became permanent trading posts.

England retained Mackinaw after the treaty of 1783, and American dominion was not felt by the Wisconsin traders until after the War of 1812.

The formation of Astor's company to establish fur trade in this region was followed by a law forbidding English traders in the territory, which resulted in an increase of American influence. By the ordinance of 1787 Wisconsin had been a part of the Northwest Territory. In 1800 it was included in Indiana Territory. In 1809 it passed to Illinois, and in 1818 to Michigan. In 1825 the lead mines in the southern part of the State began to attract attention and considerable mining population came into the country. In 1828 Fort Winnebago was erected at Portage and the mining region was ceded to the whites by the Indians. In 1832 occurred the Black Hawk War, which ended in the almost entire extermination of the Sacs. The punitive expedition sent after them disclosed the rich farming and mining lands of the region. In 1836 Wisconsin Territory was formed and there was a great influx of population. May 29, 1848, Wisconsin became a State.

The manufacture of lumber and timber products is the most important industry in Wisconsin. Flour and grist milling ranks second in importance, and foundry and machine shop products and malt liquors in the order named.

Gov. Robert M. La Follette.

Events in 1903.—John C. Spooner was re-elected to the United States Senate on January 27, receiving a majority of the votes in each House. Neal Brown, of Wausau, received the complimentary votes of the Democrats. On March 5 resolutions were introduced in the Senate providing for an interstate conference on the race question. The text of the resolution authorized the Governor to call upon the Governors of other States to appoint ten delegates each to a convention to be held in Atlanta in July. The question came up for vote on March 10, and because of the opposition shown to the idea by the Governors of Southern States the Senate refused to pass it. Southern newspapers contained strong expressions of disapproval toward such a course and believed that the settlement of the question could not be reached by its discussion in a convention. On March 7 the lower house of the Legislature passed a bill changing the railroad taxation system from the license fee plan to an ad valorem basis. It was estimated that this would mean an increase of $1,000,000 annually to the State when it became a law. A bill to prevent fraud in the measuring of fruits and vegetables provided for standard sizes of measures and baskets for hucksters' wares, which, when offered for sale by the basket or box, must be placed in receptacles of the authorized capacities.

The Crop Reporter (issued January 1, 1903) says the principal crops in Wisconsin in 1902 were: Corn, 1,504,445 acres, 42,425,349 bushels; Winter wheat, 120,058 acres, 2,197,061 bushels; Spring wheat, 412,-

046 acres, 7,458,033 bushels; oats, 2,318,900 acres, 95,037,810 bushels; barley, 488,421 acres, 16,508,630 bushels; rye, 328,552 acres, 5,209,633 bushels; buckwheat, 27,603 acres, 441,648 bushels; potatoes, 250,022 acres, 28,752,530 bushels; hay, 1,920,318 acres, 3,268,604 tons; tobacco, 48,422 acres, 64,885,480 pounds.

Woman Suffrage.

CARRIE CHAPMAN CATT,
Pres. National American Woman Suffrage Asso.

The cause of woman suffrage has been markedly advanced during the last few years, both in the United States and foreign lands, and there are now but few States and countries in which women have not some active voice in the affairs of government. In some places the legal suffrage rights of women are identical with those of the men voters, and in others partial suffrage exists. In this article is shown the present suffrage conditions in those countries where women have a share in the selection of officials and representatives.

Australia.—Australia has extended the suffrage to women more generally than any other country. There are in Australia three distinct classes of suffrage—municipal, parliamentary and federal. Women were given municipal suffrage in New South Wales in 1867, in Victoria in 1869, in West Australia in 1871, in New Zealand in 1877, in South Australia in 1880, in Tasmania in 1884.

The Parliamentary suffrage was extended to the women of New Zealand in 1893, in South Australia in 1895, in West Australia in 1900 and in New South Wales in 1902.

In 1902 the First Federal Parliament extended the federal suffrage to all women in Australia upon the same terms as men, the greatest gain which has been made in the movement for the enfranchisement of women.

All women in Australia, therefore, upon the same terms as men enjoy full municipal and federal suffrage, and the women of West Australia, South Australia and New South Wales possess all forms of suffrage. The women of Victoria, Tasmania and Queensland do not possess the Parliamentary suffrage. New Zealand is not federated, and hence there is no federal suffrage there. Women and men vote upon equal terms in all elections.

Mrs. Carrie C. Catt.

United States.—In the United States women possess suffrage upon equal terms with men at all elections in four States—in Wyoming, established in 1869; in Colorado, in 1893; in Utah, in 1895, and in Idaho, in 1896. In Kansas women possess school suffrage, established in 1861, and municipal suffrage, established in 1887.

In eighteen additional States women possess school suffrage—in Michigan and Minnesota, established in 1875; in New Hampshire and Oregon in 1878; in Massachusetts in 1879; in New York and Vermont in 1880; in Nebraska in 1883; in Wisconsin in 1885; in Washington in 1886; in Arizona, Montana, New Jersey, North Dakota and South Dakota in 1887; in Illinois in 1891; in Connecticut in 1893; in Ohio in 1894. Two additional States permit women to vote upon the issuance of municipal bonds—Montana, established in 1887; Iowa in 1894.

Louisiana gave all women taxpayers the suffrage upon all questions of public expenditures in 1898.

Either full or fractional suffrage for women exists in twenty-six States.

Europe.—In the Isle of Man and Pitcairn Island women have full suffrage. In England, Scotland, Ireland and Wales women vote for all elective officers except members of Parliament. In 1898 women engaged in commerce in France were given the right to vote for judges of the Tribunals of Commerce. In Sweden women vote for all elective officers except representatives; also, indirectly, for members of the House of Lords. In Norway women vote for all officers except members of Parliament. In Russia women householders vote for all elective officers and on all local matters; in Finland for all elective officers. Property holding women in Westphalia, Schleswig-Holstein and Brunswick may vote by proxy at local elections and for members of provincial diets. Women who are landed proprietors may vote in Bohemia by proxy for members of the Imperial Parliament and the local diet. In Saxony women vote on the same terms as men; married women by proxy, single women directly. Women have municipal suffrage in Moravia by proxy. In Austria-Hungary they vote by proxy for all elective officers. In Croatia and Dalmatia women vote at local elections in person. In Italy widows with property vote by proxy for members of Parliament. In Prussia women vote by proxy at local elections and for members of provincial diets, and in Luxemburg for municipal officers and members of the Legislature also. In Switzerland women real estate owners have local suffrage in the canton of Berne. In Roumania women taxpayers have municipal suffrage by proxy.

The National American Woman Suffrage Association maintains national headquarters at Warren, Ohio. Its officers are: Honorary President—Susan B. Anthony, Rochester, N. Y.; President—Carrie Chapman Catt, 205 West Fifty-seventh street, New York; Vice-President-at-Large—Rev. Anna H. Shaw, Philadelphia; Corresponding Secretary—Kate M. Gordon, New Orleans; Recording Secretary—Alice Stone Blackwell, Boston; Treasurer—Harriet Taylor Upton, Warren, Ohio. Auditors—Laura Clay, Lexington, Ky., and Mary J. Coggeshall, Des Moines, Ia. State associations auxiliary to the national body exist in each State.

Wyoming.

—

Capital: CHEYENNE.

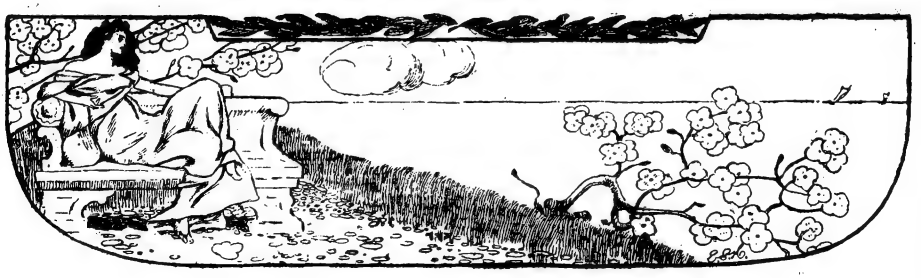
Wyoming has an area of 97,890 square miles, and by the census of 1900 had a population of 92,531. Wyoming was first visited by white men in 1742 and 1744, when Sieur de Verendrye, with a party from Canada, entered the territory and discovered the Rocky Mountains. John Colter, of Lewis and Clark's expedition of 1806-10, explored the northern part of the section and discovered Yellowstone Park. In 1807 Ezekial Williams made extensive explorations in Wyoming, and in 1812 Robert Stuart's courier party discovered the route to the West known as the "Oversland Trail." In 1834 Sublette and Campbell built Fort Williams, afterward called Fort Laramie, and established the first permanent post in the State. In 1834 the first emigrants to the Pacific Coast passed along the overland trail, and in 1836 the first white women crossed the Rocky Mountains.

Fort Bridger, the second permanent post, was built in 1842. In 1847 the advance guard of the Mormons crossed Wyoming on their way to Utah. Fort Laramie was garrisoned in 1849 and made a Government post. In 1854 began a series of Indian wars which con-

tinued until 1876. The greatest Indian uprising happened from 1862 to 1868, and in 1866 occurred the massacre of Fort Phil Kearny, when Colonel Fetterman and eighty men were killed. The gold mines of Sweetwater were discovered in 1867, and the city of Cheyenne was founded in the same year. The first passenger train on the Union Pacific Railroad arrived in Wyoming in 1867. In 1868 the Territory of Wyoming was organized. Cheyenne was designated as the capital, and Laramie was founded. The first Territorial Legislature convened at Cheyenne in 1869. An act was approved that year giving women the right to vote and hold office in Wyoming. Coal was discovered in 1869 and the first mine was opened. In 1890 Wyoming was admitted to Statehood and the first Legislature convened at Cheyenne. In the same year cowboys, in an attempt to put a stop to train robbery, brought about a period of outlawry that necessitated a call for United States troops.

Gov. Fennimore Chatterton.

Wyoming is a stock-raising and mining State, and its manufacturing industries are limited almost entirely to articles for home consumption. Iron ore and petroleum are found plentifully, but transportation facilities are poor, and the development of these resources is not far advanced. Work is being done steadily by the Union Pacific Railroad in developing sections of the State and in inducing homeseekers to take up residence there.



Events in 1903. — Governor De Forest Richards died in April, and under the Wyoming law Secretary of State Fennimore Chatterton became Governor, leaving the office of Secretary vacant. State Engineer Fred Bond died on August 10 and Professor C. T. Johnson was appointed to succeed him. State Treasurer Henry G. Hay resigned on September 1 to join the United States Steel Company at New York. He was succeeded by Hon. William C. Irvine. The presidency of the State University was left vacant by the resignation of E. E. Smiley on September 1.

Unusually severe weather prevailed in Wyoming in February, following a blizzard which raged for three days. In some sections of the State the thermometer dropped to twenty-five degrees below zero. Many sheep on the ranges were frozen or snowed under and all stock out of shelter was in danger. The trouble of 1902 between the sheepmen and the cattlemen of the Sweetwater region was not repeated in 1903, although it was expected. The cattlemen decided to allow the sheep raisers to use their leased land for grazing purposes in the Spring, promising to have the matter finally settled in the Fall. An outbreak of scab on the sheep ranges caused the Board of Sheep Commissioners considerable anxiety during the Summer, and about 6,000,000 sheep were dipped under its direction to eradicate the disease.

The largest amount of coal ever mined in any single colliery in Wyoming was taken from the Woodward Colliery in August, when 64,000 tons were mined in one month. It was reported that the entire yield for the year would far surpass that of any previous season.

A hundred-barrel oil gusher was struck near Evanston on September 1. The land was held by the Union Pacific Railroad as part of the grant given by Congress when the road was constructed. In 1902 all of this land was filed on by oil prospectors, the Government discontinuing the issuing of patents to the railroad for a time to give the prospectors a chance to determine whether the field was oil-producing.

An explosion of firedamp at mine No. 1 of the Union Pacific Coal Company on June 30 caused the death of 284 miners, injured scores of others and destroyed a vast amount of property. Of the men killed about 100 were Finlanders, 50 were colored and the rest were Americans.

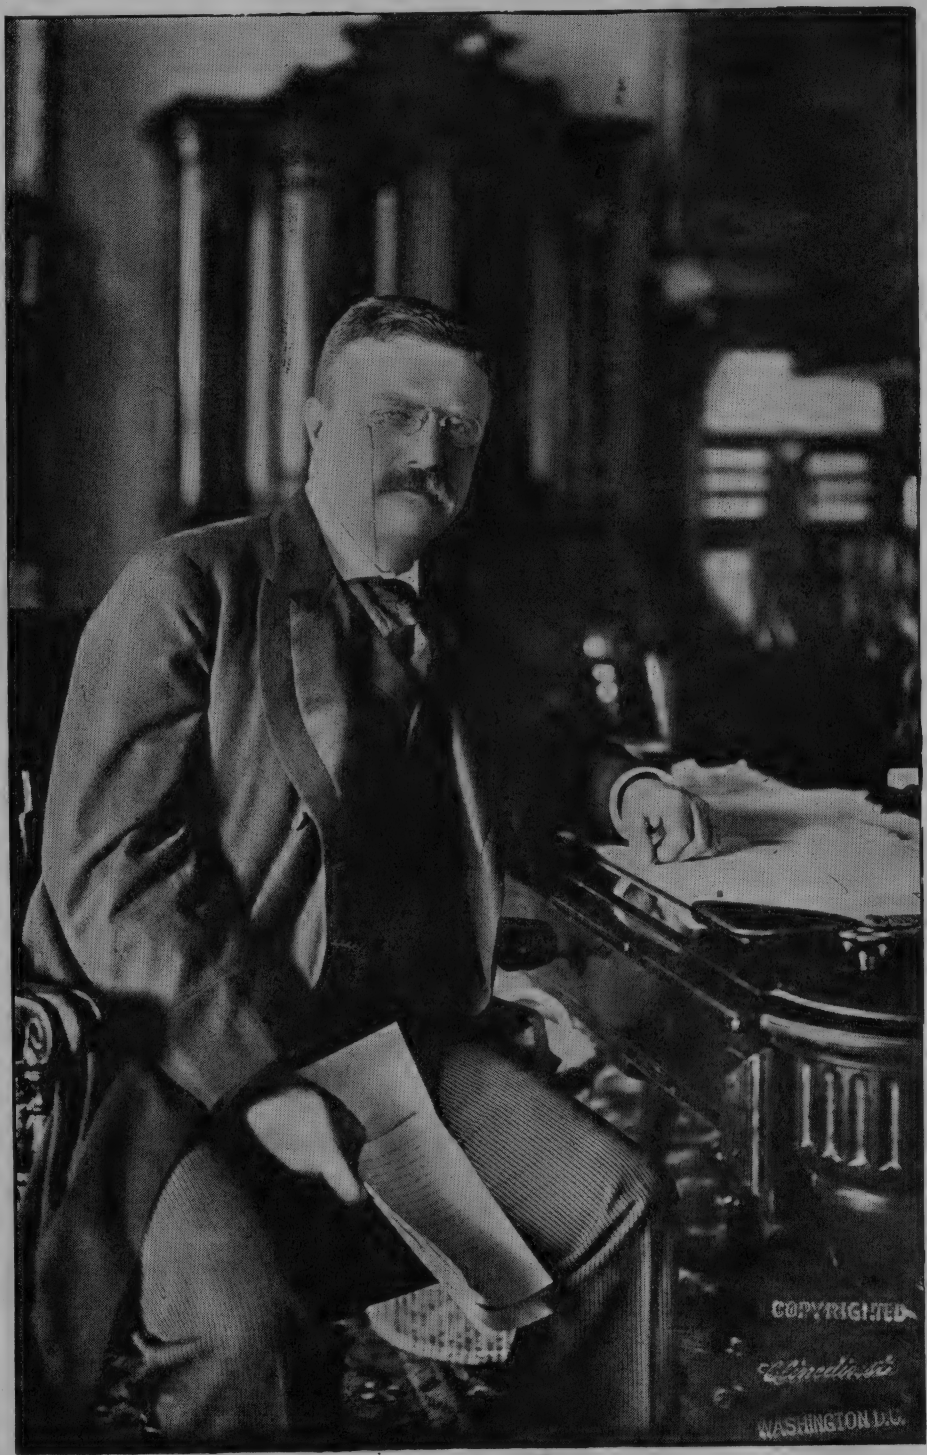
Zanzibar.

—

Capital:
ZANZIBAR.

Zanzibar is an island lying off the east coast of Africa. It has a considerable foreign population, mostly engaged in trading. There are about fifty Englishmen, forty Germans, a few Americans, Frenchmen, Italians, Greeks and Roumanians, the last two being under British protection. There are also about 7,000 British Indian subjects, through whose hands almost the whole trade of Zanzibar and of East Africa passes, directly or indirectly. The town of Zanzibar has a population estimated at from 50,000 to 60,000.

Hamid bin Thwin, the former Sultan, died on August 25, 1902. He was forty years old and had been on the throne but three years. Immediately upon his death Said Khalid seized the palace, with a force of 700 armed askairs and proclaimed himself Sultan. He was soon reinforced, and within twenty-four hours had 2,500 well-armed and well disciplined men under his command. He was ordered by the British to haul down his flag and surrender without delay under promise that his claims to the throne should be fairly adjudicated, but refused to do so, declaring that he would sooner die in defence of his alleged rights. He persisting in his refusal, the British bombarded the city, the palace being destroyed and captured by them. Said Khalid escaped and took refuge in the German Consulate. Hamid, a cousin of the late Sultan, was proclaimed his successor. After a month Said Khalid was conveyed on board a German war sloop and was taken out of the reach of the British, who had repeatedly and vigorously demanded his surrender. The Germans took the ground, however, that his offence was political, and he was therefore not extraditable, and refused to give him up. Since 1890 Zanzibar, while the Sultan was the titular sovereign, has been practically a protectorate under British administration. All accounts are always open to inspection of the British Consul-General, without whose consent no new undertakings or additional expenditures can be incurred. The revenue is mainly derived from customs dues and taxes on produce, chiefly cloves. Mohammedanism is the religion of the country, most of the natives of the coast and islands being Sunnis of the Shati school, although many are heathen. There are Christian missions on the island and far into the mainland, but the natives do not take kindly to this religion, and conversions are few.



Sultan of Zanzibar.

The British have for years carried on a sharp contest against the slave trade, but without much success. The coast was so scantily guarded that it was easy for a trader to slip out with a boatload of slaves, and this was often done. The ever-increasing demand for them was supplied by raiding parties, who visited the interior for that purpose. The treatment of those captured by these raiders was cruel in the extreme. They were often murdered when they objected to being taken from their homes. Many abandoned captives were left to die in their huts, and many more were killed rather than that they should fall into the hands of other dealers. The principal countries to which the slaves were sold were Turkey, Egypt, Persia, Tunis, Morocco and Madagascar. Under the new ruler England will have more control than ever over the island and the natives, and will probably succeed in entirely abolishing the slave trade.

Justice is administered among the Sultan's subjects by various cadis, but power has been delegated the British Agent and the Consul-General to try all cases in which a British subject is involved with a Zanzibar subject or the subject of a non-Christian nation without a treaty. The judges of the British court form an appeal court from the chief court of the East African Protectorate. The British court also has jurisdiction over all slaves freed by the British Agent and Consul-General, but, as the legal status of slavery was abolished in 1897, the relations between masters and slaves are no longer recognized by the tribunals.

THEODORE ROOSEVELT.
Twenty-sixth President of the United States.

The American Year Book

The Government of the United States.

The Declaration of Independence was adopted by the First Congress of the United States, July 4, 1776. On November 30, 1782, Great Britain acknowledged the independence of the colonies, and on September 3, 1783, the treaty of peace was concluded. The form of government is based on the Constitution adopted September 17, 1787, to which ten amendments were added December 15, 1791, an eleventh amendment January 8, 1798; a twelfth amendment September 25, 1804; a thirteenth December 18, 1865; a fourteenth July 28, 1868, and a fifteenth March 30, 1870.

The Government is entrusted to three separate authorities—the Executive, the Legislative and the Judicial. The Executive is vested in the President, who holds his office during the term of four years. He is commander-in-chief of the army and navy and of the militia in the service of the United States. The Vice-President is, ex-officio, president of the Senate, and, in case of the death or resignation of the President, he becomes President for the remainder of the term. Electors for President and Vice-President are chosen in all States the Tuesday after the first Monday in November of every fourth year (leap year), and the President is inaugurated on the 4th of March next following. The President has a salary of $50,000 a year and the Vice-President $8,000.

By an act which became a law January 19, 1886, in case of the removal, death, resignation or inability of both President and Vice-President, the Secretary of State succeeds, and after him other members of the Cabinet in this order: Secretary of Treasury, Secretary of War, Attorney-General, Postmaster-General, Secretary of the Navy, Secretary of the Interior (the Secretary of Agriculture cannot succeed, as his office was created after the passage of the Acts of the Forty-ninth Congress, Chapter IV.). The incumbent shall act as President until the disability of the President is removed or a new President shall be elected. In case of death or removal of the Vice-President the duties of the office shall fall upon the pro tempore president of the Senate, who receives the salary of Vice-President. Members of the Cabinet are appointed by the President, but are confirmed by the Senate.

The Legislative power is vested in a Congress, which consists of a Senate and a House of Representatives. The judicial power is vested in a Supreme Court consisting of a Chief Justice and eight Associate Justices, appointed by the President and approved by the Senate.

The United States is composed of 13 original States, 7 States which were admitted without having been organized as Territories, and 25 States which have been Territories. States are admitted into the Union by special acts of Congress, either in the form of "enabling acts," providing for the drafting and ratification of a State Constitution, in which case the Territory becomes a State as soon as the conditions are fulfilled, or by accepting a Constitution already framed, and at once gaining admission. In four of the six Territories, including Hawaii, there are local Legislatures, the form of which has been prescribed by the Federal Government. Acts made by the Legislatures may be modified or annulled by the Federal Congress. Territorial Governors are appointed by the President for terms of four years. Alaska and Indian Territory have no power of self-government, but are in charge of Governors, who act without Legislatures. Civilized tribes in Indian Territory maintain local governments of their own, with elective Legislatures and executive officers, whose functions are strictly limited to the persons and personal property of the Indians.

The unit of local government in New England is the township, governed directly by the voters. In large cities the city government takes its place. Townships are united to form counties. In the South the unit is the county. In the Middle and Northwestern States the two systems of local government are mixed. In the West the township system is used and public lands are divided into townships six miles square.

Representatives to the Federal Congress must not be less than twenty-five years of age and must have been citizens of the United States for seven years, and residents of the State in which they are elected. In addition to the Representatives from the States, each Territory is allowed a "delegate," who has a right to speak on any subject and make motions, but not to vote. Senators must be thirty years of age, must have been citizens of the United States for nine years and residents of the State in which they are chosen.

The franchise is not absolutely universal. In most States residence for at least one year is necessary; in Kentucky and Rhode Island two years' residence is necessary; in Michigan and Maine three months is the minimum. In some of the Western States unnaturalized persons who have declared their intention of becoming citizens are admitted to the franchise. Four States admit women to the franchise on equal terms with men. Untaxed Indians are excluded from the right to vote, and in some States convicts, duellists and fraudulent voters are debarred.

THE NEW DEPARTMENT OF COMMERCE AND LABOR.

The Department of Commerce and Labor was created by act of Congress on January 17, 1903. The purpose of its creation was stated as follows in the bill: "It shall be the province and duty of said department to foster, promote and develop the foreign and domestic commerce, the mining, manufacturing, shipping and fishery industries, the labor interests and the transportation facilities of the United States."

The agitation for such a department began in Boston business circles some twenty years ago. Nothing definite was accomplished, however, until the introduction of a bill in the Fifty-sixth Congress by Senator Frye, for the Senate, and Mr. Hepburn, for the House, recommending the establishment of a "Department of Commerce and Manufactures." The National Association of Manufacturers undertook to make the demand for such a department universal, and to that end circulated literature throughout the country, showing the necessity of such a department to further the growing export trade, and setting forth the benefits to be derived from its influence in developing industries. The leading boards of trade and commerce in the United States all favored the idea and passed resolutions appealing to Congress to create such a department.

Little resistance was encountered, but several amendments to the bill were made. As finally passed it establishes the "Department of Commerce and Labor," makes the secretary a Cabinet officer at $8,000 a year and provides for an assistant secretary at $4,000 a year. It also creates a Bureau of Manufactures and a Bureau of Corporations. It transfers to the new department from the Treasury Department the Bureau of Immigration, including the enforcement of the Chinese Exclusion Act, the Bureau of Statistics, the Lighthouse Service, the National Bureau of Standards, the Steamboat Inspection Service, the Bureau of Navigation, the United States Shipping Commissioners and the Coast and Geodetic Survey; from the Interior Department the Census Office, and from the State Department the Bureau of Foreign Commerce, including the reports of the Consular Service. Two formerly independent departments, the Bureau of Labor and the Commission of Fish and Fisheries, are also transferred to the new department.

The reasons stated for the creation of such a department are many. The Treasury Department was burdened with a great deal of important and difficult bureau work, which had no relation whatever to the objects for which the department was originally intended. The Treasury Department, it was declared, had all it could do to administer the finances. The Interior Department more than had its hands full with its various divisions, so it was deemed wise to remove the Census Office from its control. In regard to the Consular Service, it was found that its reorganization under the new department would make it worth a hundred times the cost of the whole department. Moreover, with its comprehensive knowledge of trade conditions, the new department will be the best possible resort for inquiries from people who desire to know the facts about the tariff; so, too, in time certain phases of the tariff issue may be eliminated from politics, or, at any rate, popular impulse will not be likely to revise the tariff generally or violently.

The Bureau of Commerce, according to all expectations, will have a large and important influence on the future of the trusts in America. The clause creating it reads: "The Commissioner shall have authority to make, under direction of the Secretary, diligent investigation into the organization,

conduct and management of the business of any corporation, joint stock company or corporate combination engaged in commerce among the several States and with foreign nations, excepting common carriers * * * and to gather such information and data as will enable the President of the United States to make recommendations to Congress for legislation for the regulation of such commerce, and to report such data to the President from time to time as he shall require."

The Bureau of Manufactures was established to promote, foster and develop the various manufacturing industries of the United States and markets for their products at home and abroad, by gathering, compiling, publishing and supplying all valuable and useful information concerning such industries and such markets as shall best promote the interests of the American manufacturer.

An attempt was made to create a Bureau of Insurance, but it failed. The following clause, however, was tacked to the Bureau of Corporations provision: "It shall also be the province and duty of said bureau * * * to gather, compile, publish and supply useful information concerning corporations * * * including corporations engaged in insurance."

It is also anticipated that the mobilization of the various offices into the Department of Commerce and Labor will enable their work to be carried on with more unity and with more benefit to the country in general.

The principal officials created by the institution of the new department are George B. Cortelyou, Secretary of Commerce and Labor, and James R. Garfield, Chief of the Bureau of Corporations.

The Presidents of the United States.

§ Widows. Their maiden names are in parentheses.

¶ She was the divorced wife of Captain Robards.

(a) The present Democratic party claims to be the lineal successor of the first Republican party, and to have been founded by President Jefferson.

(b) There was little party organization at the time of the election of John Quincy Adams. He claimed to be a Republican, but was really a Federalist. His opponents adopted the name of Democrats and later elected Jackson President.

Washington was first inaugurated in New York. His second inauguration took place in Philadelphia. John Adams was inaugurated in Philadelphia. Jefferson and each succeeding President elected by the people were inaugurated in Washington. Grant was christened Hiram Ulysses, but changed his name to Ulysses Simpson. Cleveland was christened Stephen Grover, but dropped the Stephen.

W. H. Harrison was the oldest man elected President, and Grant the youngest, but Roosevelt was the youngest to become President. Cleveland was the only President who was married in the White House.

WAR RECORDS OF THE PRESIDENTS.

Revolutionary War—Washington, Monroe and Jackson.
War of 1812-15—Jackson, W. H. Harrison, Tyler, Taylor and Buchanan.
Black Hawk War—Lincoln.
Mexican War—Taylor, Pierce and Grant.
Civil War—Grant, Hayes, Garfield, Arthur, Benjamin Harrison and McKinley.
War with Spain—Roosevelt.

THE PRESIDENTIAL SUCCESSION.

Succession to the Presidency is fixed by the Acts of the Forty-ninth Congress, Chapter IV., which provide that in case of the removal, death, resignation or inability of both the President and the Vice-President, then the Secretary of State shall act as President until the disability of the President or Vice-President is removed or a President is elected. If there be no Secretary of State, then the Secretary of the Treasury shall act; and the order of succession is: Secretary of War, Attorney-General, Postmaster-General, Secretary of the Navy and the Secretary of the Interior. The Secretaries of Agriculture and of Commerce and Labor cannot succeed to the Presidency, as their offices were created after the passage of this act.

This act applies only to such Cabinet officers as shall have been appointed by the consent of the Senate and are eligible under the Constitution to the Presidency.

Upon taking office, the acting President must convene Congress, if it is not at that time in session, in extraordinary session, giving notice of twenty days.

COURT OF PRIVATE LAND CLAIMS.

According to the act of establishment, approved by Congress, March 3, 1891, this court is to cease and determine on June 30, 1904. The official address of the court is Santa Fe, New Mexico, and it is composed of the following members: Chief Justice, Joseph B. Reed, of Iowa; Associate Justices, Henry C. Sluss, of Kansas; William W. Murray, of Tennessee; Wilbur F. Stone, of Colorado, and Frank I. Osborne, of North Carolina; United States Attorney, Matthew G. Reynolds, of Missouri.

UNITED STATES CIRCUIT COURT OF APPEALS.

According to an act passed March 3, 1891, "the Chief Justice and the Associate Justice of the Supreme Court assigned to each circuit, the Circuit Judges within each circuit and the several district judges within each circuit shall be competent to sit as judges of the Circuit Court of Appeals within their respective circuits." The assignment of United States Supreme Court Justices is as follows:

First Circuit, Oliver Wendell Holmes; Second Circuit, Rufus W. Peckham; Third Circuit, Henry B. Brown; Fourth Circuit, Melville W. Fuller; Fifth Circuit, Edward D. White; Sixth Circuit, John M. Harlan; Seventh Circuit, William R. Day; Eighth Circuit, David J. Brewer; Ninth Circuit, Joseph McKenna.

United States Consular Reports.

Eminently an industrial and commercial nation, the United States, more than any other nation, pays close attention to those conditions in other countries which affect its interests in this phase of its character. While this fact is very largely appreciated by the leading business men of the country, it is not so generally understood as it might be, and this is especially the case in the matter of those public documents known as consular reports. Consuls are officials whose work in foreign lands varies according to the policy and laws of the countries which they represent. Their duties relate chiefly to commercial matters, and to looking after certain interests of fellow citizens or fellow subjects appealing to them for advice, for information, or for such protection as their country's flag may afford to them under existing treaty arrangements. In the origin of the service it was a system of commercial agency altogether, and it is not, as many people suppose, a part of the diplomatic machinery, although a consul, acting under special instructions, may be at times a diplomatic representative of his country. A noteworthy case was that of General Fitzhugh Lee, who was vested with large diplomatic power while United States Consul-General at Havana, during the period immediately preceding the Spanish-American War.

Under the admirable consular system which the United States Government has developed there is benefit for nearly every branch of industrial and commercial enterprise, and the possibilities can be improved just so far as producers, manufacturers and merchants make themselves possessors of the advantage offered in the reports which United States consuls in every part of the world are obliged to make annually to the State Department. These reports cover the agriculture, the manufactures, the commerce and the labor statistics of every country. There is infinite variety in the information given, and it is all valuable. New methods for production of crops or for manufactures of every kind; improved systems in large industries; devices for facilitating any branch of labor; conditions affecting crop prospects; statistics of demand and supply in the markets; the development of new lines of industry or trade, and many other things important to the farmer, the manufacturer, the importer or the exporter here, are faithfully reported upon, and the store of information thus gathered is at the command of any citizen of the United States who chooses to ask for it.

The United States Government has about 750 consular representatives abroad, this number including all grades of the service. The gradations are consul-general, consul, vice-consul, deputy consul, commercial agent and agent. Salaries paid to these representatives range from $1,000 per annum up to $7,500, the sum last mentioned being the salary of the consul-general at Seoul, Korea. The next largest salary is paid to the consuls-general at London, Liverpool, Paris, Rio de Janeiro, Calcutta, Hong Kong, Shanghai, Bangkok, Cairo and Teheran, the amount being $5,000 per annum. Melbourne, Australia, is the next most important station, the consul-general there receiving $4,500. Next in order come Berlin, Yokohama, Montreal and the City of Mexico, consulates-general paying $4,000 each. Some of the minor consular agents receive only such fees as they may be entitled to demand for official services rendered.

As gleaners of information of value to the home government and to the country at large, the consular representatives of the United States are restricted only by such laws of the countries to which they are accredited as may debar them from obtaining or imparting information of certain specified character. These restrictions are rarely encountered, however. The work is done, as a rule, not only with fidelity, but with a degree of intelligence which seldom permits ground for serious criticism. Even as a means of studying the world's material progress the consular reports have immense educational value, and they could be as effectively used in the schools of business as in the active prosecution of agriculture, manufacture and commerce. In technical matters consular reports are absolutely invaluable.

The office of consul, as it exists in modern times, is not to be confounded with that which the patricians of the ancient Roman Republic conferred upon those of their own number who were elected to exercise ruling power, and which was revived in the French Republic overturned by Napoleon, who held the office and made it the stepping stone to imperial sway. Its name, which indicates that consuls are officials charged with taking care of something for others, was bestowed upon those commercial agents who were appointed by European nations during the twelfth century, after the crusades had opened to them a considerable intercourse with the East. These agents were sent by their respective governments to reside at seaports and other important centres of trade, and semi-official recognition was obtained for them by Venice, Genoa and other Italian States, which were the first to recognize the value of such service as these agents might be able to render. Other maritime peoples were quickly cognizant of the advantages of the system, which extended, and has developed to the extent that all commercial nations at the present time maintain consulates wherever their citizens have established trade. Some countries invest their consuls with judical authority, to be exercised in the settlement of disputes between citizens of the country they represent who may happen to be within the jurisdiction of the consulate. This, of course, requires the consent of the foreign government within whose territory the consul is located. Neither the United States Government nor that of Great Britain confers authority of this kind upon its consular representatives, except that in semi-civilized countries, where the native laws are imperfect or imperfectly administered, it is found necessary to make the consulate a means of affording to foreign residents that protection of property and life which otherwise would be lacking. Under the provisions of a consular convention between France and the United States, agreed to in 1788, American consuls were given judicial power for the settlement of disputes between masters of vessels and members of their crews in regard to wages. Subsequent treaties with several other European nations gave to consuls similar jurisdiction. Consular reports are now issued through the new Department of Commerce and Labor, to which they are turned over by the Department of State.

The Army of the United States.

The United States Army, as at present constituted, is organized under the act of Congress of February 2, 1901. It consists of fifteen regiments of cavalry, an artillery corps, 30 batteries of field artillery and 126 companies of coast artillery; 30 regiments of infantry, 3 battalions of engineers and an additional provisional force of more than 5,000 men. As now constituted, the total strength of the army is 65,971 men, 3,820 of whom are commissioned officers. By act of 1901, the army shall at no time exceed 100,000 men.

The organization of the army is as follows:

Station.	Privates.	Total Commissioned.	Total Enlisted.	Cadets.	Aggregate.
General officers	....	22	....	....	22
Aides de Camp to general officers	....	....	....	....	....
Adjutant-Gen.'s Dept.	....	28	....	....	28

DIVISIONS AND DEPARTMENTS OF THE ARMY.

Division of the Philippines—Consisting of the Departments of Luzon, Visayas and Mindanao. Commander, Major-General James F. Wade.

Department of Luzon—Includes all that part of the Philippine Archipelago lying north of a line passing southeastwardly through the West Pass of Apo, or Mindoro Strait, to the twelfth parallel of north latitude; thence east along said parallel to the 124th degree 10 minutes east of Greenwich, but including the entire island of Masbate; thence north to San Bernardino Straits; headquarters, Manila, P. I. Commander, Brigadier-General George M. Randall.

Department of the Visayas—To include all islands south of the southern line of the Department of Luzon and east of longitude 121 degrees 45 minutes east of Greenwich, and north of the 9th parallel of latitude, excepting the islands of Mindanao, Paragua and all islands east of the Straits of Surigao. Commander, Brigadier-General Theodore J. Wint.

Department of Mindanao—Includes all the remaining islands of the Philippine Archipelago. Commander, Major-General Leonard Wood.

Department of California—States of California and Nevada, the Hawaiian Islands and their dependencies; headquarters, San Francisco, Cal. Major-General Arthur MacArthur, Commanding.

Department of the Colorado—States of Wyoming (except so much thereof as is embraced in the Yellowstone National Park), Colorado and Utah, and the Territories of Arizona and New Mexico; headquarters, Denver, Col. Brigadier-General Frank D. Baldwin, Commanding.

Department of the Columbia—States of Washington, Oregon, Idaho and the Territory of Alaska (except so much of Idaho as is embraced in the Yellowstone National Park); headquarters, Vancouver Barracks, Wash. Brigadier-General Frederick Funston, Commanding.

Department of Dakota—States of Minnesota, North Dakota, South Dakota, Montana and so much of Wyoming and Idaho as is embraced in the Yellowstone National Park; headquarters, St. Paul, Minn. Brigadier-General William A. Kobbe, Commanding.

Department of the East—New England States, New York, New Jersey, Pennsylvania, Delaware, Maryland, District of Columbia, West Virginia, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, the island of Porto Rico and the islands and keys adjacent thereto; headquarters, Governors Island, N. Y. Major-General Henry C. Corbin, Commanding.

Department of the Lakes—States of Wisconsin, Michigan, Illinois, Indiana, Ohio, Kentucky and Tennessee; headquarters, Chicago, Ill. Major-General John C. Bates, Commanding.

Department of the Missouri—States of Iowa, Nebraska, Missouri, Kansas and Arkansas, the Indian Territory and the Territory of Oklahoma; headquarters, Omaha, Neb. Major-General Samuel S. Sumner, Commanding.

Department of Texas—State of Texas; headquarters, San Antonio, Tex. Brigadier-General Frederick D. Grant, Commanding.

The field officers of the various regiments and corps are:

First Cavalry—Colonel Martin B. Hughes, Lieutenant-Colonel Frederick K. Ward, Major Joseph A. Gaston, Major Jacob G. Galbraith, Major H. J. Slocum.

Second Cavalry—Colonel Winfield S. Edgerly, Lieutenant-Colonel Walter S. Schuyler, Major Daniel C. Pearson, Major Augustus P. Blocksom, Major Daniel H. Boughton.

Third Cavalry—Colonel Joseph H. Dorst, Lieutenant-Colonel William H. Beck, Major George A. Dodd, Major Edwin P. Andrus, Major Andrew G. Hammond.

Fourth Cavalry—Colonel Edgar Z. Steever, Lieutenant-Colonel Samuel W. Fountain, Major Cunliffe H. Murray, Major Frank A. Edwards, Major James Lockett.

Fifth Cavalry—Colonel Clarence A. Stedman, Lieutenant-Colonel George H. Paddock, Major Charles H. Watts, Major Hoel S. Bishop, Major Franklin O. Johnson.

Sixth Cavalry—Colonel Allen Smith, Lieutenant-Colonel Peter S. Bomus, Major George K. Hunter, Major John Pitcher, Major Benjamin H. Cheever.

Seventh Cavalry—Colonel Charles Morton, Lieutenant-Colonel Samuel L. Woodward, Major Charles A. Varnum, Major Ezra B. Fuller, Major Loyd S. McCormick.

Eighth Cavalry—Colonel George S. Anderson, Lieutenant-Colonel Henry P. Kingsbury, Major Charles G. Ayres, Major William A. Shunk, Major Henry L. Ripley.

Ninth Cavalry—Colonel Edward S. Godfrey, Lieutenant-Colonel Edward A. Godwin, Major John Bigelow, Jr., Major James B. Erwin, Major George B. Morgan.

Tenth Cavalry—Colonel Jacob A. Augur, Lieutenant-Colonel Otto L. Hein, Major George L. Scott, Major William D. Beach (gen. staff), Major Robert D. Read, Jr.

Eleventh Cavalry—Colonel Earl D. Thomas, Lieutenant-Colonel William Stanton, Major James B. Hickey, Major Frederick W. Sibley, Major Homer W. Wheeler.

Twelfth Cavalry—Colonel John B. Kerr (gen. staff), Lieutenant-Colonel George F. Chase, Major John F. Guilfoyle, Major Henry F. Kendall, Major Horatio G. Sickel.

Thirteenth Cavalry—Colonel Charles A. P. Hatfield, Lieutenant-Colonel Frank U. Robinson, Major Levi P. Hunt, Major Thaddeus W. Jones, Major Charles W. Taylor.

Fourteenth Cavalry—Colonel, Thomas C. Lebo, Lieutenant-Colonel Joseph Garrard, Major Francis H. Hardie, Major Charles M. O'Connor, Major Hugh L. Scott.

Fifteenth Cavalry—Colonel William M. Wallace, Lieutenant-Colonel Alexander Rodgers, Major Matthias W. Day, Major John C. Gresham, Major Curtis B. Hoppin.

THE ARTILLERY CORPS.

Chief of Artillery, with rank of Brigadier-General—W. F. Randolph (gen. staff).

Colonels—C. Morris, S. M. Mills, J. P. Story, G. G. Greenough, A. H. Merrill, W. Ennis, G. S. Grimes, J. M. K. Davis, B. K. Roberts, J. O'Hara, A. C. Taylor, H. W. Hubbell, W. F. Stewart.

Lieutenant-Colonels—A. W. Vogdes, Frank Thorp, L. V. Caziarc, W. Howe, P. Leary, Jr., E. T. C. Richmond, R. D. Potts, E. R. Hills, S. W. Taylor, C. Humphreys, L. Lomia, A. D. Schenck, S. Pratt, J. McClellan, H. R. Anderson.

Majors—R. H. Patterson, O. D. Wood, E. Davis, J. M. Califf, C. W. Hobbs, J. D. C. Hoskins, H. L. Harris, A. Murray, W. E. Birkhimer, T. R. Adams, J. A. Lundeen, M. Crawford, G. N. Whistler, H. A. Reed, A. S. Cummins, A. B. Dyer, L. H. Walker, W. P. Duvall (gen. staff), H. M. Andrews, C. D. Parkhurst, B. H. Randolph, M. M. Macomb (gen. staff), J. P. Wisser, G. F. E. Harrison, J. R. Williams, W. B. Homer, G. L. Anderson, L. Niles, W. H. Coffin, A. Todd, E. T. Brown, A. Slater, J. C. Bush, H. H. Ludlow, W. R. Hamilton, C. W. Foster, C. Deems, J. V. White, E. M. Weaver, E. D. Hoyle, G. Adams, F. Marsh, C. G. Woodward.

First Infantry—Colonel Walter T. Duggan, Lieutenant-Colonel Henry A. Green, Major Frank de L. Carrington, Major Robert N. Getty, Major John S. Mallory (gen. staff).

Second Infantry—Colonel Francis W. Mansfield, Lieutenant-Colonel William B. Wheeler, Major Nat P. Phister, Edward H. Browne, Harry L. Bailey.

Third Infantry—Colonel Harry L. Haskell, Lieutenant-Colonel James E. Macklin, Major Arthur Williams, William L. Buck, Edward H. Plummer.

Fourth Infantry—Colonel P. Henry Ray, Lieutenant-Colonel Calvin D. Cowles, Major Henry E. Robinson, Major Charles W. Mason, Major John C. F. Tillson.

Fifth Infantry—Colonel Henry H. Adams, Lieutenant-Colonel George P. Borden, Major William H. C. Bowen, Edward F. Glenn, Wallis O. Clark.

Sixth Infantry—Colonel Joseph W. Duncan, Lieutenant-Colonel R. H. R. Loughborough, Major William W. Wotherspoon, Major Charles G. Morton, Major John H. Beacom.

Seventh Infantry—Colonel Daniel Cornman, Lieutenant-Colonel Charles A. Booth, Major Edward E. Hardin, Major Arthur C. Ducat, Major Walter K. Wright.

Eighth Infantry—Colonel William E. Dougherty, Lieutenant-Colonel Charles J. Crane, Major Richard H. Wilson, Major Colville P. Terrett, Major Reuben B. Turner.

Ninth Infantry—Colonel James Regan, Lieutenant-Colonel Edgar B. Robertson, Major Robert J. C. Irvine, Major Frank B. Jones, Major Charles R. Noyes.

Tenth Infantry—Colonel Charles H. Noble, Lieutenant-Colonel Edwin B. Bolton, Major Henry B. Moon, Major Lyman W. V. Kennon, Major Robert C. Van Vliet.

Eleventh Infantry—Colonel Albert L. Myer, Lieutenant-Colonel Daniel H. Brush, Major James B. Jackson, Major Pierce M. Travis, Major Richard M. Blatchford.

Twelfth Infantry—Colonel John W. Bubb, Lieutenant-Colonel Herbert S. Foster, Major Palmer G. Wood, Major Francis Fremont, Major George Bell, Jr.

Thirteenth Infantry—Colonel Alfred C. Markley, Lieutenant-Colonel Thomas C. Woodbury, Major Bernard A. Byrne, Major Alexis R. Paxton, Major William Black.

Fourteenth Infantry—Colonel Stephen P. Jocelyn, Lieutenant-Colonel George Le R. Brown, Major Charles McClure, Major William A. Mann (gen. staff), Major Francis E. Eltonhead.

Fifteenth Infantry—Colonel Henry C. Ward, Lieutenant-Colonel Edward B. Pratt, Major Charles St. J. Chubb, Major William Lassiter, Major Willis T. May.

Sixteenth Infantry—Colonel Butler D. Price, Lieutenant-Colonel Levin C. Allen, Major Francis H. French, Major Robert F. Ames, Major John Newton.

Seventeenth Infantry—Colonel John T. Van Orsdale, Lieutenant-Colonel George K. McGunnegle, Major James A. Maney, Major Edward Chynoweth, Major Frank B. McCoy.

Eighteenth Infantry—Colonel Charles B. Hall, Lieutenant-Colonel Walter S. Scott, Major William Paulding, Major George S. Young, Major Henry Kirby.

Nineteenth Infantry—Colonel Joseph T. Huston, Lieutenant-Colonel Frank Taylor, Major Silas A. Wolf, Major James B. Goe, Major Samuel W. Miller.

Twentieth Infantry—Colonel William S. McCaskey, Lieutenant-Colonel Alfred Reynolds, Major William T. Wood, Major James S. Rogers, Major Charles B. Hardin.

Twenty-first Infantry—Colonel Jacob Kline, Lieutenant-Colonel Cornelius Gardener, Major George Palmer, Major Lawrence J. Hearn.

Twenty-second Infantry—Colonel Henry Wygant, Lieutenant-Colonel Marion P. Maus, Major John J. Crittenden, Major Abner Pickering, Major John S. Parke, Jr.

Twenty-third Infantry—Colonel Philip Reade, Lieutenant-Colonel Charles L. Hodges, Major Henry H. Benham, Major Charles M. Truitt, Major Henry W. Hovey.

Twenty-fourth Infantry—Colonel James A. Buchanan, Lieutenant-Colonel John C. Dent, Major Zerah W. Torrey, Major Warren H. Cowles, Major Elias Chandler.

Twenty-fifth Infantry—Colonel John B. Rodman, Lieutenant-Colonel William H. W. James, Major William C. Buttler, Major Joseph M. T. Partello, Major Charles W. Abbott, Jr.

Twenty-sixth Infantry—Colonel Constant Williams, Lieutenant-Colonel George A. Cornish, Major Lorenzo W. Cooke, Major George F. Cooke, Major Charles J. T. Clarke.

Twenty-seventh Infantry—Colonel Samuel R. Whitall, Lieutenant-Colonel Richard Y. Yeatman, Major Jonas A. Emery, Major Charles R. Tyler, Major Edgar W. Howe.

Twenty-eighth Infantry—Colonel Owen J. Sweet, Lieutenant-Colonel William L. Pitcher, Major George H. Roach, Major Robert L. Bullard, Major Louis H. Strother.

United States Army Reorganization.

The beginning of the war with Spain, in 1898, found the United States with an army numbering only about 26,000 men, inelastic, defective in many important details and under an organization differing but little from the heritage left by the Revolution. Measures taken at once and money spent without stint strengthened it numerically until, at one period, there were about 275,000 soldiers, including volunteers, under arms. At the close of the war, and in connection with the subsequent experiences in the Philippines, it began to be very evident that to be prepared the United States needed an army which could be increased and decreased at will, without waiting for the comparatively slow action of Congress in time of need. A bill was drafted and presented to Congress, and, after consideration, made a law, giving the President, under certain conditions, discretion to increase or decrease the army between fixed limits—a maximum of 100,000 men and a minimum of 60,000, the latter the peace footing of the organization.

The renovation of the army began to be planned as far back as 1874, when General Emory Upton, appointed special commissioner to visit the armies of Europe, made his report to the War Department, to have it filed in the archives. Secretary of War Root dug up the ideas in this report, offered them to Congress, saw that they were made interesting and kept them so until they were incorporated into a law. There are five or six general features of the scheme by which the plan may be summarized. A three battalion formation for infantry as well as for cavalry and artillery, a general and systematic extension of military education, examination as a condition for promotion, interchangeable service in staff and line as opposed to permanent staff appointments, the establishment of a general staff and the increased efficiency of the national guard or militia.

The present enlisted strength of the army is 58,000 men, distributed between fifteen regiments of cavalry, an artillery corps and thirty regiments of infantry. Each regiment of cavalry has 516 privates, besides its quota of commissioned and non-commissioned officers and its band. Thirty batteries of field artillery and 126 batteries of heavy artillery constitute the artillery corps, each battery containing as many men as are needed for its service. The full strength of the corps will eventually be 18,920 men.

the increase to be made within two years, as fast as men can be trained for this form of the service. Under the old organization the artillery was divided into five regiments, scattered about the various coast defenses and army posts, so that the colonel of an artillery regiment might be in actual control of but a very small part of his command.

Each infantry regiment is composed of twelve companies, with forty-eight privates in every company. To place the army on a war footing it is but necessary to add 127 men to each company of infantry and 76 to each troop of cavalry, with a proportionate increase in non-commissioned officers.

For the sake of mobility the infantry regiments are divided into three battalions each, each battalion commanded by a major. This system, though prevailing in the cavalry and artillery for some time, was legally adopted for the infantry at the outbreak of the Spanish war. Such subdivision of the regiment adds to the effectiveness of an army under modern conditions, when "extended order" fighting is the rule, and the same number of men are made to cover much more ground than formerly.

The military academy at West Point, a poorly housed artillery school at Fortress Monroe, Va., an infantry and cavalry school at Fort Leavenworth, Kan., and an artillery and cavalry school at Fort Riley, Kan., were the only places for the instruction of army officers at the beginning of the Spanish war. By the plan mapped out by Secretary Root it was arranged for an improved, better housed and better equipped artillery school at Fortress Monroe, an engineer school of application at Washington, a school of submarine defense at Fort Totten, N. Y., a school of application for cavalry and field artillery at Fort Riley, an army medical school at Washington, a general service and staff college at Fort Leavenworth and a war college for the most advanced instruction at Washington.

Five officers detailed from the army and the chief of engineers, the chief of artillery and the commandant of Leavenworth College are to constitute the board of supervision of all the schools. The Leavenworth College and elementary officers' schools to be established at each military post will be open to the officers of the national guard of the States, to former officers of volunteers and to graduates of military colleges and schools which have army officers as instructors. Students will be sent to the War College from the Leavenworth school, only those who have especially distinguished themselves being given this honor.

The law providing for examinations for promotion was applied throughout the army in 1890. By it the President is authorized to prescribe a system of mental and physical examination for those below the rank of major who desire promotion. Special provision has been made for those entering the army from civil life either at the time of the war with Spain or the war between the States. A system for keeping a record of the services, efficiency and qualifications of all officers below the rank of colonel was inaugurated by Secretary Proctor and since elaborated until it is now a part of the promotion plan.

One of the greatest troubles with the army organization was felt to be the lack of co-operation between the heads of various departments. Until recently the United States army managed to get along with three general divisions—an administration corps, consisting of the Adjutant-General's and Inspector-General's Departments; a supply corps, consisting of the Quartermaster's, Subsistence and Pay Departments, and a third section formed of the Ordnance, Engineer, Medical and Signal services. Often staff officers were selected for political or personal reasons and were as often civilians as military men. Appointments were made for life. Since February, 1901, staff offices are to be filled by details of officers from the line wherever possible, and the staff detail is limited to four years. A second detail cannot be had until the officer has served two years in the line.

This system was but a partial solution of the difficulty, for the same lack of co-operation existed as before. In 1903 a bill was passed providing for a general staff, expected to bind the several branches into one organism, with responsibility concentrated in one officer—the Chief of Staff. The Chief of Staff takes the place of the General Commanding the Army, and becomes a working head instead of a passive body. The President, as Commander-in-Chief, gives the orders, the Chief of Staff sees that they are carried out, or explains why they have not been obeyed. The general staff, in case of war, becomes the War Board, the Board of Strategy to plan and direct campaigns, and is answerable directly to itself for success or failure.

Under the Chief of Staff is a group of officers selected from the line and staff of all branches of the service, whose duty it is to keep the Chief informed in all details of their several departments.

Lieutenant-General S. B. M. Young was chosen Chief of Staff, and on August 15 the General Staff began the new regime.

The new militia law was passed in January, 1903. It provided for the more complete equipment of this section of the service and the establishment of a closer relation and better co-operation between the National Guard and the regular army. This aims at the creation of a National Volunteer Reserve, a part of the general plan for an elastic army. The present strength of the organized militia is about 109,000 enlisted men and 9,000 officers.

PAY TABLE OF THE ARMY.

The pay of non-commissioned officers ranges from $15 to $46 per month; that of privates, from $13 to $23 per month, according to the years of actual service. Hospital stewards are paid from $45 to $55 per month; acting hospital stewards, $25 to $35 per month; cooks, $20 to $30 per month, and musicians from $17 to $70 per month. Clerks at military headquarters receive from $83.33 to $150 per month; nurses, $40 to $150 per month, while contract surgeons, dental surgeons and veterinarians are paid salaries that range from $125 to $210 per month.

Enlisted men who retire are entitled to three-fourths the monthly pay allowed in the grade they held at retirement, with commutation of clothing and rations at the rate of $9.50 per month. A certificate of merit entitles a soldier to $2 per month additional pay, continuing throughout all subsequent service.

ENLISTMENT CONDITIONS OF THE ARMY.

All persons applying for enlistment in the United States Army must be not less than eighteen nor more than thirty-five years of age. They must also be of good moral character, of temperate habits and be able to pass the necessary examination to show that they can speak, read and write the English language, and are able-bodied and free from disease. Persons who are under eighteen years of age, but who can meet all other requirements of the service, are accepted for enlistment if they can produce the written consent of parent or guardian.

The height and weight requirements are as follows:

For infantry and coast artillery, height not less than 5 feet 4 inches; weight, not less than 120 and not more than 190 pounds.

For cavalry and field artillery service the height must be over 5 feet 4 inches and under 5 feet 10 inches, while the weight must not be more than 165 pounds.

United States Military Academy.

Cadets for the military service of the United States receive practical and theoretical training therefor at the United States Military Academy, located at West Point, N. Y. Upon satisfactory completion of its course cadets are eligible for promotion and commission as Second Lieutenants in any arm or corps of the army in which there may be a vacancy which they have been judged competent to fill.

Each Congressional District and each of the Territories is entitled to have one cadet at the academy; each State is entitled, in addition, to two appointed at large, and forty are appointed from the country at large. In the case of those appointed from the Congressional districts the appointments are made on recommendation of the Congressional representative or delegate; cadets at large from States are appointed on recommendation of the respective Senators from those States; and those from the country at large and the District of Columbia are selected by the President on his own responsibility. Each appointee, except in the case of the last class mentioned, must be an actual resident of the State, District or Territory from which the appointment is made.

APPOINTMENT TO WEST POINT.

Appointments must be made one year in advance of the date of admission, except when, through death or otherwise, a vacancy occurs which cannot be provided for by such appointment in advance. These vacancies are filled in time for the next examination. For each candidate appointed two alternates may be named.

The academic duties and exercises commence on the 1st of September and continue until the 1st of June following. Examinations of the classes are held in December and June; and from the termination of the examinations in June, until the end of August, the cadets live in camp, engaged in military duties and exercises, receiving military instruction only. Each cadet is allowed $500 per annum and one ration per day, or commutation therefor at 30 cents per day, making the total pay $609.50 per annum, commencing with admission to the academy. The actual and necessary travelling expenses of candidates from their homes to the academy are credited to their accounts, if they succeed in entering, after they become cadets. No cadet is permitted to receive money or any other supplies from parents or friends. Except in extreme cases cadets are allowed but one leave of absence during the four years' course, and as a rule this leave is granted at the end of the first two years' course of study.

GROWTH OF THE ACADEMY.

West Point has been occupied as a military post continuously since January 20, 1778. Prior to this, on October 1, 1776, Congress passed a resolution appointing a committee to prepare a plan for "A Military Academy at the Army." As a result, a resolution was passed on June 20, 1777, providing for a Corps of Invalids "to serve as a military school for young gentlemen previous to their being appointed to marching regiments," and such a corps was organized in July following. At Washington's request in 1781 the corps was marched from Philadelphia to form part of the garrison at West Point. After the cessation of hostilities in 1783 Washington laid the matter of a military academy before his officers at Newburg, and it was referred to in his message of December 3, 1793. There were already at West Point an engineer school, a laboratory and a library occupying three separate buildings, these existing there when the Invalid Corps went thither in 1781. By a law approved May 9, 1794, the organization was authorized of a Corps of Engineers and Artillerists with two "cadets" to each company, this being the creation of the grade of "cadet" in the American army. A school for the new corps was established at West Point during the same year, but the destruction of its building by fire in 1796 caused its suspension. On July 20, 1801, the Secretary of War directed that all the cadets of the Corps of Artillerists should report at West Point for instruction, and on September 1, that year, a school was opened with four army officers and a civilian as administrators and instructors. Washington was indefatigable in his advocacy of a military academy and the Act of Congress authorizing its creation was approved March 16, 1802. West Point was designated for its location and the academy, with ten cadets present, was formally opened July 4, 1802. The institution underwent a number of vicissitudes, and in March, 1812, it was without a single instructor. Up to that time eighty-eight cadets had been graduated. They had entered without mental or physical examination, at all ages from 12 to 34, and at any time of the year. By Act of Congress of April 29, 1812, the academy was reorganized upon principles which underlie its present organization, and its progress has been steady and gratifying.

From 1802 until 1902 inclusive the academy graduated 4,121 men. The present authorized number of cadets is 481, and the number of instructors is 81.

INSTRUCTION AT WEST POINT.

The course of instruction is largely mathematical and professional. The principal studies are mathematics, drawing, natural and experimental philosophy, chemistry, chemical physics, mineralogy, geology, electricity, history; international, constitutional and military laws; the French and Spanish languages, drill regulations of all arms of the service, civil and military engineering, the art and science of war, and ordnance gunnery. The academy is under the superintendency of Colonel Albert S. Mills, U. S. A., who has a military staff. The academic staff is composed entirely of army officers, and includes professors, assistant professors and instructors in each of the several departments into which its curriculum is divided.

Under new regulations which placed the examinations for entrance to the Military Academy under the control of the Secretary of War, the institution entered upon the second century of its history with the promise of rendering more efficient service than ever in the preparation of young men for the discharge of duty as officers in the army. New requirements met candidates for admission in 1902, and one of the demands was for a higher standard of qualification. As now provided the examinations are limited to one in each year, to be held on the 1st of May. While entrance has thus been made more difficult, to the future advantage of the service, the way of aspiring young men has been made somewhat easier, in one respect, by the provision for holding the examinations at a largely increased number of military posts. In addition to this the generally higher standard of qualifications does not increase the amount of mental work required of the new cadet before he has adapted himself thoroughly to the academy's methods. As a matter of fact a considerable reduction in this work is one of the benefits which is expected to result from the amended system.

CHANGE IN THE REGULATIONS.

Another change which went into effect during the year is intended to guard against the creation of vacancies caused by the failure of both the appointee and his alternate to pass the necessary examinations and secure admission. In the future two alternates, instead of one, will be named with each principal nominated by a representative in Congress. It is proposed now that candidates may be admitted to the academy on certificates of educational qualification, so far as the mental examination is concerned, such certificate to be based either upon their success in a competitive examination preceding the appointment, or upon graduation from a public high school of the proper standard, or upon the fact that the candidate is a regular college or university student. This plan is credited with possessing strong merit, especially in the benefit a candidate would derive from it in being able, from the date of his appointment, to devote his energies to preparing for the course he is to take up, without giving time to further pursuit of studies wherein he has been declared proficient. Another suggestion which has been officially made is that the course at West Point could be advantageously modified to allow cadets who expect to enter the infantry and cavalry to elect a course in their last year similar to that of the special service school at Fort Leavenworth.

The Navy of the United States.

The active list of the United States Navy comprises 2,001 commissioned and warrant officers and 28,171 enlisted men. There are 304 vessels in the regular navy, and 56 in the auxiliary navy, making a grand total of 305 vessels, only 15 of which are unfit for sea service.

Lieutenants (junior grade), Navy	1,500	1,275	.....				

*All wages and salaries quoted are for the period immediately succeeding enlistment. The increase in pay of each position is graded in accordance to the year of service.

The monthly pay of petty officers and enlisted men is as follows: Chief petty officers, $50 to $70; petty officers, first class, $36 to $65; petty officers, second class, $35 to $40; petty officers, third class, $30; seamen, first class, $21 to $35; seamen, second class, $15 to $30; seamen, third class, $9 to $22.

The monthly pay of stewards ranges from $35 to $45; of cooks, $25 to $55; and mess attendants, $16 to $24. The salary of the secretary to the Naval Academy is $1,800 per annum, and the salaries of the clerks at the various shore stations range from $1,000 to $1,800 per annum.

Non-commissioned officers in the Marine Corps receive from $15 to $35 monthly; musicians from $50 to $125 monthly, while the pay of privates is $13 a month.

ENLISTMENT IN THE NAVY.

Applicants for enlistment in the United States Navy must be over eighteen years of age, of American citizenship and capable of reading and writing English. The term of enlistment is four years, but no person will be accepted until he has first passed the medical examination prescribed by the regulations.

No minor under the age of eighteen years will be accepted without the consent of parent or guardian, and any such minor claiming to be more than eighteen years of age in order to secure enlistment is liable to punishment.

United States Naval Academy.

A school for the training of young men to serve as officers in the United States Navy was opened in 1845, following the plans of Hon. George Bancroft, Secretary of the Navy during the administration of President Polk. The course at that time consisted of five years, of which the first and last were spent at the school, the intervening three being passed at sea. The first class graduated in 1846. A reorganization of the institution was made in 1850, the name then becoming the United States Naval Academy, and its management being placed under the supervision of the Bureau of Ordnance and Hydrography. The course of study was then extended to seven years. In 1861 the academy was transferred to Newport, and returned to Annapolis at the close of the civil war, in 1865. In 1851 the three years sea service was abandoned, and the course made four years, to be changed to six years in 1873, when the administration of the school was placed directly under the Navy Department.

As at present arranged the curriculum includes seamanship, ordnance and gunnery, navigation, marine engineering, naval construction, mathematics, physics, chemistry, mechanics, English, modern languages, physiology and hygiene and law.

SUMMARY OF VESSELS IN THE UNITED STATES NAVY.

VESSELS FIT FOR SERVICE.

The following are the vessels that are fit for service, including those under repair:

Class.	Number.
First class battle ships	10
Second class battle ship	1
Armored cruisers	2
Armored ram	1
Single-turret harbor defense monitors	4
Double-turret monitors	6
Protected cruisers	14
Unprotected cruisers	3
Gunboats	12
Light-draft gunboats	3
Composite gunboats	6
Training ship	1
Special class	2
Gunboats under 500 tons	21
Torpedo boat destroyers	16
Steel torpedo boats	29
Submarine torpedo boats	8
Wooden torpedo boat	1
Iron cruising vessels, steam	5
Wooden cruising vessels, steam	6
Wooden sailing vessels	4
Tugs	39
Auxiliary cruisers	5
Converted yachts	23
Colliers	16
Supply and hospital ships	14
Total	252

VESSELS UNDER CONSTRUCTION OR AUTHORIZED.

The following vessels are either in process of construction or are authorized:

Class.	Number.
First class battle ships	14
Armored cruisers	8
Protected cruisers	9
Gunboat for Great Lakes	1
Composite gunboats	2
Steel torpedo boats	6
Training ships	2
Training brig	1
Tugs	2
Total	45

VESSELS UNFIT FOR SEA SERVICE.

The following vessels, while unfit for sea service, still remain a part of the equipment of the United States Navy:

Class.	Number.
Iron single-turret monitors	5
Wooden cruising vessels, steam	10
Wooden sailing vessels	8
Total	23
Grand total	320

All war ships owned by the United States, under the requirements of law, are built within the country and of home materials. At the outbreak of the Spanish war, however, the Albany and New Orleans, formerly the Abreu and the Amazonas, were authorized to be bought in England from Brazil, and some other vessels were acquired in the same way.

Among the most interesting of the vessels of regular type in the United States Navy are the commerce destroyers Columbia and Minneapolis, sister ships. On their official trials off the coast of Massachusetts they developed an average speed of 22.81 and 23.07 knots respectively. Each is 412 feet long with 58 feet beam, and has a displacement of 7,375 tons. There is a double bottom and protective deck which rises from 4½ feet below the water line to 1 foot above amidships, except at the bow and stern, where it slopes down below the water line. The protective deck is 4 inches thick on the slopes and 2½ inches thick elsewhere. A wall of patent fuel 5 feet thick protects the boilers. There are three sets of engines, each driving its own screw and each set in a separate watertight compartment.

The Indiana, Massachusetts and Oregon are practically identical. The armor belt is 17 inches thick and 7½ feet wide, extending over 56 per cent of the whole length, from 4½ feet below the water line to 3 feet above. Above this belt is another 5 inches thick. The Iowa is of the same type, except that she carries smaller guns and has her forecastle carried one deck higher than in the other ships.

The Kearsarge and Kentucky differ from their sister ships, the Alabama, Wisconsin and Illinois, in having superimposed turrets carrying 8-inch guns over the larger turrets carrying 13-inch guns.

The New York and Brooklyn are the largest of the cruisers. The Brooklyn has sides tumbling home, after the French fashion, while the New York has wall sides. The Brooklyn also has a higher forecastle, raising her forward turret one deck higher than the after one.

The New York has a heavily-armored steel deck, besides light side-plating and a cellulose belt. She made 20.6 knots after seven years' service.

The ram Katahdin is unlike any other war vessel. She was designed by Admiral Amman. She has a small secondary battery and depends for offensive force upon her ability to ram a foe. For this service she is built so that only the turtle-back, covered with 6-inch Harveyized steel, shows above water. The funnel, ventilating shafts and cononing towers are heavily armored. No opportunity to try her has ever offered.

The turret guns on the second-class battle ship Texas were placed so that they might be trained through an arc of 270 degrees, each gun firing from ahead to astern on its own side and 50 degrees forward and abaft of the beam. The turrets are placed en echelon and their bases and supports are sheltered within an oblique redoubt, as in some of the Italian ships. The guns may be loaded in any position of training.

Ships of the new type—the Vermont class—are to carry 12-inch and 8-inch guns for their heavier armament. The projected cruisers will be second-class battle ships in all but name.

The vessels that are now unfit for service are put to other uses.

Wooden steam vessels—Fern, naval militia service; Franklin,, receiving ship; Iroquois, marine hospital service; Marion, naval militia service; Minnesota, naval militia service; Nipsic, receiving ship; Omaha, marine hospital service; Pensacola, naval training ship; Richmond, receiving ship; Wabash, receiving ship, and Yantic, naval militia service.

Wooden sailing vessels—Constitution, built in 1797, preserved as a relic at the Boston Navy Yard; Dale, naval militia service; Independence, receiving ship; New Hampshire, naval militia service; St. Louis, naval militia service, and Vermont, receiving ship.

STEEL, IRON AND WOODEN STEAM TUGS.

The thirty-nine tugs in the United States Navy are—Accomac, Active, Alice, Apache, Chickasaw, Choctaw, Fortune, Hercules, Iroquois, Iwana, Leyden, Massasoit, Modoc, Mohawk, Narkeeta, Nezinscot, Nina, Osceola, Pawnee, Pawtucket, Penacook, Piscataqua, Pontiac, Potomac, Powhatan, Rapido, Samoset, Sebago, Sioux, Standish, Tecumseh, Traffic, Triton, Unadilla, Uncas, Vigilant, Waban, Wahneta and Wompatuck.

The standard boats in use in the regular navy of the United States are:

Type of boat.	Length, extreme.	Breadth, extreme.	Depth from top of gunwale to lower edge of rabbet.	Weight. Hull.	Weight. Total, including outfit.	Maximum number of men boat will carry.	Weight of provisions and water.	Corresponding freeboard.	Sail area.	Area of load water plane of service condition.

Naval Militia of the United States.

(Compiled by the Navy Department.)

The Naval Militia bodies of the various States and of the District of Columbia are composed as follows:

State.	Officers.	Petty Officers and Enlisted Men.	State.	Officers.	Petty Officers and Enlisted Men.
California	36	380	New Jersey	32	322
Connecticut	20	185	New York	57	585
District of Columbia	10	162	North Carolina	27	219
Florida	4	48	Ohio	22	234
Georgia	17	111	Oregon	9	115
Illinois	56	575	Pennsylvania	9	64
Louisiana	23	327	Rhode Island	12	181
Maine	3	46	South Carolina	24	224
Maryland	18	221			
Massachusetts	39	497	Total	435	4,679
Michigan	17	183			

The following table shows the allotment to each State, in conformity with the regulations of the Department:

State.	Allotment.	State.	Allotment.
California	$4,846.90	New Jersey	$4,107.11
Connecticut	2,359.68	New York	7,461.67
District of Columbia	2,066.31	North Carolina	2,793.34
Florida	612.24	Ohio	2,984.67
Georgia	1,415.81	Oregon	1,466.83
Illinois	7,334.12	Pennsylvania	816.32
Louisiana	4,170.88	Rhode Island	2,308.66
Maine	586.73	South Carolina	2,857.12
Maryland	2,818.85		
Massachusetts	6,339.23	Total	$59,680.64
Michigan	2,334.17		

Pension Bureau Statistics.

As a result of the various wars in which it has been engaged, the United States Government has at the present time a list of nearly one million persons to whom it pays annual pensions. This army of pensioners includes survivors of all the wars, excepting, of course, the War of the Revolution, soldiers and sailors who are in receipt of service pensions granted for service rendered prior to 1858, together with the widows of soldiers and sailors, for whom provision is made under certain conditions. The exact number is 996,545, of which number 4,709 reside outside of the United States. The total expenditure in pensions during the fiscal year was $137,759,653. Since the pension system was established it has cost the Government a total of $3,037,826,081, an amount which is exclusive of the cost of establishing Soldiers' Homes. The Bureau employs a force of 1,734, which, with the employes of the agencies, 431 in number, makes a total of 2,167. The total cost of administration during the year 1902-1903 was $3,993,216. More than one-half of the pensions paid are $10 per year or less, and the average value of all pensions allowed is $133.49. The number of applications for pensions examined during the year was 226,902.

PENSION GAINS AND LOSSES.

The fiscal year ending June 30, 1903 shows the following gains in the number of persons listed on the pension roll:

Gain by act of the bureau	44,256
Gain by special act of Congress	231
Total	44,487

There has been lost from the rolls the following number of pensioners during the same time for causes as follows:

By death	40,907
By remarriage	1,152
By legal limitation (minors)	1,392
By failure to claim	2,791
For other causes	1,146
Total	47,388

THE PENSION ROLLS.

The number of pensioners upon the rolls July 1, 1903, and for the five preceding years respectively is as follows:

Wars.	1903.	1902.	1901.	1900.	1899.	1898.
War, Revolutionary—						
Widows	2	4	4	4	4	5
Daughters	3	4	5	7	7	7
War 1812—						
Survivors	1	1	1	1	1	3
Widows	1,115	1,317	1,527	1,742	1,998	2,407
Indian wars—						
Survivors	1,565	902	1,086	1,370	1,656	2,019
Widows	3,169	3,320	3,479	3,739	3,899	4,067
Mexican War—						
Survivors	5,964	6,828	7,568	8,352	9,204	10,012

Patent Office Statistics.

Following are the statistics of the business transacted by the United States Patent Office for the year ending June 30, 1903:

THE ANNUAL REPORT.

Receipts for the year, $1,591,251; expenditures, $1,591,251; balance on hand, $168,157; number of applications for mechanical patents, 49,199; number of applications for patents for designs, 801; number of applications for reissue of patents, 156; number of caveats filed, 1,767; number of applications for trade marks, 2,530; number of applications for labels, 1,208; number of applications for prints, 362; number of patents granted 29,329; number of design patents granted, 438; number of reissues granted, 125; number of trade marks registered, 2,194; number of labels registered, 910; number of prints registered, 233; number of patents expired during the year, 23,390; number of patents withheld for non-payment of fees, 4,760; number of applications allowed, awaiting payment of final fees, 10,854.

The Commissioner reported that the business of the Patent Office was greater this year than ever before, and he presented the following table to illustrate the character of its growth:

THE TRANSACTIONS OF 1899 AND 1903.

Class.	1899.	1903.	Increase.	Percentage of Increase.
Receipts	$1,209,554.88	$1,591,251.04	$391,691.16	32.4
Expenditures	1,148,663.48	1,423,094.40	274,430.92	23.9
Applications and caveats filed	41,930	56,023	14,093	33.6
Letters patent, design and reissue patents granted, and trade marks, labels and prints registered	25,404	33,229	7,825	30.8
Printed copies of patents furnished	1,363,971	1,914,249	550,278	40.3
Price received	$49.681.37	$64,907.01	$15,225 64	30.6
Words written in copies of records furnished	13,899,700	18,589,700	4,690,000	33.7
Number of employes	668	722	54	8

The following comparative statement indicates the record of business from 1894 to 1903:

June 30.	Receipts.	Expenditures.	June 30.	Receipts.	Expenditures.
1894	$1,183,523.18	$1,053,962.38	1899	$1,209,554.88	$1,148,663.48
1895	1,195,557.07	1,038,166.08	1900	1,358,228.35	1,247,827.58
1896	1,367,090.30	1,097,368.85	1901	1,408,877.67	1,288,970.13
1897	1,343,779.44	1,088,473.16	1902	1,491,538.85	1,329,924,63
1898	1,253,948,44	1,092,449.83	1903	1,591,251.04	1,423,094.40

THE STATUTORY AMENDMENT.

By act of Congress approved March 3, 1903, four sections of the Revised Statutes relating to the business of this office were amended. The changes introduced by amendment were, in effect, as follows:

Section 4887 was amended so as to give effect to the International Convention for the Protection of Industrial Property. This amendment, furthermore, extended the period within which an application for a patent could be filed in this country after an application abroad from seven months to twelve months.

Section 4892 was amended to require the authority of foreign officers administering oaths to applicants for patents to be proved by a certificate of a diplomatic or consular officer of the United States.

Section 4896 was amended so as to permit a foreign administrator of a deceased foreign inventor to file an application in this country upon the authority of such foreign administrator being proved by a certificate of a diplomatic or consular officer of the United States.

Section 4902 was so amended as to permit foreigners, as well as citizens of this country, to file caveats.

PATENTS ISSUED TO CITIZENS OF THE UNITED STATES, EACH CENSUS YEAR, 1840-1900.

United States Secret Service.

John E. Wilkie, Chief of the United States Secret Service, has reported to the Secretary of the Treasury that the number of arrests made by the duly qualified agents of his department at the close of the fiscal year ending June 30, 1903, were 424. The offenses alleged were as follows:

Manufacturing, having in possession, dealing in, passing, and attempting to pass counterfeit paper money	38
Altering obligations of the United States, having in possession, passing, or attempting to pass altered obligations	46
Manufacturing, passing, and having in possession and passing counterfeit silver coin	244
Manufacturing, passing, and having in possession and passing counterfeit minor coin	23
Violating section 5459, United States Revised Statutes	4
Violating section 5482, United States Revised Statutes	1
Violating section 5480, United States Revised Statutes	3
Violating section 5479, United States Revised Statutes	1
Violating section 5414, United States Revised Statutes	3
Violating section 5438, United States Revised Statutes	3
Violating section 5392, United States Revised Statutes	3
Violating section 5415, United States Revised Statutes	1
Bribery	1
Violating sections 5424 and 5440, United States Revised Statutes	46
Violating bankruptcy laws	2
Impersonating United States Government officer	2
Perjury	3
Total	424

Of those arrested as above, 199 were convicted, 63 are awaiting the action of the court, 71 are awaiting the action of the United States grand jury, 39 were acquitted, 38 were ignored by the United States grand jury, 9 were nolled, 3 were discharged by the United States Commissioner, 1 was held as a witness, and 1 died while awaiting trial.

The nativity of persons arrested was as follows:

United States	293	Wales	2
Italy	78	Canada	2
Germany	9	Syria	2
Ireland	7	Sweden	2
Mexico	6	Austria	2
Russia	6	England	1
France	4	Norway	1
China	3		
Greece	3	Total	424
Poland	3		

The 93 cases which were undetermined at the close of the previous year were disposed of as follows: Convicted, 66; acquitted, 17; nolled, 4; not indicted, 6.

The following statement shows the character and representative value of altered and counterfeit notes; also counterfeit coins and imitation money captured and secured by the Secret Service agents during the year:

COUNTERFEIT MONEY.

Description.	Value.
United States notes	$5,299.00
Treasury notes	873.00
National bank notes	5,207.00
United States silver certificates	2,488.00
Altered notes	1,540.00
Fractional currency	434.65
Foreign notes	170.25
Gold certificates	200.00
Total	$16,211.90

Description.	Value.
Gold coins	$1,929.50
Silver coins	12,598.49
Nickel coins	333.94
Copper coins	516.84
Mexican coins (silver)	5.00
Spielmarks	60.00
Foreign coins	35.34
Total	$15,479.11

THE HISTORY OF THE SERVICE.

The following table presents a comparative statement of the business transacted by the division since 1890:

Year.	No. of Arrests.	Amount of Counterfeit and Altered Notes Captured.	Amount of Counterfeit Coins.	No. of Plates.	No. of Dies.	Number Molds.
1890	346	$26,405.17	$5,619.37	154	77	81
1891	429	2,155,095.35	5,336.01	272	[1]112	
					[2]13	84½
1892	524	29,441.40	7,676.15	693	[1]201	
					[2]44	243
1893	494	22,108.15	8,591.29	491	[1]9	
					[2]9	153½
1894	687	13,942.50	10,756.46	134	[1]14	
					[2]19	156½
1895	803	27,428.60	7,092.28	935	47	217½
1896	780	757,531.50	10,678.93	339	[1]50	
					[1]1	228
1897	842	438,866.60	13,980.15	187	[1]21	
					[2]3	353

OTHER WORK OF THE DIVISION.

During the past year there has been comparatively little annoyance, so far as the public is concerned, in the matter of counterfeit coin. A number of schemes for the circulation of base-metal coins have been suppressed, and an inspection of the comparative table will show that the number of molds captured is largely out of proportion to the quantity of counterfeit coin removed from circulation. This is due to the fact that in many instances it has been possible to raid the workshops of the counterfeiters before they had succeeded in floating any considerable quantity of their product. There has been a continued and satisfactory decrease in the number of "all silver" counterfeits appearing in the larger cities, and there is no evidence of any new enterprises along this line. Such coin as is now being received is the product of organizations broken up in previous years.

Descriptive matter of nine new counterfeit notes were sent out by the Secret Service Division during the fiscal year, rather as a matter of record than as a precautionary measure, for none of the issues could be considered as belonging to the "dangerous" or "deceptive" class of work. Five of the nine were plain photographic prints of the crudest character, in which it was evident that the makers were not skillful photographers. One note was lithographed, and, while coarse and blotchy, might have been accepted by extremely careless or ignorant persons. One was a woodcut bearing only a general resemblance to the genuine issue, and two were printed from roughly etched zinc plates. The makers and passers of four of the spurious obligations were arrested and their stocks of bills and negatives captured within a short time after the enterprises were launched, and it is doubtful if more than a score of any of the new counterfeits found their way into circulation.

On July 11, 1902, a $20 gold certificate and a $5 silver certificate were reported, both being crude photographic prints. The makers were arrested and their plant captured. On October 17 a $10 United States note of inferior lithographic work. Only three were found in circulation. On December 10 a $20 gold certificate, crudely photographed. On March 24, 1903, a $2 silver certificate printed from photo-etched plates on stiff paper. March 30 a $5 silver certificate printed from roughly-etched plates and a $5 national bank note on the "Citizens' International Bank" of New York, which has no existence. This note was a wood cut, made by a poor workman, and resembled the genuine only slightly.

That the identification branch of the service may be as perfect as possible, the Bertillon system has been adopted, and complete apparatus is being installed at the headquarters of each of the twenty-five districts into which the country is divided. One expert instructor has had charge of the training of the agents of the service, and when through with his work there will be a corps of Bertillon operators, with a uniformity of method that should secure the best results in the application of this well-known form of criminal identificaton. The installation will be completed by the end of the present calendar year.

The investigation of the disappearance of $30,000 in gold from the cashier's vault at the San Francisco mint was concluded, and Walter N. Dimmick, chief clerk and former cashier, was convicted on the third trial and sentenced to five years' imprisonment.

The Clearing House Association of Detroit took action in January which was expected to aid the division in suppressing counterfeit notes and coins, and which has since been adopted by other Clearing House Associations in different parts of the country. While a bank was required to refuse and report any counterfeits presented for deposit, there had formerly been no uniform method of marking these counterfeits so they might not be offered a second time. The circulation of the product of one group of counterfeiters in Detroit started the agitation which resulted in the following resolutions:

Resolved, That the following provisions, being those of the act of Congress of June 30, 1876 (part of section 3583 of the United States Compiled Statutes of 1901), viz, "That all United States officers charged with the receipt or disbursement of public moneys and all officers of national banks shall stamp or write in plain letters the word 'counterfeit,' 'altered,' or 'worthless' upon all fraudulent notes issued in the form of and intended to circulate as money, which shall be presented at their places of business; and if such officers shall wrongly stamp any genuine note of the United States or of the national banks, they shall, upon presentation, redeem such notes at the face value thereof," are hereby constituted a rule to be strictly observed by all members of this association and all banks and bankers clearing through them, provided that when the word "counterfeit" is used the letters thereof shall be formed by a series of holes punched through such notes by a perforating apparatus, such letters to be not less than three-quarters of an inch in height; and provided that whenever defacement of any note is made under this rule the name of the bank making the same shall be plainly stamped, written, or perforated thereon; and

Further resolved, That all spurious coins coming into the hands of the members or non-members as above shall be defaced by legibly indenting the word "bad" on both sides thereof with a steel punch; and

Further resolved, That this rule shall apply also to fraudulent Canadian coin and Government or bank notes.

Table of Magnetic Declinations,

Or Compass Variations for January 1, 1904, with the Annual Change for the Period 1900-1905, for Various Places in the United States.

For all the compact part of the United States, Alaska and Porto Rico, east declination is decreasing and west declination is increasing; in Hawaii and the Philippine Islands, however, east declination is increasing. The geographical positions are approximate and refer to the point of observation. (Prepared expressly for The American Almanac by Professor Louis A. Bauer, Chief of the Magnetic Division of the United States Coast and Geodetic Survey.)

Labor Legislation.

Revised by G. WALLACE W. HANGER, Chief Clerk United States Department of Labor.

ANTI-BOYCOTTING AND ANTI-BLACKLISTING LAWS.

Boycotting is prohibited by law in Colorado, Illinois and Indiana.

Blacklisting is prohibited by law in Colorado, Connecticut, Florida, Illinois, Indiana, Iowa, Kansas, Minnesota, Missouri, Montana, Nevada, North Dakota, Oklahoma, Texas, Utah, Virginia, Washington and Wisconsin.

Laws which may be construed as prohibiting boycotting exist in Alabama, Connecticut, Florida, Georgia, Maine, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, New Hampshire, New York, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah and Vermont.

Laws which may be construed as prohibiting blacklisting exist in Georgia, Michigan, New Hampshire, New York, Oklahoma, Oregon, Rhode Island and South Dakota.

In California, Colorado, Connecticut, Idaho, Indiana, Kansas, Massachusetts, Minnesota, Missouri, New Jersey, New York, Ohio, Pennsylvania, Porto Rico and Wisconsin it is unlawful for an employer to exact an agreement, either written or verbal, from an employe not to join or become a member of any labor organization as a condition of employment.

EIGHT-HOUR LAWS.

Arkansas.—Eight hours constitute a day's labor on public roads, highways and bridges.

California.—Unless otherwise expressly stipulated by the parties to a contract, eight hours constitute a day's labor. On any public works of or work done for the State, or any political sub-division thereof, eight hours constitute a day's work for all laborers, workmen and mechanics. A stipulation that neither of the above-mentioned classes shall be required or permitted to work more than eight hours a day must be contained in every contract to which the State or any of its political sub-divisions is a party.

Colorado.—For all workmen employed by the State or any sub-division thereof, and for workingmen in all underground mines or workings and in smelting and refining works, eight hours constitute a day's work.

Connecticut.—Unless otherwise agreed, eight hours constitute a lawful day's work.

District of Columbia.—For all laborers or mechanics employed by or in behalf of the District eight hours is a day's work.

Idaho.—On all State, county and municipal work eight hours constitute a day.

Illinois.—Except on farms and when otherwise agreed, eight hours is a day's work in all mechanical employments. This does not apply to service by the day, week or month. Eight hours constitute a day's labor for persons assessed to work on public highways.

Indiana.—For all classes of mechanics, workingmen and laborers, except those engaged in agriculture or domestic labor, eight hours constitute a day's work. Overwork by agreement and for extra pay is permitted. More than eight hours for a day's work is absolutely prohibited for persons under fourteen years of age.

Iowa.—Eight hours constitute a day's labor on public roads.

Kansas.—For all laborers, mechanics or other persons employed by the State or any political subdivision thereof eight hours constitute a day's work.

Maryland.—No mechanic or laborer employed by or on behalf of the city of Baltimore shall be required to work more than eight hours a day, except employes of the Fire Department, Bay View Asylum or the city jail.

Massachusetts.—For all laborers, workmen and mechanics employed by or in behalf of any city or town in the Commonwealth eight hours shall constitute a day's work, if adopted by ballot at an annual election in the city or town.

Minnesota.—Laborers, workmen and mechanics on public works are restricted to eight hours' labor on any calendar day.

Missouri.—A legal day's work consists of eight hours. This, however, may be modified by agreement, and does not apply to those engaged in agriculture. It is unlawful for employers to work their employes longer than eight hours per day in mines.

Montana.—A legal day's work consists of eight hours for persons engaged to operate or handle any first-motion or direct-acting hoisting engine or any geared or indirect-acting hoisting engine at any mine employing fifteen or more men underground, when the duties of firemen are performed by the person so engaged; also for any engineer operating a stationary engine developing fifty or more horse-power, when such engineer has charge or control of a boiler or boilers in addition to his other duties. The law applies only to such steam plants as are in continuous operation or are operated sixteen or more hours in each twenty-four, and does not apply to persons running any engine more than eight hours in each twenty-four for the purpose of relieving another employe in case of sickness or other unforeseen cause. It is unlawful to work employes in underground mines and workings and in smelting and refining works longer than eight hours in one day. Eight hours constitute a day's work on public roads and highways.

Nebraska.—Eight hours constitute a day's work on public roads.

New Mexico.—Eight hours constitute a day's labor on the public highways.

New York.—For all classes of employes, except in farm or domestic work, eight hours constitute a day; overwork for extra pay is permitted, except on work for or by the State or a municipal corporation. The law applies to those employed by or for the State or a municipality, and every contract to which either of these is a party must contain a stipulation that no workman, laborer or mechanic shall be permitted or required to work more than eight hours in any one day, except in cases of extraordinary emergency.

Ohio.—In all engagements to labor in any mechanical, manufacturing or mining business, unless otherwise expressly stipulated, eight hours constitute a day's work, except in case of conductors, engineers, firemen and trainmen of railroads, where it is ten.

Oregon.—Eight hours constitute a day's labor on public roads.

Oklahoma.—Eight hours constitute a day's labor on public highways.

Pennsylvania.—In all cases of service by the day, unless there is an agreement to the contrary, eight hours shall constitute a day's work. This does not apply to farm or agricultural labor or service by the year, month or week. Eight hours constitute a legal day's work for mechanics, workmen and laborers in the employ of the State or any municipal corporation, or otherwise engaged on public work.

Porto Rico.—No laborer may be compelled to work more than eight hours per day on public works.

Tennessee.—Upon the highways eight hours is a day's work.

Texas.—Eight hours constitute a day's work on public highways.

Utah.—On all public works and in all underground mines or workings, smelters and all other institutions for the refining or reducing of ores eight hours is a day's work.

Washington.—On all public works eight hours make a day, except that in cases of emergency overtime may be worked for extra pay.

West Virginia.—In the case of all laborers, workmen and mechanics employed by or for the State eight hours constitute a day's work.

Wisconsin.—Where there is no agreement to the contrary a day's work shall consist of eight hours in all engagements to labor in any manufacturing or mechanical business. Children under eighteen years of age and women may not be compelled to work over eight hours a day. Eight hours constitute a day's labor on public highways.

Wyoming.—In all mines and all State and municipal work eight hours constitute a day's work.

United States.—All laborers, workmen and mechanics employed by or on behalf of the national Government are required to work but eight hours a day.

[1]Including custom work and repairing. [2]Including wheelwrighting. [3]Cars and general shop construction and repairs by steam railroad companies. [4]Shops not included in those operated by steam railroads. [5]Including condensed milk. [6]Including dressmaking. [7]The factory product. [8]From fiber other than wood. [9]Including meat packing, but not retail butchering.

Permanent Census Bureau.

The United States Census Bureau is now established as a permanent adjunct to the Government machinery, and in the future it will be possible for citizens to keep posted at all times on matters pertaining to the material condition of the country. The office is under the control of a permanent chief, who is not dependent upon political influence for the retention of his position, and is not removable except for cause.

Under Constitutional provisions a census of the entire country is required to be taken every decade. In the early years of the Government a census was construed to mean an enumeration of the population, and in the beginning the work of gathering such statistics was a simple matter. As the country grew in population and area it was found that the field of statistics also expanded, and it was deemed desirable to gather information bearing upon the social and financial condition of the people. As the work increased and its value became more and more appreciated the facilities for gathering such information were found insufficient. Temporary quarters for census work were opened in Washington; temporary officials were obliged to employ temporary clerks, enumerators and tabulators. Every ten years it was necessary to recruit and train a new army of inexperienced men for census work, with the result that in many instances the work done in some departments was worthless, costing the Government large sums of money to no purpose and depriving the people of much valuable information which they desired to obtain.

The need of a permanent census bureau was first urged upon the country by General Francis A. Walker, director of the ninth and tenth censuses, in 1888. General Walker pointed out the difficulties under which the bureau labored, and showed by logical argument the impossibility of obtaining satisfactory results from a corps of men engaged without special reference to their fitness for the work, but half of whom might be found to be incompetent when it was too late to change the staff. The subject was then agitated in Congress and throughout the country, and, finally, in March, 1902, fourteen years after General Walker first suggested the idea, Congress established the Census Office as a permanent institution, with Census Commissioner W. R. Merriam in charge of its administration and a corps of officials in charge of departments.

By the bill creating the permanent bureau it was made the duty of the Census Office to collect statistics of manufactures decennially, beginning with 1905; to collect statistics of cotton production annually, and to publish weekly bulletins thereon from September to January inclusive; to collect statistics of births and deaths annually from such States and municipalities as furnish satisfactory records; to issue before July 1, 1904, a number of special reports authorized by the bill, including those relating to crime, pauperism, charity, municipal taxation, valuation and indebtedness, public and semi-public utilities and mining. By a further act, approved in June, 1902, the office was directed to compile available facts in regard to the condition of irrigation.

the area of land reclaimed and the cost and value of existing irrigation works.

The good effects of the change will be apparent when the special reports based upon the census of 1900 will be issued, and in the future the office will be served by such skilled specialists in enumeration and tabulation in the various branches of statistical work that their services will in time become indispensable, and they will improve so much upon the present system that the census taken in 1910 will be the most thorough and valuable ever collected in any country in the world.

Statistics of Insurance.

INSURANCE OFFICIALS OF THE VARIOUS STATES.

The following officials have authority over insurance matters in the various States and Territories:

States.	Name of Official.	Title of Office.	Address.
Alabama	J. Thomas Heflin	Secretary of State	Montgomery.
Alaska	William L. Distin	Surveyor-General	Sitka.
Arizona	Isaac T. Stoddard	Secretary of the Territory	Phœnix.
Arkansas	T. C. Monroe	State Auditor and Insurance Commissioner	Little Rock.
California	E. Myron Wolf	Insurance Commissioner	San Francisco.
Colorado	F. S. Tesch	Deputy Superintendent of Insurance	Denver.
Connecticut	Theron Upson	Insurance Commissioner	Hartford.
Delaware	George W. Marshall	Insurance Commissioner	Milford.
District of Columbia	Thomas E. Drake	Superintendent of Insurance	Washington.
Florida	William V. Knott	State Treasurer	Tallahassee.
Georgia	W. A. Wright	Insurance Commissioner	Atlanta.
Hawaii	Henry E. Cooper	Secretary of Territory	Honolulu.
Idaho	John H. Meyers	Insurance Commissioner	Boise City.
Illinois	W. R. Vredenburgh	Acting Superintendent of Insurance	Springfield.
Indiana	David E. Sherrick	State Auditor	Indianapolis.
Iowa	B. F. Carroll	State Auditor	Des Moines.
Kansas	Charles L. Luling	Superintendent of Insurance	Topeka.
Kentucky	John B. Chenault	Insurance Commissioner	Frankfort.
Louisiana	E. J. McGivney	Assistant Secretary of State	Baton Rouge.
Maine	Stephen W. Carr	Insurance Commissioner	Augusta.
Maryland	Lloyd Wilkinson	Insurance Commissioner	Baltimore.
Massachusetts	Frederick L. Cutting	Commissioner of Insurance	Boston.
Michigan	James V. Barry	Commissioner of Insurance	Lansing.
Minnesota	E. H. Dearth	Insurance Commissioner	St. Paul.
Mississippi	W. Q. Cole	Auditor of Public Accounts	Jackson.
Missouri	Robert G. Yates	Superintendent of Insurance	Jefferson City.
Montana	J. H. Calderhead	State Auditor	Helena.
Nebraska	Charles Weston	Auditor of Public Accounts	Lincoln.
Nevada	S. P. Davis	State Comptroller	Carson City.
New Hampshire	J. C. Linehan	Insurance Commissioner	Concord.
New Jersey	D. O. Watkins	Insurance Commissioner	Trenton.
New Mexico	W. G. Sargent	Territorial Auditor	Santa Fe.
New York	Francis Hendricks	Superintendent of Insurance	Albany.
North Carolina	James R. Young	Insurance Commissioner	Raleigh.
North Dakota	Fred. Leutz	Commissioner of Insurance	Bismarck.
Ohio	A. I. Vorys	Superintendent of Insurance	Columbus.
Oklahoma	William Grimes	Insurance Commissioner	Guthrie.
Oregon	F. I. Dunbar	Secretary of State	Salem.
Pennsylvania	I. W. Dunham	Insurance Commissioner	Harrisburg.
Porto Rico	Charles Hartzell	Secretary of Insurance	San Juan.
Rhode Island	Charles C. Gray	Insurance Commissioner	Providence.
South Carolina	A. W. Jones	Comptroller of Insurance	Columbia.
South Dakota	H. C. Shober	Insurance Commissioner	Pierre.
Tennessee	Reau E. Folk	Commissioner of Insurance	Nashville.
Texas	W. J. Clay	Insurance Commissioner	Austin.
Utah	J. T. Hammond	Secretary of State	Salt Lake City.
Vermont	F. G. Fleetwood	Secretary of State	Montpelier.
Virginia	Morton Marye	Auditor of Public Accounts	Richmond.
Washington	S. H. Nichols	Insurance Commissioner	Olympia.
West Virginia	Albert C. Scherr	State Auditor	Charleston.
Wisconsin	Zeno M. Host	Commissioner of Insurance	Madison.
Wyoming	Le Roy Grant	State Auditor	Cheyenne.

The Fourth International Congress of Actuaries.

ISRAEL C. PIERSON, Ph. D., Actuary Washington Life Insurance Company.

The principal object of the congresses is to convene actuaries from all parts of the world to consider the vital questions of actuarial science as applied to the economy of life insurance: to confer on subjects of common interest, and to popularize life insurance theories and to disseminate information concerning them. These congresses have brought together representatives of many nationalities, and have made them acquainted, and, notwithstanding the great diversity of languages, have secured a universal medium of communication between actuaries, especially by a uniform notation in the science, and have established a friendly co-operation among those connected with the profession and the vast life insurance interests related thereto.

The first congress was held September 2-6, 1895, in the Palais des Academies, Brussels, under the patronage of the Belgian Government. The Minister of Finance, de Smet de Naeyer, was the honorary president, and Leon Mahillon and Am. Begault were the president and general secretary, respectively, of the congress.

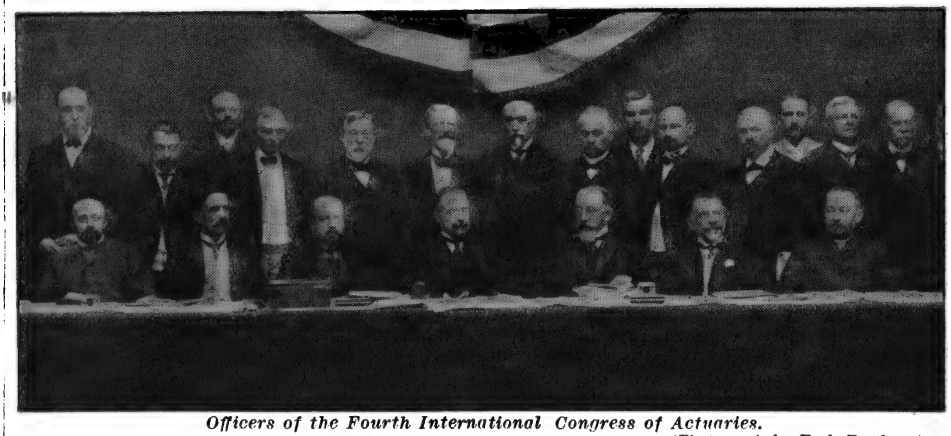
The second congress was held May 16-20, 1898, in Staple Inn Hall, London, under the auspices of and in celebration of the jubilee year of the Institute of Actuaries. Thomas E. Young, president of the institute, was president, and A. F. Burridge and F. B. Wyatt were secretaries of the congress.

The third congress occurred June 25-30, 1900, in the Palais de l'Economie et des Congres de l'Exposition Universelle, Paris, under the patronage of the French Government, the Minister of Commerce, M. Millerand, being the honorary president. The president of l'Institute des Actuaires Francais, Paul Guieysse, and Leon Marie, secretary, were president and secretary, respectively, of the congress.

The fourth International Congress of Actuaries was held in the hall of the American Fine Arts Society, No. 215 West Fifty-seventh street, New York City, on August 31 to September 5, 1903, under the auspices of the Actuarial Society of America. Each congress is an independent convention, but there exists a permanent committee on actuarial congresses, consisting of representatives of the principal countries. This committee, whose head office is in Brussels, carries on correspondence with actuaries and actuarial societies and arranges for the organization of congresses. M. Omer Lepreux, the president, and M. Am. Begault, the general secretary, were present, and M. Lepreux formally opened the fourth congress in accordance with the rules governing congresses. The Government of the United States extended its patronage and support to the congress, and was represented by several official delegates and by the secretary of the Department of Commerce and Labor, the Hon. George B. Cortelyou, who was the honorary president of the congress. In addition to the honorary president several foreign government officials, in absentia, were chosen honorary vice-presidents. The effective officers of the congress were Israel C.

Peirson, president; John Tatlock, general secretary (president and secretary respectively of the Actuarial Society of America); eight vice-presidents and eight secretaries.

The membership comprised official delegates sent by foreign governments in response to the invitation of the United States Government, officials of State insurance departments, members of actuarial institutes and societies and actuaries connected with life insurance companies. The subscribing adherents numbered many hundreds, but there were about two hundred in attendance, representing nineteen countries or nationalities.



When M. Lepreux had organized the congress the Hon. George B. Cortelyou spoke in behalf of the United States Government, and extended a welcome to the foreign representatives. The president, Mr. Pierson, then took the chair, and, after an address, began the sessions of the congress, which extended from Monday, August 23, to Saturday, September 5, 1903, inclusive, at 10 a. m. and 2:30 p. m. daily, excepting Wednesday and Saturday, the time being almost entirely devoted to the discussion of subjects which were presented in seventy-two papers, written by gentlemen from various parts of the life insurance world and printed by the general secretary in advance for the use of the members of the congress. The general division of questions was improvement in longevity, mortality in time of war, among non-Caucasian races and among miners; new British and American mortality experience tables, probable future interest rate, annuities, invalidity, health and accident insurance, pensions, State supervision, protection of wives and children against claims of creditors, technical subjects and university instruction on actuarial subjects. The official language of the congress was English, but each member was privileged to speak in English, French or German, a summary of his remarks being translated by interpreters into the other two languages. The papers and discussions will be published in a large octavo volume. The published proceedings of the first congress constitutes a volume of 492 pages; that of the second congress a volume of 931 pages; that of the third congress 1,169 pages.

The arrangements for the congress were made by the officers and the Council of the Actuarial Society of America, but plans were devised by Emory McClintock (a vice-president of the Permanent Committee), chairman of the Reception Committee, and the multitudinous details were most efficiently executed by John Tatlock (secretary of the society), general secretary of the congress.

On the invitation of the German delegates the next congress will be held at Berlin in 1906.

The social events in connection with the congress were as follows:

August 31, evening, reception to members and friends by Mayor Seth Low and George B. Cortelyou. September 1, dinner at Sherry's, given by Mutual, New York and Equitable life insurance companies. September 2, trip to Coney Island and Manhattan Beach. September 3, reception by officers of Metropolitan Life Insurance Company. September 4, dinner at Delmonico's, given by William Hughes, of the Institute of Actuaries, London. September 5, dinner at Delmonico's to members of the congress. September 6, excursion to West Point and Albany; luncheon at Fort Orange Club; return to New York by rail.

Mortality Decrease in the United States.

At the convention of insurance actuaries held in New York in August some interesting figures were given in the course of an address to show the decrease in the death rate in the United States during the period between 1878 and 1901. Thirteen representative cities were taken and a careful computation made. The tables below show the result. In 1881 and 1882 there were epidemics of diphtheria, scarlet fever and measles, which increased the death rate slightly, and an epidemic of influenza in 1890 and 1891 had a like effect.

Year.	Total Population.	Total Deaths.	Death Rate Per 1,000.	Year.	Total Population.	Total Deaths.	Death Rate Per 1,000.

Statistics of Banking.

Banking was introduced in the United States during the War of the Revolution, a resolution being adopted in Congress on May 26, 1781, approving a plan for a national bank proposed by Robert Morris, of Philadelphia. As a result the Bank of North America was incorporated on December 31 following, with a capital of $400,000, of which $254,000 had been subscribed by the United States Government. This bank, rechartered from time to time, continues in existence in Philadelphia, and is one of the national banks of the present. Another bank, known as the Bank of the United States, was projected by Alexander Hamilton when the Government had been organized under the Constitution. It was duly established, and continued in existence until 1811, when it went out of existence owing to the failure to obtain a renewal of its charter. A second Bank of the United States was incorporated on April 3, 1816, and went into operation January 7, 1817. Meanwhile other banks had been established in various parts of the country, and these, driven to suspension of specie payments by the War of 1812, were aided by the operation of the new bank to an extent which enabled them to resume. This bank itself, however, was driven to the wall in 1840 by legislation which compelled it to resume specie payments, which it had suspended. The present system of national banks was inaugurated in 1864, under exigencies created by the Civil War. The banks in the United States now number 16,983, including State and private banks; their aggregate capital is $1,488,819,167, and the deposits aggregate $10,557,087,725. Savings banks are not included in this summary. In 1832 they numbered 141, and had more than a quarter of a million depositors. At the present time they number about 1,000 and have nearly six and one-half millions of depositors.

Iowa	David B. Miller	Red Oak, Iowa.
Montana, Idaho, Oregon and Washington	J. W. Maxwell	Tacoma, Wash.
Peoria, Ill	James B. McDougal	Media, Pa.
Indiana and Western Kentucky	J. M. McIntosh	Connersville, Ind.
Michigan	Joseph W. Selden	Niles, Mich.
Massachusetts	Daniel C. Miles	Westminster, Mass.
Northern Ohio	Levi L. Miller	Canton, O.
Western Pennsylvania	Robt. J. Moorhead	Northeast, Pa.
Baltimore and Maryland	John U. Markell	Frederick, Md.
Southern Ohio and West Virginia	S. L. McCune	Athens, Ohio.
Boston	Wm. E. Neal	Lynn, Mass.
Chicago	William C. Oakley	Chicago, Ill.
Northern Pennsylvania	Frank E. Patterson	Wilkesbarre, Pa.
Connecticut and Rhode Island	Charles S. Perkins	Meriden, Conn.
New York City and New Jersey	E. Ridgly	New York, N. Y.
West Virginia and Virginia	Chas. W. Robinson	Fairmount, W. Va.
Omaha and Lincoln, Neb	John Rush	Omaha, Neb.
Hawaiian Islands	J. Castle Ridgway	Hilo, Hawaii.
Massachusetts	Irving B. Sayles	Millbury, Mass.
Illinois	J. Mack Sholl	Carthage, Ill.
Oklahoma and Indian Territory	Myron R. Sturtevant	Oklahoma City, O. T.
South Dakota	George A. Silsby	Mitchell, S. D.
Iowa	E. B. Shaw	West Union, Iowa.
Southern New York	Chas. E. Van Brocklin	Cortland, N. Y.
Albany and Northern New York	Josiah Van Vranken	Schenectady, N. Y.
Western Ohio	Edgar J. Vaughan	Cardington, O.
New Mexico, Arizona, N. W. Texas	Miller Weir	El Paso, Tex.
California, Nevada and Western Oregon	John W. Wilson	Redlands, Cal.
Pittsburg	Hugh Young	Pittsburg, Pa.
Kentucky and Tennessee	W. L. Yerkes	Paris, Ky.
Porto Rico	L. D. Harry	San Juan.
	John W. Schofield	Washington, D. C.

WHAT CONSTITUTES TRAVELLERS' BAGGAGE.

The Board of Classification of the United States General Appraisers recently rendered a decision relative to articles imported as travellers' baggage.

Articles not carried by a person for his or her personal use or convenience cannot be considered a part of travellers' baggage. Only such articles "as are in the use of and as are necessary and appropriate for the wear and use of such persons, for the immediate purpose of the journey and present comfort and convenience" are exempted from customs. The term "smokers' articles" has been construed to mean any article used by smokers, and to include tables, stands and "smoking sets," as well as cigars, tobacco, pipes, cigarettes and cigarette papers. Articles intended as gifts to other persons may not be admitted free of duty.

United States Treasury Department Statistics.

THE PUBLIC DEBT.

(From the report of the Secretary of the Treasury.)

Statement of the outstanding principal of the public debt of the United States on the 1st of January of each year from 1791 to 1843, inclusive, and on the 1st of July of each year from 1843 to 1903, inclusive.

Year.	Amount.	Year.	Amount.
Jan. 1, 1791	$75,463,476.52	July 1, 1847	$38,826,534.77

1846	15,550,202.97	1903	‡2,162,639,009.89

*In the amount here stated as the outstanding principal of the public debt are included the certificates of deposit outstanding on the 30th of June, issued under an act of June 8, 1872, for which a like amount in United States notes was on special deposit in the Treasury for their redemption and added to the cash balance in the Treasury. These certificates, as a matter of accounts, are treated as a part of the public debt, but being offset by notes held on deposit for their redemption, should properly be deducted from the principal of the public debt in making comparison with former years.

†Exclusive of gold, silver, currency certificates, and Treasury notes of 1890 held in the Treasurer's cash, and including bonds issued to the several Pacific railroads not yet redeemed.

‡Exclusive of gold and silver certificates and Treasury notes of 1890 held in the Treasurer's cash.

COIN AND PAPER CURRENCY IN CIRCULATION OCTOBER 1, 1903.

	General Stock of Money in the United States.	†Held in Treas. as Assets of the Government.	Money in Circulation.	
			Oct. 1, 1902.	Oct. 1, 1903.
Gold coin (including bullion in Treasury)	$1,277,362,651	$260,714,058	$624,728,060	$622,550,934
*Gold certificates	.....	.....	304,382,054	394,097,659
Standard silver dollars	555,886,980	21,405,281	75,043,719	75,959,483
*Silver certificates	.....	.....	459,571,478	458,522,216
Subsidiary silver	102,825,368	7,958,268	89,906,205	94,867,102
Treasury notes of 1890	17,498,000	162,792	26,741,790	17,335,208
United States notes	346,681,016	10,302,247	342,930,086	336,378,769
National bank notes	420,426,535	15,520,837	352,383,269	404,905,698
Totals	$2,720,680,550	$316,063,481	$2,275,686,651	$2,404,617,069

Population of the United States, October 1, 1903, estimated at 80,831,000; circulation per capita, $29.75.

*For redemption of outstanding certificates an exact equivalent in amount of the appropriate kinds of money is held in the Treasury, and is not included in the account of money held as assets of the Government. †This statement of money held in the Treasury as assets of the Government does not include deposits of public money in national bank depositories, to the credit of the Treasurer of the United States, and amounting to $153,264,807.99. For a full statement of assets see Public Debt Statement.

Coin and Paper Circulation of the United States, 1860 to 1903.

(From the report of the Secretary of the Treasury.)

Note.—Specie payments were suspended from January 1, 1862, to January 1, 1879. During the greater part of that period gold and silver coins were not in circulation except on the Pacific coast, where, it is estimated, the specie circulation was generally about $25,000,000. This estimated amount is the only coin included in the above statement from 1862 to 1875, inclusive. In 1876 subsidiary silver again came into use, and is included in this statement, beginning with that year. The coinage of standard silver dollars began in 1878, under the act of February 28, 1878. Specie payments were resumed January 1, 1879, and all gold and silver coins, as well as gold and silver bullion in the Treasury, are included in this statement from and after that date. For redemption of outstanding certificates an exact equivalent in amount of the appropriate kinds of money is held in the Treasury, and is not included in the account of money held as assets of the Government. This table represents the circulation of the United States as shown by the revised statements of the Treasury Department for June 30 of each of the years specified.

Year.	Coin, including bullion in Treasury.	United States notes and bank notes.	Total money	Coin, bullion and paper money in Treasury, as assets.	Circulation.	Population.	Circulation per capita.

1902				

Incidental Coinage at the Philadelphia Mint.

During the fiscal year of 1901 the mint at Philadelphia coined, in addition to the domestic coinage, 225,000 gold pieces of the value of $349,014.42 for the Government of Costa Rica. Besides this coinage, which was done under contract, the Philadelphia mint produced 1,041 medals of gold, silver and bronze, for various purposes. A number of these were school medals, some were single medals awarded for particular deeds, while the greater part were medals authorized by the Government for presentation in the various departments of Life Saving, the Army and the Navy. The profit on medals and proof coins was $1,628.84.

Coinage of Mints of the United States from Their Organization, 1792 to June 30, 1902.

Denominations.	Pieces.	Value.
Gold.		
Double eagles	81,433,432	$1,628,668,640.00
Eagles	36,509,847	365,093,470.00

Atlantic Ocean Records.

The record for fast trips across the Atlantic has been steadily lowered from year to year. It is only a comparatively short time since six days was considered remarkably fast time, while now there are about a dozen steamers which have made the trip in less time than that. The fastest time from Queenstown to New York was made by the steamship Lucania, of the Cunard line, which sailed it in 5 days, 7 hours and 23 minutes in 1894. This distance is about 2,800 miles, which shows that the steamer made nearly 23 miles an hour for the whole distance. The time of the Kaiser Wilhelm, Cherbourg to New York, 3,184 miles, in 5 days and 16 hours, was even faster than this, being a little over 23 miles an hour, and was made in 1901.

The best record for sailing vessels was made by the square-rigged ship Atlas, which made the trip from Hong Kong to Hog Island, off the Virginia coast, in 90 days, coming through the Indian seas and the Atlantic Ocean. The best previous authentic time for a like voyage was 97 days, though there is a tradition that the American ship Rainbow made the trip in 87 days about fifty years ago.

RECORD TRIPS ACROSS THE ATLANTIC.

Steamer.	Line.	Route.	D.	H.	M.	Date.
Lucania	Cunard	Queenstown to N. Y	5	7	23	Oct. 21-26, 1894.
Lucania	Cunard	New York to Queenstown	5	8	38	Sept. 8-14, 1894.
Deutschland	Hamburg-American	Cherbourg to New York	5	11	54	Sept. 2-8, 1903.
Kaiser Wilhelm der Grosse	N. German Lloyd	Southampton to N. Y	5	17	38	Oct. 22-29, 1899.
Kaiser Wilhelm der Grosse	N. German Lloyd	N. Y. to Southampton	5	15	10	Nov. 23-29, 1897.
La Savoie	French	Havre to N. Y	6	9	35	March 22-28, 1902.
La Lorraine	French	N. Y. to Havre	6	9	47	Sept. 3-10, 1903.
Deutschland	Hamburg-American	Plymouth to N. Y	5	12	29	Jan. 4-10, 1900.
Deutschland	Hamburg-American	N. Y. to Plymouth	5	7	38	Sept. 5-10, 1900.
Kaiser Wilhelm der Grosse	N. German Lloyd	N. Y. to Cherbourg	5	16	..	Aug. 26-Sept. 1, 1901.

FAST TRIPS OF VARIOUS LINES.

Steamer.	Line.	Route.	D.	H.	M.	Date.
Paris	American	Queenstown to N. Y	5	14	24	Oct. 14-19, 1892.
St. Paul	American	Southampton to N. Y	6	..	31	Aug. 8-14, 1896.
Kronprinz Wilhelm	N. German Lloyd	N. Y. to Plymouth	5	18	18	Oct., 1901.
Fuerst Bismarck	Hamburg-American	N. Y. to Southampton	6	10	15	Oct. 20-27, 1898.
Alaska	Guion	N. Y. to Queenstown	6	18	37	Sept. 12-19, 1882.
Alaska	Guion	Queenstown to N. Y	6	21	40	Sept. 16-22, 1883.
Kronprinz Wilhelm	N. German Lloyd	Cherbourg to N. Y	5	11	57	Sept. 10-16, 1903.
La Savoie	French	Havre to N. Y	6	9	35	March 22-28, 1902.
St. Louis	American Line	Southampton to N. Y	6	2	24	Aug. 1, 1896.
Friesland	Red Star	N. Y. to Antwerp	8	22	18	Aug., 1894.

Fastest day's run made by Deutschland, July-August, 1901, 601 knots, or 24.19 knots per hour.

APPROXIMATE DISTANCES.

Sandy Hook (Lightship), New York, to Queenstown (Daunt's Rock)	2,800 Miles
Sandy Hook (Lightship), New York, to Plymouth	2,978 Miles
Sandy Hook (Lightship), New York, to Southampton (The Needles)	3,100 Miles
Sandy Hook (Lightship), New York, to Havre	3,170 Miles
Sandy Hook (Lightship), New York, to Cherbourg	3,184 Knots

HOW THE RECORD HAS BEEN REDUCED.

The following is a list of steamships which have broken the records between New York and Queenstown since 1852. Before that time the Acadia, of the Cunard line, held the blue ribbon, the Acadia being the first ship to make the trip in less than ten days.

Vessel.	Line.	Year.	D.	H.	M.	Vessel.	Line.	Year.	D.	H.	M.

CHINESE EXCLUSION.

The report of the Commissioner-General of Immigration for the year ending June 30, 1903, shows an improvement in the administration of the Chinese exclusion laws. Attention has been paid chiefly to the Canadian and Mexican borders, where more opportunity is found to smuggle Chinese into the United States. A school for coaching Chinamen in the answers to be given in case of arrest on crossing the border has been practically broken up through the efforts of the Government, assisted by the Canadian Pacific Railroad.

The following table gives the figures for three years for arrests of Chinese persons crossing the land borders of the United States, and the disposition of their cases by United States commissioners and courts:

	1901.			1902.			1903.		
	Deported.	Discharged.	Total.	Deported.	Discharged.	Total.	Deported.	Discharged.	Total.
Canadian border:									
East of Ohio	171	358	529	258	417	675	333	485	818

United States Postal Statistics.

THE DEPARTMENT REPORT.

(Prepared from the latest reports of the Postmaster-General and from special information supplied by the Department.)

At the close of the fiscal year 1903 there were 1,400 lines of travelling post offices, covering 189,298 miles in length. The number of clerks employed was 10,555; annual travel by them in cars, 235,114,604 miles. To accomplish this 4,039 cars and compartments were used on the steam roads, besides 20 cars on the electric lines under the supervision of the railway mail service, and 87 apartments on steamboats. These clerks handled 8,654,147,680 pieces of first-class mail matter, and 7,345,654,950 of other classes, making a total of 15,999,802,630 pieces of mail, exclusive of the registered mail, which consisted of 29,897,063 packages and cases. The errors by clerks in handling the mail, as reported, indicated but one error made for every 11,530 pieces correctly distributed.

There were 373 casualties to mail cars last year in which either mail was damaged or clerks injured. Eighteen regular clerks, one substitute and three weighers were killed; 78 clerks seriously and 398 slightly injured.

The postal receipts from the principal post offices in the country for the fiscal year ended June 30, 1903, were as follows:

Office.	Amount.	Office.	Amount.	Office.	Amount.
New York, N. Y.	$13,012,777.91	Indianapolis, Ind.	$633,874.93	New Haven, Conn.	$318,707.18

1903	74,031	506,268	134,244,433	138,784,488	21,631,751	65,507,48[illegible]

Of the whole number of post offices at the close of the fiscal year June 30, 1903, 5,045 were Presidential, showing an increase over the previous year of 314; 68,986 were fourth-class, showing a decrease of 2,207, due to the extension of rural free delivery.

In the year 1790 there were 75 post offices in operation. At that time the population of the thirteen States which then constituted the Union was, in round numbers, 3,930,000 people, served by 75 post offices, an average of 1 office to 52,400 people. Since that time the offices have been multiplied over 1,000 times, while the population has multiplied over 20 times.

United States Land Office Statistics.

(The report for 1903 prepared for The American Almanac by the United States Land Office, May 20, 1862, to June 30, 1903.)

The receipts of the General Land Office for the fiscal year ended June 30, 1903, were:

Property Sold.	Amount.	Property Sold.	Amount.
From disposal of public lands	$10,557,618.66	For furnishing copies of records and plats	$30,118.48
From disposal of Indian lands	308,939.14		
From depredations on public lands	95,251.31	Total	$11,024,743.65
From sales of timber under acts of 1891 and 1897	31,966.24	This is an increase of cash receipts over 1902 of	4,762,816.47
From sales of Government property (old office furniture, etc)	849.82

*The unreserved lands in Alaska are mostly unsurveyed and unappropriated. †So far as estimated.

THE UNSURVEYED LANDS.

The following table shows the total area of public and Indian lands remaining unsurveyed, including the area of private land claims surveyed up to the close of the last fiscal year:

States and Territories.	Acres.	States and Territories.	Acres.
Alaska	368,100,311	New Mexico	27,330,207
Arizona	51,290,003	North Dakota	6,333,934
California	23,191,932	Oklahoma	79,208
Colorado	4,143,462	Oregon	14,424,922
Florida	4,234,032	South Dakota	3,690,286
Idaho	32,774,724	Utah	32,662,882
Louisiana	1,880,148	Washington	14,943,900
Minnesota	3,190,060	Wyoming	7,664,616
Montana	57,763,504		
*Nebraska	49,421	Total	†689,629,384
Nevada	32,881,879		

*There were 91,212 acres resurveyed in Cheyenne and Cherry counties, Neb., not counted in this column.
†This estimate is of a very general nature and affords no index to the disposal volume of land remaining, nor the amount available for agricultural purposes. It includes Indian and other public reservations, unsurveyed private land claims, as well as surveyed private land claims in the districts of Arizona, California, Colorado and New Mexico; the sixteenth and thirty-sixth sections reserved for common schools; unsurveyed lands embraced in railroad, swamp lands and other grants; the great mountain areas; the areas of unsurveyed rivers and lakes, and large areas wholly unproductive and unavailable for ordinary purposes.

(a) 674 square miles of Lake Michigan included. (b) 230 square miles of Lake Michigan included. (c) 16,653 square miles of Lake Superior, 12,292 square miles of Lake Michigan, 9,925 square miles of Lake Huron, and 460 square miles of Lakes Erie and St. Clair included. (d) 2,514 square miles of Lake Superior included. (e) 3,140 square miles of Lake Ontario and Lake Erie included. (f) 3,443 square miles of Lake Erie included. (g) 891 square miles of Lake Erie included. (h) 2,378 square miles of Lake Superior and 7,500 square miles of Lake Michigan included.

The area of Lake Michigan is included in the table, and so much of the areas of Lakes Superior, Huron, St. Clair, Erie and Ontario as is within the jurisdiction of the United States.

For the States bordering the oceans the general shore line is taken as boundary, thus including the areas of bays, inlets, etc.

The American Indian.

The annual report of the agents of the United States Bureau of Indian Affairs in 1902 showed that the Indian population, exclusive of Alaska, was 270,238, distributed in the several States as follows:

Arizona	42,287	Kansas	1,238	New York	5,272	Utah	2,175
California	15,098	Michigan	6,255	North Carolina...	1,491	Washington	9,868
Colorado	955	Minnesota	8,865	North Dakota ...	8,204	Wisconsin	10,297
Florida	358	Montana	9,904	Oklahoma	13,371	Wyoming	1,628
Idaho	3,660	Nebraska	3,869	Oregon	3,888	Miscellaneous	653
Indian Territory..	86,085	Nevada	5,224	South Dakota ...	19,102		
Iowa	338	New Mexico	9,583	Texas	470	Total.....	270,238

The expenditures of the United States on account of the Indians in the fiscal year ended June 30, 1903, was $12,935,168. The expenditures from 1789 to 1903, inclusive, have been $402,217,528.

The five civilized tribes, Indians and colored:—Cherokees, 31,000; Chickasaws, 6,000; Choctaws, 16,000; Creeks, 10,000; Seminoles, 2,757; total, 65,757; total colored Indian citizens and claimants, 18,750; grand total	84,507
Pueblos of New Mexico	7,985
Six Nations, Saint Regis and other Indians of New York	5,232
Eastern Cherokees of North Carolina	1,395

INDIAN AGENCIES AND SCHOOLS.

The following table contains a list of the Indian agencies and schools, with the name and address of the agent or superintendent in charge:

Agency or School.	State or Territory.	Character of Station.	Agent or Superintendent.	Address.
Albuquerque.....	N. Mex...	Training school...	James K. Allen.....	Albuquerque, N. M.
Blackfeet.....	Mont.....	Agency.....	James H. Monteath.....	Browning, Mont.
Cantonment.....	Okla.....	Training school...	B. E. White.....	Cantonment, Okla.
Carlisle.....	Pa.....	Training school...	Lt.-Col. R. H. Pratt, U. S. A.....	Carlisle, Pa.
Carson.....	Nev.....	Training school...	Calvin H. Asbury.....	Carson City, Nev.
Chamberlain.....	S. D....	Training school...	John Flinn.....	Chamberlain, S. D.
Cherokee.....	N. C....	School agency....	Henry W. Spray.....	Cherokee, N. C.
Cheyenne and Arapahoe..	S. D....	Agency.....	Maj. G. W. H. Stouch, U. S. A...	Darlington, Okla.
Cheyenne River.....	S. D....	Agency.....	Ira A. Hatch.....	Gettysburg, S. D.
Chilocco.....	Okla.....	Training school...	Samuel M. McCowan.....	Chilocco, Okla.
Colorado River.....	Ariz.....	Agency.....	Jesse C Moore	Parker, Ariz.
Coolville.....	Wash....	Agency.....	Albert M. Anderson	Miles, Wash.
Crow.....	Mont....	Agency.....	Samuel G. Reynolds.....	Crow Agency, Mont.
Crowcreek.....	S. D....	Agency.....	H. D. Chamberlain	Crowcreek, S. D.
Devil's Lake.....	N. D....	Agency.....	Fred. O. Getchell	Fort Totten, N. D.
Flathead.....	Mont.....	Agency.....	W. H. Smead	Jocko, Mont.
Fort Apache.....	Ariz.....	Agency.....	C. W. Orouse	White River, Ariz.
Fort Belknap.....	Mont....	Agency.....	William R. Logan.....	Harlem, Mont.
Fort Berthold.....	N. D....	Agency.....	A. W. Thomas.....	Elbowoods, N. D.
Fort Bidwell.....	Cal.....	Training school...	Chas. D. Rakestraw.....	Fort Bidwell, Cal.
Fort Hall.....	Idaho....	Agency.....	A. F. Caldwell	Rossfork, Idaho.
Fort Lapwai.....	Idaho....	Training school...	Earl T. McArthur.....	Lapwai, Idaho.
Fort Lewis.....	Col.....	Training school...	Thomas H. Breen	Breen, Col.
Fort Mohave.....	Ariz.....	Training school...	D. D. McArthur.....	Mohave City, Ariz.
Fort Peck.....	Mont....	Agency.....	C. R. A. Scobey	Poplar, Mont.
Fort Shaw.....	Mont....	Training school...	F. C. Campbell	Sun River, Mont.
Fort Totten.....	N. D....	Training school...	Charles L. Davis	Fort Totten, N. D.
Fort Yuma.....	Ariz.....	Training school...	John S. Spear	Yuma, Ariz.
Genoa.....	Neb.....	Training school...	William H. Winslow	Genoa, Neb.
Grand Junction.....	Col.....	Training school...	T. G. Lemmon	Grand Junction, Col.
Grande Ronde.....	Ore.....	School agency....	Dr. Andrew Kershaw	Grande Ronde, Ore.
Green Bay.....	Wis.....	Agency.....	Shepard Freeman.....	Keshena, Wis.
Greenville.....	Cal.....	Training school...	Charles E. Shell	Greenville, Cal.
Haskell Institute.....	Kan.....	Training school...	H. B. Peairs.....	Lawrence, Kan.
Hoopa Valley.....	Cal.....	School agency....	Frank Kyselka	Hooper, Cal.
Jicarilla.....	N. Mex...	Agency.....	H. H. Johnson.....	Dulce, N. M.
Kickapoo.....	Kan.....	Training school...	O. C. Edwards.....	Germantown, Kan.
Kiowa.....	Okla.....	Agency.....	Colonel J. F. Randlett, U. S. A..	Anadarko, Okla.
Klamath.....	Ore.....	Agency.....	O. C. Applegate	Klamath Agency, Ore.
La Pointe.....	Wis.....	Agency.....	S. W. Campbell	Ashland, Wis.
Leech Lake.....	Minn.....	Agency.....	Major George L. Scott, U. S. A...	Onigum, Minn.
Lemhi.....	Idaho....	Agency.....	E. M. Yearian	Lemhi Agency, Idaho.
Lower Brule.....	S. D.....	Agency.....	R. H. Somers	Lower Brule, S. D.
Mescalero.....	N. Mex..	School agency.....	James A. Carroll	Mescalero, N. M.
Mission Tule River	Cal.....	Agency.....	Lucius A. Wright.....	San Jacinto, Cal.

INDIAN AGENCIES AND SCHOOLS.—Continued.

Agency or School.	State or Territory.	Character of Station.	Agent or Superintendent.	Address.
Moqui	Ariz.	Training school	C. E. Burton	Keams Canon, Ariz.
Morris	Minn.	Training school	J. B. Brown	Morris, Minn.
Mt. Pleasant	Mich.	Training school	E. C. Nardin	Mt. Pleasant, Mich.
Navajo	N. Mex.	Agency	G. W. Hayzlett	Fort Defiance, Ariz.
Neah Bay	Wash.	Agency	Claude C. Covey	Neah Bay, Wash.
Nevada	Nev.	School agency	F. B. Spriggs	Wadsworth, Nev.
New York	N. Y.	Agency	B. B. Weber	Salamanca, N. Y.
Omaha and Winnebago	Neb.	Agency	Vacant	Winnebago, Neb.
Oneida	Wis.	Training school	Joseph C. Hart	Oneida, Wis.

Practical Education in Rural Schools.

The idea of furnishing practical education in rural schools became a developed plan in Illinois in 1902, when the Farmer Boys' Experiment Club was organized as an adjunct to the county school system of Winnebago County. The first meetings of the club were devoted to hearing talks on practical farming by professors from the State Agricultural College, in order to arouse sufficient interest in the subject. Excursions were then made to the agricultural college and experimental farm. After that the boys were given actual farm work to do, in experiments and observation.

The experimental and observation work has consisted in testing the vitality of various seeds, planting corn and noting growth, testing for smut in oats, experimenting with sugar beets and, in a way, becoming an adjunct to the experimental stations in the State. It has been the plan to incorporate arithmetic, the simplest of agricultural chemistry, elementary biology and some farm economics into observation of growing crops and the planting of new seeds. By arrangement with the experiment stations the members of this club were furnished a supply of sugar beet seed, to see if sugar beets could be grown with profit in northern Illinois. The young farmers were required to keep a record of the cost of labor, the rent of ground, etc., to determine the first cost of raising beets. Prizes are offered for the best crop raised by members of the club, who are encouraged to exhibit the results of their labor at the

farmers' institutes held in different parts of the State. Experimental school gardens have been in use in rural communities in many parts of the United States for several years, and the idea was adopted in Illinois as a factor in agricultural work in the common schools in 1903. Several school districts have been consolidated, and at the consolidated school especial care was taken to arrange for school gardens of the most practical sort. Three and one-half acres of the best farm land obtainable were purchased, and the grounds laid out under the direction of the chief of the horticultural department of the State Agricultural College. Farm plots for all of the pupils were planned, as well as extensive playgrounds and athletic fields.

The central idea of experimental farm work in the schools seemed to be to interest and educate the child in out-of-doors things, rather than to make him a farmer, and to bring into practical use the subjects he studies under other names.

Cost of Higher Education in Various Countries.

The figures given in the tables of the cost of higher education in various countries are from the report of the Commissioner of Education and are intended to give an idea of the approximate amounts paid for higher education in the principal countries of the world. Educational systems differ greatly in different countries, and it is possible to make fair comparisons of cost only where it is possible to make fair comparisons of the systems employed. In Germany a great deal of such work as is done in higher educational institutions in this country is carried on in the secondary schools, or gymnasia.

In a number of countries which might have place in these tables it was impossible to obtain data, according to the Commissioner's report, and no safe figures can be given. In other cases census figures had to be used, though dating back several years previous to the time of the report. The data for Greece was obtained shortly after the war with Turkey, and are much lower than might be expected.

Country.	Expenditure for Higher Education.	Per Capita (Cents).	Country.	Expenditure for Higher Education.	Per Capita (Cents).	Country.	Expenditure for Higher Education.	Per Capita (Cents).
Algeria	$128,535	2.9	Germany	$7,450,366	14.3	Portugal	$253,268	5.0
Argentine	250,000	6.0	Great Britain and Ireland	8,353,655	21.7	Roumania	426,324	7.3
Australia	614,140	15.2	Greece	103,636	4.3	Russia (and Siberia)	4,740,709	3.7
Austria	2,692,370	11.3	Hungary	1,240,246	7.1	Serria	63,690	2.8
Belgium	748,267	11.4	Italy	2,198,833	7.0	Spain	487,899	2.5
Bulgaria	75,498	2.3	Liberia	102,434	1.8	Sweden	653,209	13.0
Canada	1,014,254	19.5	Netherlands	767,229	15.3	Switzerland	672,505	21.8
Denmark	299,686	13.7	Norway	166,717	8.3	*United States	20,836,488	3.3
France	4,391,012	11.4						

*The cost of higher education in the United States can be approximated only, as the expenses are met by so many different methods. For the same reason only an approximation of the per capita cost can be given. The Government expended $985,009 toward higher education in 1900.

State School Officers.

(Corrected to date by the United States Bureau of Education.)

Name.	Address.	Official Designation.
I. W. Long	Montgomery, Ala	State superintendent of education.
Sheldon Jackson	Sitka, Alaska	General agent of education.
N. G. Layton	Phoenix, Ariz	Territorial superintendent of public instruction.
John H. Hinemon	Little Rock, Ark	State superintendent of public instruction.
Thomas J. Kirk	Sacramento, Cal	do
Mrs. Helen L. Grenfell	Denver, Colo	do
Charles D. Hine	Hartford, Conn	Secretary of State Board of Education.
P. B. Norman, Jr	Dover, Del	do
A. T. Stuart	Washington, D. C	Superintendent of district schools.
W. N. Sheats	Tallahassee, Fla	State superintendent of public instruction.
W. B. Merritt	Atlanta, Ga	State school commissioner.
A. T. Atkinson	Honolulu, Hawaii	Superintendent of public instruction.
Miss Permeal French	Boise, Idaho	State superintendent of public instruction.
Alfred Bayliss	Springfield, Ill	do
John D. Benedict	Muscogee, Ind. T	Territorial superintendent of schools.
Frank L. Jones	Indianapolis, Ind	State superintendent of public instruction.
R. C. Barrett	Des Moines, Iowa	do
I. L. Dayhoff	Topeka, Kans	do
H. V. McChesney	Frankfort, Ky	do
J. V. Calhoun	Baton Rouge, La	State superintendent of public education.
W. W. Stetson	Augusta, Me	State superintendent of public schools.
M. Bates Stephens	Baltimore, Md	State superintendent of public instruction.
Frank A. Hill	Boston, Mass	Secretary of State Board of Education.
Delos Fall	Lansing, Mich	State superintendent of public instruction.
J. W. Olsen	St. Paul, Minn	do
Henry L. Whitfield	Jackson, Miss	State superintendent of public education.
W. T. Carrington	Jefferson City, Mo	State superintendent of public schools.
W. W. Welch	Helena, Mont	State superintendent of public instruction.
W. K. Fowler	Lincoln, Neb	do
Orvis Ring	Carson, Nev	do
Channing Folsom	Concord, N. H	do
Chas. J. Baxter	Trenton, N. J	do
J. Franco Chavez	Santa Fe, N. M	Territorial superintendent of public instruction.
Charles R. Skinner	Albany, N. Y	State superintendent of public instruction.
J. Y. Joyner	Raleigh, N. C	do
W. L. Stockwell	Bismarck, N. D	do
Lewis D. Bonebrake	Columbus, O	State commissioner of common schools.
L. W. Baxter	Guthrie, Okla	Territorial superintendent of public instruction.
J. H. Ackerman	Salem, Ore	State superintendent of public instruction.
Nathan C. Schaeffer	Harrisburg, Pa	do
Elmer B. Bryan	Manila, P. I	General superintendent of public instruction.
Samuel M. Lindsay	San Juan, P. R	Commissioner of education.
Thomas B. Stockwell	Providence, R. I	Commissioner of public schools.
O. B. Martin	Columbia, S. C	State superintendent of education.
G. W. Nash	Pierre, S. D	State superintendent of public instruction.
Seymour A. Mynders	Nashville, Tenn	do
Arthur Lefevre	Austin, Tex	do
A. C. Nelson	Salt Lake City, Utah	do
Walter E. Ranger	Montpelier, Vt	State superintendent of education.
Joseph W. Southall	Richmond, Va	State superintendent of public instruction.
R. B. Bryan	Olympia, Wash	do
Thomas C. Miller	Charleston, W. Va	State superintendent of free schools.
C. P. Cary	Madison, Wis	State superintendent of public schools.
Thomas T. Tynan	Cheyenne, Wyo	State superintendent of public instruction.

Educational Institutions in the United States.

(Prepared from information obtained from the presidents of the various universities and colleges.)

The following is a list of the most prominent colleges and universities in the United States, with the latest information obtainable regarding the financial and educational standing of each institution:

Name of Institution.	Location.	Denominational Control.	President or Chairman of Faculty.	Year of Organization.	Number of Instructors.	Number of Students	Commencement Day, 1904.	Graduates Since Organization.	Cost of Tuition.	Living Expenses.	Other Expenses.	Receipts From Benefactions During 1903.	Total Income, 1903.
Adelphi College	Brooklyn, N. Y.	Non-sectarian	C. H. Levermore, B.A., Ph.D.	1896	34	425	June 14	60	$180	$200

The Produce Market.

PRICES OF WHEAT FOR 34 YEARS.

The following table shows the highest and lowest prices for No. 2 Spring Wheat in the Chicago market for the past 34 years, and the months in which extreme prices were reached:

Years.	Months the Lowest Prices Were Reached.	Range for the Entire Year.		Months the Highest Prices Were Reached.
1869	December	$0.76½	$2.47	August.
1870	April	.73¼	1.31½	July.
1871	August	.99½	1 32	Feb., April, Sept
1872	November	1.01	1.61	August.
1873	September	.89	1.46	July.
1874	October	.81½	1.28	April.
1875	February	.83¼	1.30½	August.
1876	July	.83	1.26¾	December.
1877	August	1.01½	1 76½	May.
1878	October	.77	1.14	April.
1879	January	.81⅝	1.33½	December.
1880	August	.86½	1.32	January.
1881	January	.95⅜	1.43¼	October.
1882	December	.91⅛	1.40	April and May.
1883	October	.90	1.13½	June.
1884	December	.69½	.96	February.
1885	March	.73⅜	.91¾	April.
1886	October	$0.69⅜	$0.84¾	January.
1887	August	.66⅝	.94¾	June.
1888	April	.71⅛	2 00	September.
1889	June	.75	1.08¾	February.
1890	February	.74¼	1.08¼	August.
1891	July	.85	1.16	April.
1892	October	.69⅛	.91¾	February.
1893	July	.54	.88	April.
1894	September	.50	.65¼	April.
1895	January	.48¾	.85⅝	May.
1896	August	.53	.94⅜	November.
1897	April	.64⅛	1.09	December.
1898	October	.62	1.85	May.
1899	December	.64	.79½	May.
1900	January	.61½	.87½	June.
1901	July	.63⅛	.88⅜	December.
1902	October	.67½	.95	September.

PRICES OF CORN FOR 34 YEARS.

The following table shows the lowest and highest prices for No. 2 Corn in the Chicago market for the past 34 years, and the months in which extreme prices were reached:

Years.	Months the Lowest Prices Were Reached.	Range for the Entire Year.		Months the Highest Prices Were Reached.
1869	January	$0.44	$0.97½	August.
1870	December	.45	.94½	May.
1871	December	.39½	.56½	March and May.
1872	October	.29½	.48⅝	May.
1873	June	.27	.54¼	December.
1874	January	.49	.86	September.
1875	December	.45½	.76½	May and July.
1876	February	.38⅜	.49	May.
1877	March	.37⅝	.58	April.
1878	December	.29⅞	.43⅝	March.
1879	January	.29⅜	.49	October.
1880	April	.31½	.43¾	November.
1881	February	.35¾	.76⅜	October.
1882	December	.49¼	.81½	July.
1883	October	.46	.70	January.
1884	December	.34½	.87	September.
1885	January	.34¼	.49	April and May.
1886	October	$0.33⅛	$0.45	July.
1887	February	.33	.51⅜	December.
1888	December	.33½	.60	May.
1889	December	.29¼	.61	November.
1890	February	.27½	.53⅞	November.
1891	December	.39⅜	.75½	April.
1892	March	.36½	1.00	May.
1893	December	.34½	.44¾	January.
1894	Jan. and Feb.	.34	.59½	August.
1895	December	.25	.55½	May.
1896	September	.19½	.30⅝	April.
1897	January	.21¼	.32⅝	August.
1898	January	.26	.38	December.
1899	December	.30	.38⅛	January.
1900	January	.30½	.44¾	July.
1901	February	.38⅝	.69¼	December.
1902	December	.43¾	.88	July.

PRICES OF OATS FOR 34 YEARS

The following table shows the lowest and highest prices for Oats for the past 34 years, and the months in which the extreme prices were reached:

Years.	Months the Lowest Prices Were Reached.	Range for the Entire Year.		Months the Highest Prices Were Reached.
1869	October	$0.35½	$0.71	July.
1870	September	.32½	.53½	May.
1871	August	.27	.51½	March and April
1872	Oct. and Nov.	.20¼	.43¼	June.
1873	April	.23¾	.40⅝	December.
1874	August	.37¼	.71	July.
1875	December	.29½	.64½	May.
1876	July	.27	.35	September.
1877	August	.22	.45¾	May.
1878	October	.18	.27½	July.
1879	January	.19½	.36¾	December.
1880	August	.22½	.35	Jan. and May.
1881	February	.29½	.47¾	October.
1882	September	.30½	.62	July.
1883	September	.25	.43½	March.
1884	December	.23	.34¼	April.
1885	September	.24¼	.36½	April.
1886	October	$0.22⅞	$0.35	January.
1887	March and April	.23½	.31½	December.
1888	September	.23¼	.37¾	May.
1889	October	.17¾	.26⅜	February.
1890	February	.19¼	.45	November.
1891	October	.26¼	.57¾	April.
1892	March	.27	.35½	June.
1893	August	.22	.32	Jan., Feb., May.
1894	January	.27	.50	June.
1895	December	.16⅞	.31½	June.
1896	September	.14¾	.20¼	February.
1897	February	.15⅝	.23⅞	December.
1898	July	.19	.30⅝	April.
1899	August	.19¼	.28⅛	February.
1900	August	.21	.26¼	June.
1901	February	.21⅜	.46¾	December.

Cotton.

GEORGE W. AVERY.

The cotton plant had been found growing in a wild state by the first settlers of the southwestern portion of this country, but 1621 is generally regarded as the first year of cotton culture in the United States. Its cultivation was for a long time limited to small patches for domestic uses. In 1733 cotton seed was brought into Carolina, and in 1734 cotton was planted in Georgia from seed sent to the trustees from England. About 1770 Southern planters began turning their attention to the cultivation of cotton as a staple crop. In 1775 the first manufactory for cotton was established in Philadelphia. It also manufactured goods from flax and wool. In 1787 the first regular cotton factory in the United States was built at Beverly, Mass. The Legislature made a grant of $500 to assist the new enterprise. The year 1793 was made memorable by Eli Whitney's invention of the saw-gin. Previous to this time the only method of separating the lint from the seed was by hand, and a large number of slaves were kept on the Southern plantations for this work alone. Cotton picking is still done entirely by hand. There have been many attempts to perfect a machine for this work, but so far nothing has been offered that will remove the cotton as cleanly or as thoroughly from the boll as the fingers. Cotton picking is a work that men, women and children can engage in, and during the season on the Southern plantations every negro not engaged in some other occupation is set to picking cotton. This work is paid for by the "piece." An able-bodied man can pick from 150 to 200 pounds between daylight and dark, and he is paid on an average of 40 cents a hundred pounds. In 1795 the second cotton mill in the United States was erected in Rhode Island. From that time the business increased, having its centre in New England, but within the past few years the South has entered largely into manufacturing, many mills having been built in the various States, most of which are now in successful operation.

The operatives in the Southern cotton factories are obtained chiefly from the mountaineer and "sand hill" classes of whites, who make good unskilled workmen. Attempts have been made to run factories with negro operatives, but these have been generally unsuccessful, owing to the difficulty in persuading the negro to keep at regular employment of this kind with a stated salary. The opening of cotton factories in the South has brought up the question of child labor in that section and several States have recently passed laws forbidding the employment of children in factories except under certain restrictions as to age and hours of work. The exacting work taxes a child's mental and physical vigor.

Coffee Statistics.*

FURNISHED BY C. I. HUDSON & CO., 36 WALL STREET, MEMBERS OF THE COFFEE EXCHANGE.

(Copyright, 1901, by the Coffee Exchange of the City of New York.)

The coffee tree originated in Abyssinia and derives its name from the city of Kuffa. It was introduced into Europe in 1573, and although it did not at first meet with much favor, it soon was largely consumed. Its growth was started in Martinique in 1723. Its cultivation spread to other islands of the West Indies, and then to Brazil, whence now comes the greater part of the coffee consumed in this country.

Naturalists reduce the trees which produce the numerous varieties to three great types, which can be easily recognized by those who are conversant with the cultivation of coffee. The plants from Arabia have not many leaves and are slender in appearance, as it is natural they should be, as they are grown in the desert, but they have great vitality, which condenses and gives to the beans a perfume which has not been equalled as yet by any artificial method of cultivation.

The second type, the "African" coffee, is distinguished by its different appearance, due to the marshy plains from which it comes. Its leaves are broad and abundant, and the planter is recompensed by the weight, though not by the quality, of the product, because African coffee yields a liquor of poor quality.

Finally, the third type, which may be of great importance in the future, is the coffee discovered some years ago in Brazil, and which was called Maragojipe. It is distinguished by the abundant crop which it produces, besides which the bean is very much larger and has a surface of a silklike and polished appearance, with excellent aromatic qualities. The principal coffee-producing countries are now Mexico, Costa Rica, Salvador, Guatemala, Honduras, Nicaragua, Bolivia, Brazil, Colombia, Ecuador, Paraguay, Peru, Venezuela, the West Indies, Asia, Oceanica, Polynesia and Australia.

1899	4,732,135	1893	3,434,756	1887	3,074,534	1881	2,307,731
1898	4,321,272	1892	3,709,354	1886	2,874,172		
1897	4,188,096	1891	3,466,551	1885	2,717,795		

Wool.

The only States which show any considerable actual increase in the number of sheep since 1901 are Montana and Wyoming. In the former the increase is 555,000 and in the latter 1,036,000. The number of sheep east of the Mississippi continues to steadily decline. Most of the territorial States have reached the limit of their production. The situation offers little encouragement that we are likely to have a domestic supply of wool equal to the domestic requirements.

STATISTICS OF WOOL IN THE UNITED STATES.

1899-1900	2,878,904	5,590,992	8,469,896	1902-1903	3,989,312	5,825,803	9,815,112

Sugar Beets in the United States.

Experiments during the last few years to determine the possibility of profitable sugar beet cultivation have placed this industry in an important position in parts of the West. It has been shown that clay loam soils produce the highest tonnage, while muck soils produce beets so low in sugar as to make them unprofitable. Thorough cultivation, suitable soil, moisture and warm Summers seem to be necessary to the cultivation of the beet. Several States pay bounties on sugar beets delivered at factories, and some of them encourage farmers by offering rewards for the highest tonnage per acre and the largest per cent of sugar. It has been shown that sugar beets can be grown with more or less profit in nearly every State.

Highest and Lowest Prices of Stocks from 1892 to 1903.

(Compiled by the Wall Street Journal.)

The following tables show the range of prices in the principal exchanges for railway and industrial stocks from 1892 to Oct. 20, 1903:

TABLE OF MARGINS AND COMMISSIONS.

Stocks, Produce, Etc.	Minimum Amount Carried on Margin.	Margin or Deposit Usually Required.
Stocks	100 shares	10 per cent par value	*$1,000
Grain options (New York market)	5,000 bushels	5c. per bushel	250
Grain options (Chicago market)	5,000 bushels	5c. per bushel	250
Lard options (New York Market)	250 tierces—85,000 pounds	½c. per pound	425
Lard options (Chicago market)	250 tierces—85,000 pounds	½c. per pound	425
Pork options (Chicago market)	250 barrels	$1.00 per barrel	250
Short ribs options (Chicago market)	50,000 pounds	½c. per pound	250
Cotton options (New York market)	100 bales—50,000 pounds	$1.00 per bale	100
Coffee options (New York market)	250 bags—32,500 pounds	1c. per pound	325
Silver bullion certificates	1,000 ounces	10c. per ounce	100

Stocks, Produce, Etc.	Commissions for Round Trade.		Smallest Fluctuations.	
Stocks	¼ of 1 per cent par value	*$25.00	⅛ of 1 per cent par value	*$12.50
Grain options (New York market)	⅛ of 1c. per bushel	6.25	†⅛ of 1c. per bushel	6.25
Grain options (Chicago market)	⅛ of 1c. per bushel	6.25	†⅛ of 1c. per bushel	6.25
Lard options (New York Market)	5c. per tierce	12.50	1c. per 100 pounds	8.50
Lard options (Chicago market)	5c. per tierce	12.50	2½c. per 100 pounds	21.25
Pork options (Chicago market)	5c. per barrel	12.50	2½c. per barrel	6.25
Short ribs options (Chicago market)	2½c. per 50,000 pounds	12.50	2½c. per 50,000 pounds	12.50
Cotton options (New York market)	10c. per bale	10.00	1 point	5.00
Coffee options (New York market)	8c. per bag	20.00	½c. per 100 pounds	16.25
Silver bullion certificates	¼ of 1c. per ounce	2.50	⅛ of 1c. per ounce	1.25

*Shares of the par value of $100 each have been taken as the basis, but if 100 shares of half-stock (par value $50 each) were bought, the figures, of course, would be reduced one-half. Amount of margin required depends upon the stock carried. †One-sixteenth fluctuations are sometimes made, but the regular quotations are ⅛ of 1c. per bushel.

Foreign Trade of the United States.

EXPORTS.

Internal Revenue Collectors.

The following list of internal revenue collectors and the districts to which they have been assigned was prepared for The American Almanac by the Collector of Internal Revenue:

District.	Name of Collector.	Address.	District.	Name of Collector.	Address.
Alabama	Jos. O. Thompson	Birmingham.	Nebraska	E. B. Stephenson.	Omaha.
Arkansas	F. W. Tucker	Little Rock.	New Hampshire	J. A. Wood	Portsmouth.
1st California	J. C. Lynch	San Francisco.	1st New Jersey	Isaac Moffett	Camden.
4th California	H. C. Bell	Sacramento.	5th New Jersey	H. C. H. Herold.	Newark.
Colorado	F. W. Howbert	Denver.	New Mexico	A. L. Morrison	Santa Fe.
Connecticut	W. F. Kinney	Hartford.	1st New York	E. B. Jordan	Brooklyn.
Dakota, North	H. Ellerman	Aberdeen, S. D.	2d New York	C. H. Treat	New York, N. Y.
Dakota, South	H. Ellerman	Aberdeen, S. D.	3d New York	F. Eidman	New York, N. Y.
Florida	J. E. Lee	Jacksonville.	14th New York	J. G. Ward	Albany.
Georgia	H. A. Rucker	Atlanta.	21st New York	Peter E. Garlick	Syracuse.
Hawaii	R. H. Chamberlin	Honolulu.	28th New York	A. D. Sanders	Rochester.
1st Illinois	H. L. Hertz	Chicago.	4th North Carolina	E. C. Duncan	Raleigh.
5th Illinois	P. G. Rennick	Peoria.	5th North Carolina	H. S. Harkins	Asheville.
8th Illinois	I. R. Mills	Springfield.	1st Ohio	B. Bettmann	Cincinnati.
13th Illinois	W. H. Powell	East St. Louis.	10th Ohio	G. P. Waldorf	Toledo.
6th Indiana	A. E. Nowlin	Lawrenceburg.	11th Ohio	J. C. Entrekin	Chillicothe.
7th Indiana	J. R. Bonnell	Terre Haute.	18th Ohio	F. McCord	Cleveland.
3d Iowa	J. U. Sammis	Dubuque.	Oregon	D. M. Dunne	Portland.
4th Iowa	H. O. Weaver	Burlington.	1st Pennsylvania	William McCoach.	Philadelphia.
Kansas	J. M. Simpson	Leavenworth.	9th Pennsylvania	H. L. Hershey	Lancaster.
2d Kentucky	E. T. Franks	Owensboro.	12th Pennsylvania	T. F. Penman	Scranton.
5th Kentucky	J. A. Craft	Louisville.	23d Pennsylvania	D. B. Heiner	Pittsburg.
6th Kentucky	G. W. Lieberth	Covington.	South Carolina	M. J. Jenkins	Columbia.
7th Kentucky	S. J. Roberts	Lexington.	2d Tennessee	A. J. Tyler	Bristol.
8th Kentucky	James Denton	Danville.	5th Tennessee	J. E. McCall	Nashville.
Louisiana	William E. Howell	New Orleans.	3d Texas	Webster Flanagan	Austin.
Maryland	P. L. Goldsborough	Baltimore.	4th Texas	P. B. Hunt	Dallas.
3d Massachusetts	J. D. Gill	Boston.	2d Virginia	Asa Rogers	Richmond.
1st Michigan	David Meginnity	Detroit.	6th Virginia	Park Agnew	Alexandria.
4th Michigan	S. M. Lemon	Grand Rapids.	Washington	Benj. D. Crocker	Tacoma.
Minnesota	F. Von Baumbach.	St. Paul.	West Virginia	T. E. Davis	Parkersburg.
1st Missouri	Ben Westhus	St. Louis.	1st Wisconsin	Henry Fink	Milwaukee.
6th Missouri	F. D. Roberts	Kansas City.	2d Wisconsin	J. G. Monahan	Madison.
Montana	E. H. Callister	Salt Lake City, Ut'h

Internal Revenue Collectors.

The following list of internal revenue collectors and the districts to which they have been assigned was prepared for The American Almanac by the Collector of Internal Revenue:

District.	Name of Collector.	Address.	District.	Name of Collector.	Address.
Alabama	Jos. O. Thompson	Birmingham.	Nebraska	E. B. Stephenson.	Omaha.
Arkansas	F. W. Tucker	Little Rock.	New Hampshire	J. A. Wood	Portsmouth.
1st California	J. C. Lynch	San Francisco.	1st New Jersey	Isaac Moffett	Camden.
4th California	H. C. Bell	Sacramento.	5th New Jersey	H. C. H. Herold.	Newark.
Colorado	F. W. Howbert	Denver.	New Mexico	A. L. Morrison	Santa Fe.
Connecticut	W. F. Kinney	Hartford.	1st New York	E. B. Jordan.	Brooklyn.
Dakota, North	H. Ellerman	Aberdeen, S. D.	2d New York	C. H. Treat	New York, N. Y.
Dakota, South	H. Ellerman	Aberdeen, S. D.	3d New York	F. Eidman	New York, N. Y.
Florida	J. E. Lee	Jacksonville.	14th New York	J. G. Ward	Albany.
Georgia	H. A. Rucker	Atlanta.	21st New York	Peter E. Garlick	Syracuse.
Hawaii	R. H. Chamberlin	Honolulu.	28th New York	A. D. Sanders	Rochester.
1st Illinois	H. L. Hertz	Chicago.	4th North Carolina	E. C. Duncan	Raleigh.
5th Illinois	P. G. Rennick	Peoria.	5th North Carolina	H. S. Harkins	Asheville.
8th Illinois	I. R. Mills	Springfield.	1st Ohio	B. Bettmann	Cincinnati.
13th Illinois	W. H. Powell	East St. Louis.	10th Ohio	G. P. Waldorf	Toledo.
6th Indiana	A. E. Nowlin	Lawrenceburg.	11th Ohio	J. C. Entrekin	Chillicothe.
7th Indiana	J. R. Bonnell	Terre Haute.	18th Ohio	F. McCord	Cleveland.
3d Iowa	J. U. Sammis	Dubuque.	Oregon	D. M. Dunne	Portland.
4th Iowa	H. O. Weaver	Burlington.	1st Pennsylvania	William McCoach.	Philadelphia.
Kansas	J. M. Simpson	Leavenworth.	9th Pennsylvania	H. L. Hershey	Lancaster.
2d Kentucky	E. T. Franks	Owensboro.	12th Pennsylvania	T. F. Penman	Scranton.
5th Kentucky	J. A. Craft	Louisville.	23d Pennsylvania	D. B. Heiner	Pittsburg.
6th Kentucky	G. W. Lieberth	Covington.	South Carolina	M. J. Jenkins	Columbia.
7th Kentucky	S. J. Roberts	Lexington.	2d Tennessee	A. J. Tyler	Bristol.
8th Kentucky	James Denton	Danville.	5th Tennessee	J. E. McCall	Nashville.
Louisiana	William E. Howell	New Orleans.	3d Texas	Webster Flanagan	Austin.
Maryland	P. L. Goldsborough	Baltimore.	4th Texas	P. B. Hunt	Dallas.
3d Massachusetts	J. D. Gill	Boston.	2d Virginia	Asa Rogers	Richmond.
1st Michigan	David Meginnity	Detroit.	6th Virginia	Park Agnew	Alexandria.
4th Michigan	S. M. Lemon	Grand Rapids.	Washington	Benj. D. Crocker	Tacoma.
Minnesota	F. Von Baumbach.	St. Paul.	West Virginia	T. E. Davis	Parkersburg.
1st Missouri	Ben Westhus	St. Louis.	1st Wisconsin	Henry Fink	Milwaukee.
6th Missouri	F. D. Roberts	Kansas City.	2d Wisconsin	J. G. Monahan	Madison.
Montana	E. H. Callister	Salt Lake City, Ut'h			

National and State Railroad Commissions.

The Interstate Commerce Commission, Washington, D. C.—Martin A. Knapp, of New York, Chairman; Judson C. Clements, of Georgia; James D. Yeomans, of Iowa; Charles A. Prouty, of Vermont; Joseph W. Fifer, of Illinois; Edward A. Moseley, Secretary; Martin S. Decker, Assistant Secretary.

State Railroad Commissions.—This list also includes the State boards and officers to whom railroad companies are required to make annual reports.

Alabama Railroad Commission, Montgomery, Ala.—John V. Smith, President, Montgomery, Ala.; A. E. Caffee, Birmingham, Ala.; W. C. Tunstall, Greensboro, Ala.; Virgil C. Griffin, Secretary, Montgomery, Ala.

Railroad Commission of Arkansas, Little Rock, Ark.—Jeremiah G. Wallace, Chairman, Little Rock, Ark.; Abner Gaines, Little Rock, Ark.; Felix M. Hanley, Little Rock, Ark.; Howard Robb, Secretary, Little Rock, Ark.

California Railroad Commission, San Francisco, Cal.—E. B. Edson, Chairman, Gazelle, Cal.; C. S. Laumeister, San Francisco, Cal.; N. Blackstock, Ventura, Cal.; Wm. T. Sesnon, Secretary, 70 and 71 Chronicle Bldg., San Francisco, Cal.

Connecticut Board of Railroad Commissioners, Hartford, Conn.—W. F. Willcox, Chairman, Chester, Conn.; William O. Seymour, Ridgefield, Conn.; O. R. Fyler, Torrington, Conn.; Henry F. Billings, Clerk, Hartford, Conn.

Colorado.—State Board of Equalization.—A. B. Gray, Secretary, Denver, Colo.

Delaware.—No reports required.

Railroad Commissioners for the State of Florida, Tallahassee, Fla.—Henry E. Day, Chairman, Gainesville, Fla.; John M. Bryan, Kissimmee, Fla.; John L. Morgan, White Springs, Fla.; Royal C. Dunn, Secretary, Tallahassee, Fla.

Railroad Commission of Georgia, Atlanta, Ga.—Spencer R. Atkinson, Chairman, Atlanta, Ga.; J. P. Brown, Hawkinsville, Ga.; G. Gunby Jordan, Columbus, Ga.; J. D. Massey, Secretary, Atlanta, Ga.

Idaho.—State Board of Equalization.—E. W. Jones, State Auditor and Secretary, Boise City, Idaho.

Railroad and Warehouse Commission of Illinois, Springfield, Ill.—James S. Neville, Chairman, Bloomington, Ill.; Arthur L. French, Chapin, Ill.; William Kilpatrick, Secretary, Springfield, Ill.; Chas. J. Smith, Assistant Secretary, Springfield, Ill.

Indiana.—Board of Tax Commissioners.—Winfield T. Durbin, Governor, Chairman, Indianapolis, Ind.; Union B. Hunt, Secretary of State, Indianapolis, Ind.; W. H. Hart, Auditor of State, Indianapolis, Ind.; Parks M. Martin, Commissioner, Spencer, Ind.; John C. Wingate, Commissioner, Wingate, Ind.

Iowa Board of Railroad Commissioners, Des Moines, Ia.—E. A. Dawson, Chairman, Waverly, Ia.; D. J. Palmer, Washington, Ia.; Ed. C. Brown, Sheldon, Ia.; Dwight N. Lewis, Secretary, Des Moines, Ia.

Kansas Railroad Commission, Topeka, Kan.—A. D. Walker, Chairman; J. C. O. Morse, J. N. Fike; W. H. Smith, Secretary.

Kentucky Railroad Commission, Frankfort, Ky.—C. C. McChord, Chairman, Springfield, Ky.; John C. Wood, Mt. Sterling, Ky.; J. F. Dempsey, Madisonville, Ky.; Murray R. Hubbard, Secretary, Frankfort, Ky.

Railroad Commission of Louisiana, Baton Rouge, La.—C. L. de Fuentes, Chairman, New Orleans, La.; Overton Cade, Youngsville, La.; W. L. Foster, Shreveport, La.; W. M. Barrow, Secretary, Baton Rouge, La.

Railroad Commissioners of Maine, Augusta, Me.—Joseph B. Peaks, Chairman, Dover, Me.; B. F. Chadbourne, Biddeford, Me.; Parker Spofford, Bucksport, Me.; E. C. Farrington, Clerk, Augusta, Me.

Maryland.—Buchanan Schley, State Tax Commissioner, Annapolis, Md.

Massachusetts Board of Railroad Commissioners, 20 Beacon Street, Boston, Mass.—James F. Jackson, Chairman, Fall River, Mass.; George W. Bishop, Newtonville, Mass.; Clinton White, Melrose, Mass.; William A. Crafts, Clerk, Boston, Mass.; Fred E. Jones, Accountant, Brookline, Mass.; George F. Swain, Bridge Engineer, Boston, Mass.; William J. McCullough, Assistant Clerk, Boston, Mass. Railroad Inspectors—Daniel M. Wheeler, Worcester, Mass.; Grafton Upton, Everett, Mass.; John Q. Hennigan, East Milton, Mass.; Lewellyn H. McLain, Melrose, Mass.

Michigan Commissioner of Railroads, Lansing, Mich.—Chase S. Osborn, Commissioner of Railroads, Lansing, Mich.; Charles H. Chapman, Deputy Commissioner of Railroads, Lansing, Mich.; James Bice, Mechanical Engineer, Lansing, Mich.

Minnesota Railroad and Warehouse Commissioners, St. Paul, Minn.—Ira B. Mills, Chairman, St. Paul, Minn.; Jos. G. Miller, St. Paul, Minn.; C. F. Staples, St. Paul, Minn.; A. C. Clausen, Secretary, St. Paul, Minn.

Mississippi Railroad Commission, Jackson, Miss.—J. D. McInnis, President, Meridian, Miss.; J. C. Kincannon, Tupelo, Miss.; A. Q. May, Jackson, Miss.; Jno. A. Webb, Secretary, Jackson, Miss.

Missouri Railroad and Warehouse Commission, Jefferson City, Mo.—T. J. Hennessey, Chairman, Jefferson City, Mo.; Wm. E. McCully, Jefferson City, Mo.; Jos. P. Rice, Jefferson City, Mo.; T. M. Bradbury, Secretary, Jefferson City, Mo.

Montana.—J. H. Calderhead, State Auditor, Helena, Mont.

Nebraska Board of Equalization. — Vacant; State Auditor, Lincoln, Neb.

Nevada.—Eugene Howell, Secretary of State, Carson City, Nev.

New Hampshire Railroad Commission, Concord, N. H.—Henry M. Putney, Chairman, Manchester, N. H.; Francis C. Faulkner, Keene, N. H.; Edward B. S. Sanborn, Clerk, Franklin Falls, N. H.

New Jersey.—J. Willard Morgan, Comptroller, Trenton, N. J.

Board of Railroad Commissioners of the State of New York, Albany, N. Y.—John O'Donnell, John D. Kernan, W. E. Rogers, Isaac V. Baker, Jr., Michael Rickard, S. A. Beardsley, Alfred C. Chanin, Joseph M. Dickey, Frank M. Baker and George W. Dunn.

North Carolina Corporation Commission, Raleigh, N. C.—Franklin McNeill, Chairman, Raleigh, N. C.; Sam. L. Rogers, Raleigh, N. C.; Dr. D. H. Abbott, Raleigh, N. C.; H. C. Brown, Secretary, Raleigh, N. C.; E. G. Riddick, Stenographer, Raleigh, N. C.

North Dakota Commissioners of Railroads, Bismarck, N. D.—C. J. Lord, President, Cando, N. D.; J. J. Youngblood, Fessenden, N. D.; J. F. Shea, Wahpeton, N. D.; C. C. Hammond, Secretary, Ashley, N. D.

Ohio Commissioner of Railroads and Telegraphs, Columbus, O.—J. C. Morris, Commissioner, Columbus, O.; Harry E. King, Chief Clerk, Columbus, O.; E. H. Hanna, Statistical Clerk, Columbus, O.; W. O. Jackson, Chief Inspector, Springfield, O.; O. F. McJunkin, Deputy Inspector, Dayton, O.; D. S. Archer, Stenographer, Columbus, O.; R. L. Williams, Messenger, Columbus, O.

Oregon Railroad Commission.—Abolished by the Legislature, October, 1898.

Pennsylvania.—Department of Internal Affairs, Harrisburg, Pa.—Isaac B. Brown, Superintendent Bureau of Railways, Harrisburg, Pa.

Rhode Island Railroad Commission, Room 121, State House, Providence, R. I.—E. L. Freeman, Commissioner, Providence, R. I.; J. W. Freeman, Deputy, Central Falls, R. I.

South Carolina Railroad Commissioners, Columbia, S. C.—J. C. Wilborn, Chairman, Old Point, S. C.; C. W. Garris, Bamburg, S. C.; J. H. Wharton, Waterloo, S. C.; D. P. Duncan, Secretary, Columbia, S. C.

South Dakota Railroad Commissioners, Sioux Falls, S. D.—W. G. Smith, Chairman, Sturgis, S. D.; Alex. Kirkpatrick, Wessington, S. D.; Frank Le Cocq, Jr., Harrison, S. D.; Wm. H. Stanley, Secretary, Sioux Falls, S. D.; D. C. Ricker, Scale and Warehouse Inspector, Sioux Falls, S. D.; T. B. McMartin, Legal Counsel, Sioux Falls, S. D.

Tennessee Railroad Commissioners, Nashville, Tenn.—N. W. Baptist, Chairman; J. N. McKenzie, Thos. L. Williams, Frank Avent, Secretary.

Railroad Commission of Texas, Austin, Tex.—John H. Reagan, Chairman, Austin, Tex.; L. J. Storey, Austin, Tex.; Allison Mayfield, Austin, Tex.; E. R. McLean, Secretary, Austin, Tex.

Vermont State Railroad Commissioners, Montpelier, Vt.—Jonathan Ross, Chairman, St. Johnsbury, Vt.; James M. Boutwell, Montpelier, Vt.; Henry S. Bingham, Bennington, Vt.; E. M. Harvey, Clerk, Montpelier, Vt.

Virginia Railroad Commission, Richmond, Va.—James C. Hill, Chairman, Richmond, Va.; E. G. Akers, Secretary, Richmond, Va.

Washington.—No reports required.

West Virginia.—Arnold C. Scherr, State Auditor, Charleston, W. Va.

Wisconsin Railroad Commissioner, Madison, Wis.—Graham L. Rice, Commissioner, Madison, Wis.; James S. Stack, Deputy Commissioner, Madison, Wis.

Wyoming Board of Equalization.—George E. Abbott, State Treasurer, President, Cheyenne, Wyo.; Le Roy Grant, State Auditor, Secretary, Cheyenne, Wyo.; Fenimore Chatterton, Secretary of State, Member, Cheyenne, Wyo.; F. J. Niswander, Clerk, Cheyenne, Wyo.

Statistics of Railroads.

RAILROAD MILEAGE IN THE UNITED STATES.

The railway mileage of the United States has at last passed the 200,000 mile mark. The figures at the close of 1901 were practically 200,000, or 196,075 to be exact, but the work of construction during 1902 brought the total up to 201,672.83. The construction work on 155 lines alone during the first six months of 1902 aggregated 2,314 miles, which was nearly 500 miles in excess of the record of any six-month period for some time, while the total construction of the year was 5,234 miles, or about twelve miles more than was built during the previous twelve months.

The following table of railroad mileage in the United States is from the latest report of the United States Interstate Commerce Commission:

Year.	Official.	Unofficial.	Total.	Proportion to total mileage.	Increase over June 30, 1899.	Number of miles of line per 100 square miles of territory.	Number of miles of line per 10,000 inhabitants.
1902	201,672.83	799.02	202,471.85	100	5,234.41	6.82	25.76
1901	196,075.07	1,162.37	197,237.44	100	3,891.66	6.64	25.52
1900	192,940.67	405.11	193,345.78	100.	4,051.12	6.51	25.44
1899	188,277.49	1,017.17	189,294.66	100.	2,898.34	6.37	25.34
1898	185,370.77	1,025.55	186,396.32	100.	1,967.85	6.28	25.40
1897	182,919.82	1,508.65	184,428.47	100.	1,651.84	6.21	25.59
1896	181,153.77	1,622.86	182,776.63	100.	2,119.16	6.15	25.82
1895	179,175.51	1,481.96	180,657.47	100.	1,948.92	6.08	26.00
1894	176,602.61	2,105.94	178,708.55	100.	2,247.48	6.02	26.22
1893	170,332.30	6,128.77	176,461.07	100.	4,897.55	5.94	26.39
1892	165,690.97	5,872.55	171,563.52	100.	3,160.78	5.78	26.17
1891	164,602.79	3,799.95	168,402.74	100.	4,805.69	5.67	26.21
1890	159,271.74	4,325.31	163,597.05	100.	5,838.22	5.51	25.99

MILEAGE FROM 1830 TO 1902.

1900	191,511	373,226,581	584,695,935	16,313,284,471	331,402,816	2.031	56.67	88.79	1,730	3,053	43.22	27.90
1901	193,823	391,543,708	600,485,790	17,789,669,925	360,702,686	2.028	60.07	92.12	1,861	3,098	45.43	29.63
1902	196,648	403,213,178	655,130,236	19,706,908,785	396,513,412	2,012	60.52	98.34	2,016	3,331	48.87	30.08

The mileage operated in 1897, 1898, 1899, 1900 and 1902, as above, is exclusive of switching railroads, which in 1897 were 741.37 miles, in 1898 338.85 miles, in 1899 310.61 miles, in 1900 350.72 miles, in 1901 462.28 miles and in 1902 448.88 miles; these roads not reporting details of passenger traffic or earnings. For the same reason the mileage of switching railroads is omitted from the group tables following:

FREIGHT TRAFFIC—1888 TO 1902.

Falling from cars or engines, or while getting on or off	33	367	67	654	537	6,867
Other causes	117	444	561	9,641	952	15,049
Total (other than train accidents)	181	1,289	648	10,688	1,819	28,665
Total all classes	187	1,362	701	11,145	2,516	33,711

Comparisons of the principal totals with those for the two years preceding and with 1893 (years ending June 30) may be made from the following table, the figures for 1901, 1900 and 1893 being taken from the statistician's tables, made up from the railroad companies' annual reports. It is to be borne in mind that the number of men employed by the railroads has been constantly increasing. It was much larger in 1902 than in 1893; but precise figures for the later year have not yet been compiled. On the other hand, a comparison of the coupling accidents recorded in the table for 1902 with the same for 1893 shows the remarkable and gratifying results of the safety-appliance act of 1893, which requires the use of automatic couplers and which went into full effect on August 1, 1900. The number of employes killed shows a diminution of 68 per cent, and this notwithstanding the fact that there is now engaged in this work a much larger number of men than in 1893. The diminution in the number injured is still greater, being no less than 81 per cent. The summary is as follows:

Nature of Accident.	1902.		1901.		1900.		1893.	
	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
Passengers in train accidents	167	3,586	110	2,338	93	1,999	100	1,703
Other causes	136	2,503	172	2,650	156	2,129	199	1,526
Totals	303	6,089	282	4,988	249	4,128	299	3,229
Employes in train accidents	697	5,046	586	2,773	539	3,288	525	3,008
Falling from cars, etc	537	6,867	599	6,371	529	4,425	644	3,780
Overhead obstructions, etc	104	1,070	56	509	56	436	73	444
In coupling accidents	143	2,113	198	2,768	282	5,229	433	11,277
Other causes	1,035	18,615	1,236	27,421	1,144	26,265	1,052	13,220
Totals	2,516	33,711	2,675	41,142	2,550	39,643	2,727	31,729
Total passengers and employes	2,819	39,800	2,957	46,130	2,799	43,771	3,026	34,958

RAILROAD RECORDS.

The tables given below show the fastest recorded runs and the highest speeds obtained by railroads in the United States and other countries. Many of these runs were speed tests, made under the most favorable conditions, while others were accomplished by trains on regular runs, when there was time to be made up or emergencies to be met.

No unusually notable fast runs were made in the United States during 1903. On May 25 a train on the Lake Shore Railroad made the run from Toledo to Elkhart, a distance of 133.4 miles, in one hour and fifty-four minutes, or at an average speed of 70.2 miles an hour. A New York Central train in March did 91 miles at a speed of 71 miles an hour. The fastest long distance run of the year was made by an Atchison, Topeka & Santa Fe train, between Chicago and Los Angeles, a distance of 2,267 miles. This was made in 52 hours and 49 minutes, or at an average speed of 42.8 miles an hour, including stops.

The fastest recorded time ever made was accomplished on the military road between Marienfelde and Zossen, in Germany, on October 6, 1903, when a speed of 125.8 miles an hour was developed. This road is electrically operated, by the three-phase system. The car used in the test was equipped with four motors, capable of developing 1,100 horse power. At this rate of speed Philadelphia could be reached from New York in 43 minutes, and the distance from New York to Buffalo, 439½ miles, could be made in three hours and a half. Another test made on the Marienfelde-Zossen road later in October was reported to have resulted in a speed of more than 130 miles an hour.

The problems of overcoming air resistance and of eliminating grades, curves and "grade crossings" are awaiting solution before the 200 miles an hour train will be a thing of general utility. That the feat will eventually be accomplished there is no doubt.

SPEED OF TRAINS.

The fastest time for a short distance was made by the N. Y. C. & H. R. R. R., which ran a mile from Grimesville, May 9, 1893, in 35 seconds, being at the rate of 102.8 miles an hour. The same road runs a train from New York to Chicago, 964 miles, in 19 hours and 57 minutes, which is at the rate of 48.2 miles an hour.

The following is a list of all the notably fast runs made by the different railroads within the last twenty-three years.

(Prepared expressly for The American Almanac by the Railroad Gazette.)

Oldest War Veteran in America.

On the pension rolls of the United States Government there is carried the name of one survivor of the War of 1812. He is Hiram S. Cronk, of Ava, Oneida County, N. Y., and in point of service he is probably the oldest war veteran in the world, as he certainly is the oldest in the United States. Mr. Cronk, who lives with his daughter, Mrs. Sarah Rowley, was born in Frankfort, Herkimer County, N. Y., April 19, 1800. During the war with England, which began in 1812, he enlisted on August 14, 1814, under Captain Edmund Fuller in the New York Volunteers, his father, James Cronk, and his two brothers, John and Casper, enlisting in the same regiment on the same day. All four served in the defence of Sackett's Harbor, and all were honorably discharged from the army when the war ended. Hiram S. Cronk is the last survivor of this fighting family, his father and brothers having died years ago, each attaining a ripe old age. Mr. Cronk drew a pension of $12 per month for many years, and Congress, at the session of 1902-3, increased the allowance to $25 per month. Mr. Cronk, although in the 104th year of his age, is a man in whose strong and thoughtful face there is as yet no evidence of senility, and he would readily pass for a well-preserved man of seventy years.

Living Expenses in United States.

(Material Furnished by the Bureau of Labor.)

The eighteenth annual report of the Bureau of Labor for 1903 presents results of an extended investigation into the cost of living of workingmen's families and the retail prices of staple articles of food used by such families. The figures of income and expenditure furnished in detail by 2,567 families in thirty-three States, representing the leading industrial centres of the country, formed the material for the study of the cost of living.

This is the first year that figures covering all sections of the country could be obtained. Heretofore the only detailed statistics were furnished by the Massachusetts Bureau of statistics of Labor, and referred to New England only. The figures of the Bureau of Labor, covering the entire country, form a much more valuable basis for comparisons.

The following tables show: First, the average size of family, average income and average expenditure; second, the per cent of increase in retail prices of food in 1902 over previous years, and third, average cost of food per family from 1890 to 1902, alternate years:

NUMBER OF FAMILIES, AVERAGE SIZE OF FAMILY, AVERAGE INCOME PER FAMILY, AVERAGE EXPENDITURE PER FAMILY FOR ALL PURPOSES, AND AVERAGE EXPENDITURE PER FAMILY FOR FOOD, DURING THE YEAR 1901.

Geographical Divisions.	Families.	Average Size of Family.	Average Income Per Family.	Average Expenditure Per Family for All Purposes.	Average Expenditure Per Family for Food.
North Atlantic States	1,415	5.25	$834.83	$778.04	$338.10
North Central States	721	5.46	842.60	785.95	321.60

1902	356.83	338.57	312.33	310.75	322.43	344.61

*Decrease.

Comparative Wealth of the World.

The tables given below are based on estimates made from the latest obtainable figures, and are calculated to give an approximate comparison of the wealth of the principal countries of the world in farm lands, railroads, buildings, furniture, merchandise, bullion and sundries. The table specifies which years the figures represent.

Many attempts have been made to furnish such a comparative table and a marked difference is found in the result of various statisticians who have undertaken the task. One of the most elaborate tables of wealth was prepared by Colquhoun, in 1812, who, however, was obliged to base his estimate on very incomplete returns, which rendered his work of comparative value only to the modern student. Mulhall has compiled several tables of this kind and it is from his latest figures as a foundation that the table below was constructed.

THE WEALTH OF THE WORLD BY NATIONS.

Country.	In Millions of Dollars, 000,000's Omitted.							
	Farms.	Railways.	Buildings.	Furniture.	Merchandise.	Bullion.	Sundries.	Total.

Distribution of Coal in the United States.

Coal is found in commercial quantities in twenty-seven of the States and Territories of the United States and in Alaska. The following table, which shows the areas of coal-bearing formations in the several States and the rank of the coal-producing States in area and production, was prepared by Charles Willard Hayes and published by the United States Geological Survey:

RANK OF COAL FIELDS AND COAL-PRODUCING STATES IN AREA AND PRODUCTION.

Coal Fields and State or Territory.	Area of Coal Bearing Formations. Sq. Miles.	Probable Per cent. Productive.	Rank of Field and State in Area.	1900. Production.	1900. Average Price Per Ton.	1900. Per cent. of Total Production.	1900. Rank in Production.

Legislation by the Fifty-Seventh Congress.

SECOND SESSION.

The second session of the Fifty-seventh Congress ended on March 4. During the session upward of 170 public acts, not including general appropriations, were passed and received the approval of the President. What are known as private acts which were passed and received the President's approval number more than 1,200, of which a large proportion were pension acts. The number of bills and resolutions introduced during the two sessions was 18,420, and reports were made on 2,810 bills and resolutions. Fifteen members of the House of Representatives died during the Congress, seven resigned and two were unseated.

The total appropriations for the second session amounted to $735,058,506, a reduction of $47,565,990 from the amount appropriated at the first session. The principal item in the public works appropriations was $20,426,000 for additions to the navy. There was a net increase of 9,501 in new offices and employes, amounting, in salaries, to $6,986,158. The total appropriations made by the Fifty-seventh Congress, both sessions, amounted to $1,553,683,002, an increase over the Fifty-sixth Congress of $113,193,567.

Department of Commerce and Labor.—An act creating a new department of the Government makes provision for the regulating of commerce and labor and allied matters. One of its most important provisions is that compelling corporations engaged in interstate commerce to make full reports on their affairs.

Army and Navy Legislation.—Legislation of importance to the army and navy was passed. A general staff corps was created for the army, the duties of which are to prepare plans for the defense of the country and for the mobilization of armies in time of war. A militia law provides for the general organization under Federal supervision of the militia of the United States and makes it available when its services may be required by the Government. The Naval Appropriation bill provides for a material increase in the personnel of the navy to meet the growing demand for officers and men, and also for an increase in the number of warships.

Philippine Legislation.—An appropriation of $3,000,000 was made to relieve the distress and suffering caused by the ravages of disease among the water buffalo in the islands and the distress resulting from the shortage of crops. A uniform currency system

for the Philippines was provided. The efficiency of the Philippine constabulary is promoted by another bill, and still another provides for the extradition of criminals to and from the islands.

Hawaiian Legislation.—An act was passed providing for the redemption of Hawaiian silver money, and an appropriation was made to pay judgments growing out of the suppression of bubonic plague.

Miscellaneous Acts.—The Sundry Civil bill makes appropriations for carrying forward river and harbor work and Federal building construction, and the Omnibus Public Building bill authorizes a large number of new buildings throughout the United States. The bankruptcy law was amended. A new building, to cost $1,500,000, was authorized for the Department of Agriculture. One of the first acts of the session was to grant, temporarily, rebates of duties on coal of all kinds coming from any foreign country, to relieve the coal shortage caused by the great strike.

Another bill was passed which enables the Attorney-General to expedite suits brought under the Sherman Anti-Trust law, and $500,000 was placed at his disposal for this purpose. Two assistants to the Attorney-General and additional clerks were provided.

Among the acts of minor importance were the following: For the erection at Washington, D. C., of statues of Count Pulaski and Baron von Steuben of the Continental Army; to regulate the immigration of aliens into the United States; to amend the National Banking act, enabling cities of 25,000 to have reserve banks; to refund duties paid on merchandise brought from Porto Rico between April 11, 1899, and May 1, 1900, and from the Philippine Islands between April 11, 1899, and May 8, 1902; to increase the pension of Mexican War survivors to $12 a month.

Cuban Reciprocity and the Panama Canal Treaty.—The Senate met in special session on March 5 to act on the Cuban Reciprocity Treaty and the Panama Canal Treaty, held up during the regular session by filibustering on the Omnibus Statehood bill. On March 17 the Panama Canal Treaty was ratified by a vote of 73 to 5, and on the 19th, by a vote of 50 to 16, the Cuban Reciprocity Treaty was ratified. The former went through without amendments, but the latter was changed to provide that there shall be reciprocity in sugar with no other country than Cuba, requiring the approval of the House of Representatives.

Failures in the United States, 1903.

The Union Label in the United States.

HENRY WHITE, General Secretary United Garment Workers of America.

A union label is a mark or emblem affixed by members of labor unions to articles made by them, as a means of enabling the purchaser to distinguish such goods. The union label is comparatively a recent device and, as far as is known, is of American origin. It was first employed by the cigarmakers in 1880, by the hatters in 1885, by printers in 1887, by the American Federation of Labor in 1890 and by garment workers in 1891. The departments of labor of the European governments are making a study of the union label in this country and treat it as a feature of the American labor movement.

The British unions, which more nearly resemble ours than those of any other country, have not, to any extent, availed themselves of this method of utilizing the purchasing power of the membership. The patronage of the members of the English unions is devoted to co-operative ventures, as a means of saving middlemen's profits, instead of bringing it directly to bear in aid of their cause. British workingmen are now giving some attention to the union label, and as the hatters and printers have one in use, other unions are contemplating its adoption.

The influence that the union label exerts in business is shown by the signs frequently displayed in stores announcing the sale of union made goods, and manufacturers in their catalogues and advertising matter prominently mention the union label.

The unions issuing labels appeal to the members and the public through literature, lectures and advertisements, and publish the names of the wholesale and retail concerns using the label, and immense sums are spent in this way. The United Garment Workers, for example, spent over $50,000 last year for this purpose. The national unions of the respective trades furnish the labels to the local or subordinate unions, which act as the agents or custodians. Through this means the conditions governing their use are determined by the national bodies and uniform rules are enforced. This eliminates local considerations which might operate against the larger purposes of the label and impair its usefulness.

In order to prevent duplication of labels in any trade and as a safeguard against possible misuse, the American Federation of Labor, with which almost all the national unions are affiliated, passes upon them, and only such labels are recognized by the membership as have been endorsed by it.

The union barbers, salesmen, barkeepers and waiters display an official card in the shops, stores, saloons and restaurants employing members. The American Federation of Labor issues a label to all unions not affiliated with national unions.

There are now forty-eight labels and eight cards issued by labor organizations which have been endorsed by the American Federation of Labor. Following is a list of these unions: American Federation of Labor, Bakers and Confectioners, Blacksmiths, Boot and Shoe Workers, Brewery Workers, Brickmakers, Broommakers, Carriage and Wagon Workers, Carvers (wood), Cigarmakers, Cloth Hat and Cap Makers, Coopers, Engravers (watch case), Flour and Cereal Mill Employes, Garment Workers (united), Garment Workers (ladies'), Glass Bottle Blowers, Glass Workers, Gold Beaters, Hatters, Horseshoers, Jewelry Workers, Lathers, Leather Workers on Horse Goods, Machinists, Metal Mechanics (allied), Metal Polishers, Metal Workers (sheet), Moulders, Painters, Piano and Organ Workers, Plate Printers, Powder Workers, Pressmen (printing), Print Cutters, Rubber Workers, Sawsmiths, Shirt Waist and Laundry Workers, Stove Mounters, Tailors, Tobacco Workers, Trunk and Bag Workers, Typographical, Upholsterers, Weavers (goring), Weavers (wire), Woodworkers. These organizations use cards: Actors, Barbers, Clerks, Hotel and Restaurant Employes, Meat Cutters and Butcher Workmen, Musicians, Stage Employes (theatrical), Teamsters.

The following crafts and callings are using the American Federation of Labor label:

Badge and Lodge Paraphernalia Workers, Baking Powder Workers, Bed Spring Makers, Bottlers (soda and mineral waters), Box Makers (paper), Die Sinkers, Distillers and Rectifiers, Mattress Makers (by agreement with Upholsterers' International Union), Medicine Workers, Nail (horseshoe) Workers, Neckwear Cutters and Makers, Oyster Workers, Paint Workers, Photographic Supply Workers, Salt Workers, Soap Workers, Starch Workers, Suspender Makers, Tack Workers, Umbrella Makers, Yeast and Vinegar Makers.

Union labels are protected from counterfeiting and fraudulent use by special laws enacted in nearly all the States, usually with the proviso that such labels have been duly registered with the Secretary of State after the manner of trade marks. Of such laws, that passed by the New Jersey Legislature in 1898 is considered the most efficient. The New Jersey law makes sweeping provisions for the protection of trade marks and labels and establishes penalties that are calculated to deter any would-be counterfeiters or illicit users of registered labels. To secure registration in that State it is necessary to file with the Secretary of State two copies of the design for which registration is desired, and prove satisfactorily that such design is not an infringement in any way of any other design filed for registration by another party.

Several important decisions have recently been rendered by the courts in suits brought against manufacturers for counterfeiting union labels, or using labels printed in such a way as might deceive purchasers.

The Massachusetts Supreme Court issued a permanent injunction in the Spring of 1903 against a shoe manufacturing firm in Lynn, restraining it from using a counterfeit of the boot and shoe workers' label. The company was directed to deliver to the plaintiff to be destroyed all imitations of the label of the Boot and Shoe Workers' Union, and all dies and stamps of such imitations in the possession of the company.

Manufacturers using the union label on their products are required to sign strong agreements with the unions interested before such labels may be used. Most unions have "label wardens" in the shops where labels are used, whose duty it is to see that the labels are properly distributed and used, and who are held responsible for any possible misuse of them.

Cost of Living Since 1860.

In the following table Dun's index number is given for July 1 each year, beginning with 1860. Figures are separated into the seven principal classes for convenience of comparison. Many hundred commodities are embraced in the table, which covers practically all the necessaries of life. In explanation of the index number it should be stated that quantities of each commodity are taken in accordance with the annual per capita consumption, so that no article receives more or less than its relative position of importance. As the same quantities are taken of the same articles at each date, the record gives a faithful representation of the course of prices. Owing to the impossibility of obtaining accurate retail prices wholesale quotations are taken. Consequently, to obtain the actual cost of living per capita it is necessary to add a certain percentage of profit to the retailer. Otherwise the index number shows the actual wholesale cost of a year's supplies of all the necessaries of life for a single individual at each date. There is no question of percentages, the exact figures being given. Thus, products costing $115.19 and one-tenth of a cent on July 1, 1860, rose to $278.98 in 1864, declined to $72.45 in 1897, and were $99.45 at the latest date.

July 1.	Breadstuffs.	Meats.	Dairy and Garden.	Other Food.	Clothing.	Metals.	Miscellaneous.	Total.

NOTE.—The Artillery Corps of the U. S. Army is at present armed with a field gun in no way worthy of comparison with the strictly modern weapons of these European Powers. But orders have been placed for the rapid manufacture of a new field piece, an adaptation of the best features of all types of foreign artillery, constructed under the direction of Capt. C. B. Wheeler, of the U. S. Army. Gen. Wm. Crozier, chief of ordnance, describes it as the superior of any field gun in the world. The regular army will be equipped with the gun during 1904. It is a three-inch rifle, with Gerdom breech mechanism, mounted in azimuth upon the carriage about a vertical pivot. The carriage has a fixed spade trail and lever brake. It will fire a fourteen-pound projectile with an initial velocity of 1,700 feet per second. The recoil-checking device is a single horizontal cylinder beneath the gun, with a spiral spring to return the piece to its firing bed. U. S. artillery batteries have six guns and a corps organization.

[1]Caissons of gun batteries as well as pieces are drawn by 6 horses each in all countries. [3]Figures in parentheses in this line give the number of caissons which, with the number of guns in line above, form a "fighting battery." [4]In this line, res.=reserve; bg.=baggage; pr.=provision; fo.=forage; ff.=field forage; st.=store; ob.=observation wagons; m.=medical; c.=cart; car.=carriage. [9]Approximate. [23]Austria-Hungary is experimenting with new artillery material. [24]Velocity and other data given are for shrapnel M. '96-96A. Initial velocity for shell M. '75 is 448 (1470), for steel shell M. '75, 502 (1647). [25]For shell M. '75 maximum range is 4500 (4920); for steel shell M. '75 it is 1125 (1230). [26]The 38 four-gun batteries with the corps artillery have the new 7.5-cm. guns, the 14 six-gun batteries with the independent cavalry have the old 8-cm. guns. [27]With cradle and recoil brake. [28]Reduced charges are .33 (.73) Nc. (nitrocellulose) +.01 (.022) blk. (black) and .22 (.48) Nc. +.01 (.022) blk. [30]Approximate. Fire tables not yet published. [31]Horse artillery same model as field, differing only in absence of gunner's seat. [27]With cradle, without equipment. [27]Without gun cradle. [28]Without equipment. [31]The English are experimenting with new artillery material. [32]Reduced charges are .252 (.555) Ng. (nitroglycerin powder), .179 (.395) Ng., and .107 (.236) Ng. [23]Lines 1 to 6 apply also to horse artillery, on which further data has not been published. [24]For old field gun and horse artillery gun, which form part of the present armament, see M. I. D. Notes, 1901. [25]Without load. [26]The load of 10th caisson is shell (number not known; the Patria says 96) and case shot (6 in limber). [27]The data given on this gun is from the Schweizerische Zeitschrift, which notes that the weights (lines 6, 7, 8, 9 and 11) are probably too low. [30]This number is for torpedo shell with full charge. For shrapnel it is 220 (722) with full charge, 170 (558) with half charge, 138 (453) with quarter charge. [31]This number is for shrapnel with full charge. For half charge it is 2150 (2351), for quarter charge 1200 (1859). [32]1.26+additional charge of .022 small arm powder. [28]Ng.=nitroglycerin; nc.=nitrocellulose.

Grand Prize of Rome.

The Grand Prix de Rome is a prize awarded by the French Government yearly for the best work in sculpture, painting, music and architecture. It is confined to French subjects over fifteen and under thirty years of age, and consists of four years of art study, three of which are spent at the Villa Medicis, at Rome, and the fourth in travelling through Italy and Greece, all expenses paid by the government. Candidates are selected by competitive examinations, conducted by the Ecole des Beaux Arts, under the direction of the Minister of Fine Arts. Those who pass the entrance examinations are placed "en loge" for six weeks. This means that the student is locked up for six weeks in a private studio, during which time he is not permitted to see any one or even talk to the servant. The only recreation permitted is a half hour's walk daily in the grounds. Food is given free of charge.

Republic of Panama.

On November 3 the inhabitants of the Department of Panama, United States of Colombia, declared their State an independent republic. A provisional government, consisting of three consuls and under officials, was established on the following day. The Colombian troops, sent to Colon and Panama in anticipation of such action, sided with the seceders, and offered no opposition to the new order. On the 4th these troops evacuated the isthmus without disturbance. The United States gunboat Nashville, then in the Gulf of Mexico, was ordered at once to Colon to watch American interests and to protect the trans-isthmian railroad, for which the United States is bound to care. A special meeting of the Cabinet of the United States was called, and as a result of the conference these United States vessels were ordered to the isthmus on both the gulf and Pacific sides: Marblehead, Concord, Wyoming, Boston, Atlanta, Dixie and the collier Hannibal. No serious disturbances were expected.

The provisional government of Panama, as organized November 4, was as follows: Consuls, Jose Augustin, Arango Tomas and Frederic Boyd; Commander of the Pacific Flotilla, General H. C. Jeffries; Commander of the Army, General Domingo Diaz; Assistant Secretary of Foreign Relations, Carlos Constantino Arosemena. It is rumored that F. Mutis Duran, ex-Governor of Panama, would be chosen the first President of the new Republic.

On November 6 the United States announced virtual recognition of the new Republic. Instructions were sent to Vice Consul General Ehrman at Panama directing him to enter into relationship with the de facto government as a responsible government of the territory, and to look to it for all due action to protect the interests of the United States, and to keep open the means of communication across the isthmus. Minister Beaupre at Bogota was instructed to transmit to the Government of Colombia the information that the United States was prepared to recognize Panama as an independent Republic and to recommend that the questions at issue between the two countries be peaceably and equitably settled.

It was reported on the same day that the sentiment in Europe was generally in favor of the revolution. The newspapers of England and France expressed sympathy with the United States. All seemed to think that the result would be the immediate construction of a trans-isthmian canal, under treaty with Panama, and the conferring of an inestimable boon on commerce.

Sentiment in Bogota was openly against the United States. It was believed there that the revolution had been planned, or at least fostered, by this country.

The Department of Panama has an area of 31,571 square miles, and a population of about 286,000. The capital is Panama, with a population of about 30,000.

The International Court of Arbitration.

The International Court of Arbitration is a permanent court which is supposed to be ready at any time to consider and arbitrate any international disputes which may be brought to its attention by the nations in interest. Twenty nations, including all the great maritime Powers, are parties to the treaty, the only countries not represented being Montenegro, Persia and Siam.

The organization of this permanent court was provided for by the International Arbitration Treaty which was adopted by the Universal Peace Conference in 1899. The leading and more important provisions were as follows:

Article 2.—In case of serious disagreement or conflict, before an appeal to arms the signatory Powers agree to have recourse, as far as circumstances allow, to the good offices of mediation of one or more friendly Powers.

Article 3.—With a view to obviating, as far as possible, recourse to force in the relations between States, the signatory Powers agree to use their best efforts to insure the pacific settlement of international differences.

Article 6.—Good offices and mediation, either at the request of the parties at variance, or on the initiative of Powers strangers to the dispute, have exclusively the character of advice and never have binding force.

Article 7.—The acceptance of mediation cannot unless there be an agreement to the contrary, have the effect of interrupting, delaying or hindering mobilization or other measures of preparation for war.

If mediation occurs after the commencement of hostilities it causes no interruption to the military operations in progress, unless there be an agreement to the contrary.

Article 15.—International arbitration has for its object the settlement of differences between States by judges of their own choice, and on the basis of respect for law.

Article 20.—With the object of facilitating an immediate recourse to arbitration for international differences, which it has not been possible to settle by diplomacy, the signatory Powers undertake to organize a permanent Court of Arbitration, accessible at all times, and operating, unless otherwise stipulated by the parties, in accordance with the rules of procedure inserted in the present convention.

Article 21.—The permanent court shall be competent for all arbitration cases, unless the parties agree to institute a special tribunal.

Article 22.—An international bureau, established at The Hague, serves as record office for the court.

This bureau is the channel for communications relative to the meetings of the court.

It has the custody of the archives and conducts all the administrative business.

The signatory Powers undertake to communicate to the international bureau at The Hague a duly certified copy of any conditions of arbitration arrived at between them, and of any award concerning them delivered by special tribunals.

They undertake also to communicate to the bureau the laws, regulations and documents eventually showing the execution of the awards given by the court.

Article 23.—Within three months following its ratification of the present act, each signatory Power shall select four persons at the most, of known competency in questions of international law, of the highest moral reputation, and disposed to accept the duties of arbitrators.

The persons thus selected shall be inscribed as members of the Court in a list which shall be notified by the bureau to all the signatory Powers.

Any alteration in the list of arbitrators is brought by the bureau to the knowledge of the signatory Powers.

Two or more Powers may agree on the selection in common of one or more members.

The same person can be selected by different Powers.

The members of the court are appointed for a term of six years. Their appointments can be renewed.

In case of the death or retirement of a member of the court, his place shall be filled in accordance with the method of his appointment.

Article 24.—When the signatory Powers desire to have recourse to the permanent court for the settlement of a difference that has arisen between them, the arbitrators called upon to form the competent tribunal to decide this difference must be chosen from the general list of members of the court.

Failing the direct agreement of the parties on the composition of the arbitration tribunal the following course shall be pursued:

Each party appoints two arbitrators, and these together choose an umpire.

If the votes are equal, the choice of the umpire is intrusted to a third Power, selected by the parties by common accord.

If an agreement is not arrived at on this subject, each party selects a different Power, and the choice of the umpire is made in concert by the Powers thus selected.

The tribunal being thus composed, the parties notify to the bureau their determination to have recourse to the court and the names of the arbitrators.

The tribunal of arbitration assembles on the date fixed by the parties.

The members of the court, in the discharge of their duties and out of their own country, enjoy diplomatic privileges and immunities.

Article 25.—The tribunal of arbitration has its ordinary seat at The Hague.

Except in cases of necessity, the place of session can only be altered by the tribunal with the assent of the parties.

Article 26.—The international bureau at The Hague is authorized to place its premises and its staff at the disposal of the signatory Powers for the operations of any special board of arbitration.

The jurisdiction of the permanent court may, within the conditions laid down in the regulations, be extended to disputes between non-signatory Powers, or between signatory Powers and non-signatory Powers, if the parties are agreed on recourse to this tribunal.

Article 27.—The signatory Powers consider it their duty, if a serious dispute threatens to break out between two or more of them, to remind these latter that the permanent court is open to them.

Consequently, they declare that the fact of reminding the conflicting parties of the provisions of the present convention, and the advice given to them, in the highest interests of peace, to have recourse to the permanent court, can only be regarded as friendly actions.

Article 28.—A permanent administrative council, composed of the diplomatic representatives of the signatory Powers accredited to The Hague and of the Netherlands Minister of Foreign Affairs, who will act as president, shall be instituted in that city as soon as possible after the ratification of the present act by at least nine Powers.

This council will be charged with the establishment and organization of the international bureau, which will be under its direction and control.

It will notify to the Powers the constitution of the court and will provide for its installation.

It will settle its rules of procedure and all other necessary regulations.

It will decide all questions of administration which may arise with regard to the operations of the court.

It will have entire control over the appointment, suspension or dismissal of the officials and employes of the bureau.

It will fix payments and salaries, and control the general expenditure.

At meetings duly summoned the presence of five members is sufficient to render valid the decisions of the council. The decisions are taken by a majority of votes.

The council communicates to the signatory Powers without delay the regulations adopted by it. It furnishes them with an annual report on the labors of the court, the working of the administration, and the expenses.

Article 29.—The expenses of the bureau shall be borne by the signatory Powers in the proportion fixed for the international bureau of the Universal Postal Union.

Article 30.—With a view to encouraging the development of arbitration the signatory Powers have agreed on the following rules, which shall be applicable to arbitral procedure, unless other rules have been agreed on by the parties:

Article 31.—The Powers who have recourse to arbitration sign a special act ("compromise"), in which the subject of the difference is clearly defined, as well as the extent of the arbitrators' powers. This act implies the undertaking of the parties to submit loyally to the award.

Article 32.—The duties of arbitrator may be conferred on one arbitrator alone or on several arbitrators selected by the parties, as they please, or chosen by them from the members of the permanent Court of Arbitration established by the present act.

Failing the constitution of the tribunal by difect

agreement between the parties, the following course shall be pursued:

Each party appoints two arbitrators, and these latter together choose an umpire.

In case of equal voting, the choice of the umpire is intrusted to a third Power, selected by the parties by common accord.

If no agreement is arrived at on this subject, each party selects a different Power, and the choice of the umpire is made in concert by the Powers thus selected.

Article 33.—When a sovereign or the chief of a State is chosen as arbitrator, the arbitral procedure is settled by him.

Administrative Council.—The administrative council of the permanent Court of Arbitration is composed of the Minister of Foreign Affairs of the Netherlands, and such diplomatic representatives as the ratifying Powers may have stationed at The Hague. The new secretary of the court is E. H. Strobel (American), ex-professor of international law at Harvard.

List of Members of the Permanent Hague Court.—The following roster of the permanent Court of Arbitration was furnished for The American Almanac for 1903 by the Department of State:

Austria-Hungary.—Count Frederic Schonborn, doctor of law; Count Albert Apponyi, member of the Chamber of Maynoles; Henry Lammach, doctor of law; Albert de Berzeviczy.

Belgium.—M. Beernaert, Minister of State; Baron Lambermont, Minister of State; Chevalier Descamps, Senator; M. Polydore de Paepe.

Bulgaria.—Stoyan Daneff, doctor of law; Dimitri Stancioff, doctor of law.

Denmark.—Professor H. Matzen, doctor of law.

France.—Leon Bourgeoise, President of the Chamber of Deputies; M. De Laboulaya, ex-Ambassador; Baron d'Estourvelles de Constant, Minister Plenipotentiary; Louis Renault, Minister Plenipotentiary.

Germany.—M. de Frantzius, counsellor; M. de Martitz, doctor of law; M. de Bar, doctor of law; E. F. Sieveking, Pres. Superior Court of Hamburg.

Great Britain.—Sir Edward Baldwin Malet, ex-Ambassador; Sir Edward Fry, doctor of law; Professor John Westlake, doctor of law; Major General Sir John Ardagh.

Greece.—Denys Stephanos, Deputy; George Streit, professor of law; Michel Kebedgy, professor of law.

Italy.—Count Constantin Nigra, doctor of law; Commander Jean Baptiste Pagano Guarnaschelli, doctor of law; Count Tornielli-Brusati di Vergani, doctor of law; Chevalier Joseph Zanardelli, doctor of law.

Japan.—I. Motono, Envoy Extraordinary; Henry Willard Denison, counsel of the Minister of Foreign Affairs at Tokio.

Mexico.—Manuel de Aspiroz, doctor of law; Jose M. Gamboa, doctor of law; Genan Raigosa, doctor of law; Alfred Chavero, doctor of law.

Netherlands.—T. M. C. Asser, doctor of law; F. B. Connick Liefsting, doctor of law; Joukheer A. F. de Savonini Lohman, doctor of law; Joukheer G. L. M. H. Ruys de Beerenbrouck, doctor of law.

Portugal.—Count de Macedo, peer of the realm; Antonio Emilio Comica de so Brandas, president of the High Court of Justice; Luiz Frederico de Bivas Gorne da Costa, peer of the realm.

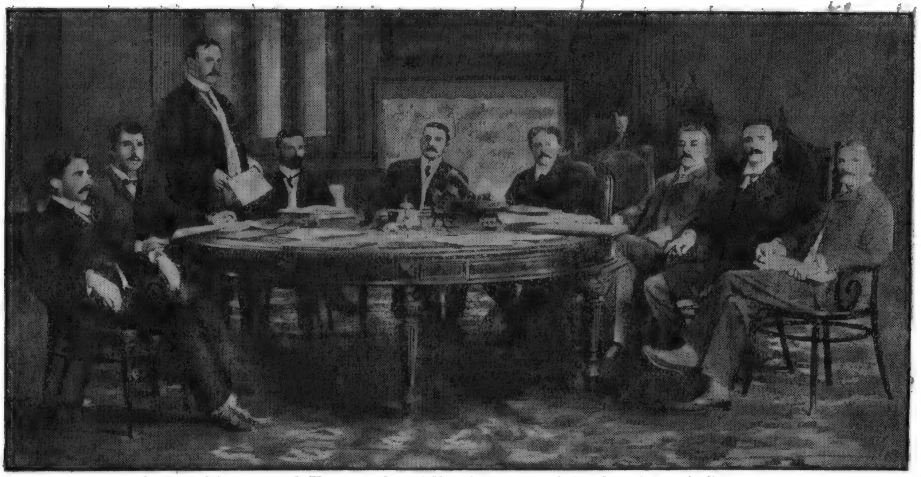
Roumania.—Theodore Rossetti, Senator; Jean Kalinderi, doctor of law; Eugene Statesco, president of the Senate; Jean N. Lahovari, ex-deputy.

Russia.—N. V. Muravieff, Minister of Justice; C. P. Pobedonostzew, Procurer-General; E. V. Frisch, president of the Department of Legislature; M. De Martens, privy counsellor.

Servia. — George Pavlovitch, ex-Minister; Glicha Geschitch, ex-Minister; Dr. Milovan Milovanovitch, Minister of Agriculture; Dr. Milenki Vesnitch, ex-Minister.

Siam.—Vacant.

Spain.—Rominuela F. Villaverde, ex-president of the Chamber of Deputies; Bienvenido Oliver, Director-General of the Ministry of Justice; Manuel Torres Campos, professor of law.



Sweden and Norway.—S. R. D. K. d'Olivicrona, doctor of law; M. G. Gram, ex-Minister of State of Norway; Samuel Ludwig Annerstedt; George Francis Hagerup.

Switzerland.—Charles Lardy, doctor of law; Charles Hilty, doctor of law; Emile Rott, doctor of law.

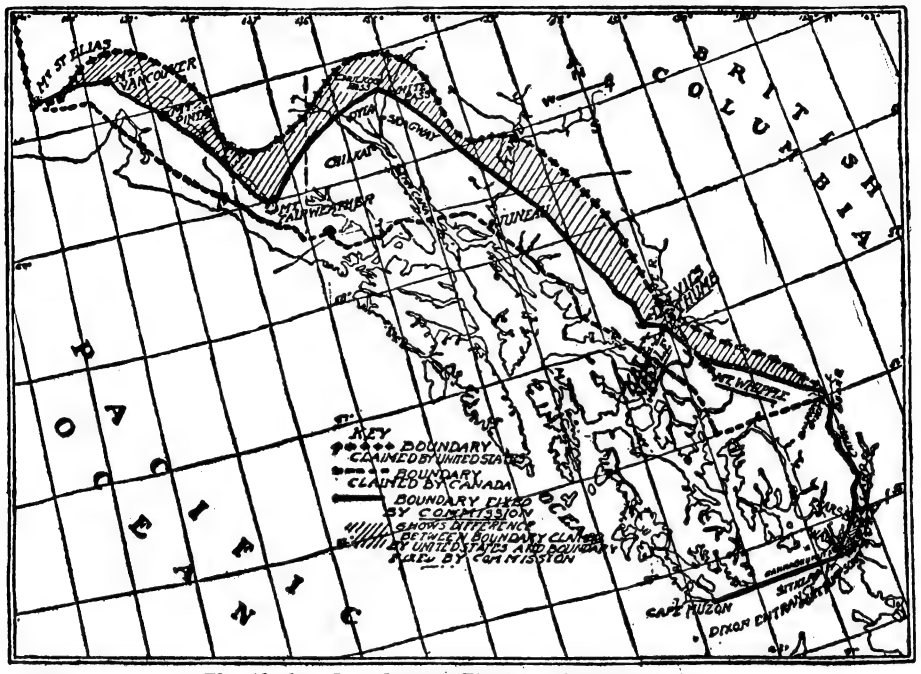
United States.—Hon. Melville W. Fuller, Chief Justice of the Supreme Court; Hon. John W. Griggs, ex-Attorney-General; Hon. George Gray, judge of the Circuit Court; Hon. Oscar L. Straus, ex-Minister to Turkey.

THE VENEZUELAN COMMISSIONS.

Ten mixed commissions, representing ten Governments, began sessions in Caracas, in June, to consider the adjustment of the claims of their various countries against Venezuela. Each commission consists of a citizen of the country it represents, a citizen of Venezuela, and, in case of disagreement, an umpire appointed by a disinterested Government. It happens that an American citizen is umpire in four of the commissions, a predominence due to the part played by Minister Bowen in bringing about this form of settlement.

United States and Venezuelan Mixed Tribunal in Session at Caracas.

The claimant countries are the United States, Spain, France, Great Britain, Netherlands, Germany, Italy, Mexico, Belgium and Sweden.



The sittings of these commissions are entirely distinct from the tribunal at The Hague appointed to consider the preferential claims of Germany, Great Britain and Italy.

W. W. Bainbridge was appointed United States Commissioner, to act with Dr. Jose de Paul, who was chosen representative for Venezuela. Harry Barge, of Holland, was appointed by Queen Wilhelmina to act as umpire. The other members of this particular commission are W. A. Fitzsimmons, secretary to Commissioner Bainbridge; R. Dolge, secretary to the Commission; Robert C. Morris, United States agent; Mr. Doyle, secretary to the United States agent; Padron Uztariz, secretary of the Venezuelan Commission, and Dr. Arroyo, Venezuelan agent.

The largest of the American claims was a demand of the Orinoco Steamboat Company for $1,200,000 for

services rendered in transporting Government officials, troops and freight, and also for damages incurred by the seizure, detention and destruction of some of its boats during the revolution. Other claims were of a miscellaneous character, such as the running off of cattle from American ranches, interference with mines owned by Americans and failure to pay interest on bonds. Two women presented claims on account of loss of their husbands in certain Venezuelan revolutions. Some of the American claims run back nearly fifty years, and are declared by Venezuela to be outlawed on account of a protocol signed in 1868 which established a mixed commission to hear claims pending between the United States and Venezuela. A provision specified that all claims not submitted to the commission within one year from that date would thereby lapse.

Consideration of the claims has been necessarily slow, but has proceeded without notable friction. By the protocols commissions are directed to complete their work within six months from June 1.

The Alaskan Boundary as Fixed by the Commission.

THE ALASKAN BOUNDARY DECISION.

The Alaskan Boundary Commission, sitting at London, reached an agreement on October 17, whereby all the American claims were sustained, except those in relation to the Portland Canal, in which Canada won.

The main point in the dispute between the United States and the Dominion of Canada turned on the question whether the thirty marine leagues mentioned in the Anglo-Russian treaty of 1825 were to be reckoned from the outer littoral of the outlying islands, or from the sinuous coast line of the mainland. By the decision of the commission, to which Messrs. Aylesworth and Lette, the Canadian Commissioners, refused to subscribe, the latter construction was taken, barring Canada from communication with the Pacific save at and near the southern terminus of the boundary, where the commission gave her Pearse and Wales islands, at the juncture of Observatory Inlet and Portland Canal. These islands have a strategic value with reference to Port Simpson, which is to be the Pacific terminus of the trans-Canadian railroad, and to Nasoga Harbor, from which the British Columbia, Northern & McKenzie Valley Railroad has been projected to run through Canadian territory to Dawson City and beyond.

Had it not been for the liberal-mindedness of Lord Alverstone, the third British member of the commission, there would have been no decision reached; nor, in fact, would there have been a mixed tribunal formed of Americans and British only.

Canadian newspapers claimed that there was unanimous dissatisfaction throughout the Dominion at the action of the British Government in the matter of the decision. The Halifax Chronicle, in an editorial published on October 28, said that there were but two courses open to Canada—complete legislative independence within the empire, acknowledging the sovereignty of the King of England alone, or the status of an independent nation. This paper said there was much in favor of the latter step in particular, as it would free Canada from the danger of ever becoming embroiled with the United States on account of its European connection, and at the same time would secure for the Dominion the benefit of the protection of the Monroe Doctrine.

The decision of the commission is not legally binding until it has been embodied in a treaty which, like other treaties, will have to be ratified by both countries concerned.

Bureau of the American Republics.

The Bureau of the American Republics was organized as a result of the first international conference of the American Republics, held April 14, 1890, and is to disseminate knowledge regarding each Republic represented. Especial attention is paid to industrial and commercial lines, with the view of increasing interest in the Republics and to bringing about better relations. In March, 1902, a reorganization of the bureau took place at a meeting held in Washington, and several resolutions as to its policy were adopted. The bureau is under the control of a governing board, composed of the diplomatic representatives of all the Governments of the Republics accredited to the Government of the United States and of the Secretary of State of the United States, who is chairman of the governing board. Applicants for membership to the bureau must pass an examination provided by a committee from the board. It was agreed to continue the publication of the monthly bulletin, and decided that as soon as the advertising contracts then existing expired the publication of advertisements in the bulletin should cease.

Meaning of abbreviations: V., Voluntary; Co., Compulsory; C., Conscription; I. L., Irregular levies.

NOTES.—*Estimated. †Including India. ‡Conscription system not yet in operation. ‖Montenegro has no regular standing army, but all inhabitants not physically unfit for service are compelled to train as soldiers and are liable to call in case of necessity. §The Shah has decreed that the army shall be raised by conscription, but this decree has never been enforced. [1]Based on budget estimate. [2]Battallions. [3]Companies. [4]The army has no unity, and there is little discipline. The weapons in use are obsolete. [5]Brigade. [6]Column. [7]Divided as follows: Regular army, 359,994; irregular army, 604,419; Indian army, 214,729; colonial forces, 97,306. [8]Every able-bodied male inhabitant liable. [9]Divided between various branches of the service, as the active army, the reserve, the territorial army and the territorial reserve. [10]The army is in an extremely crude condition, and the main dependence of the nation is placed upon its more modern marine infantry. [11]Batteries. [12]Squadrons. [13]By a law of 1901 the regular army can consist of not more than 100,000. In time of war the United States can raise an army of 10,845,268. [14]Corps. [15]Divisions. [16]Does not include field artillery. The general plan of seacoast defence is about half finished, and will require about fifteen years for its completion. The entire cost of the plan now being carried out will be about $100,000,000.
